

**UNIVERSITY OF LONDON
INSTITUTE OF PSYCHIATRY**

**Training Course in
Cognitive Behavioural Therapy**

There will be a training course in Cognitive Behavioural Therapy at the Institute of Psychiatry between 19 January and 27 July 1990. The course starts with a two-day workshop on 12 January and 13 January, and thereafter every Friday morning between 9.30 am and 1.00 pm.

Students will be expected to treat patients under supervision, and will attend a series of academic seminars. Psychiatrists and post-qualification psychologists are likely to be particularly interested, though applicants from other professional disciplines will be considered.

Numbers will be limited.

For further details apply to:

**The Registry, Institute of Psychiatry, De Crespigny Park,
Denmark Hill, London SE5 8AF.**

Closing date for applications: 15th December 1989.

**GENES, CULTURE AND
PERSONALITY**
An Empirical Approach

L.J. Eaves, H.J. Eysenck, and N.G. Martin,

June 1989, 470 pages, ISBN: 0.12.228290.6, £32.50

The diversity of human behaviour is one of the most fascinating aspects of human biology. What makes our individual attitudes, lifestyle and personalities different has been the subject of many physiological and psychological theories. In this book the emphasis is on understanding the genetic and environmental causes of these differences. *Genes, Culture and Personality* is an expansive account of the state of current knowledge about the causes of individual differences in personality and social attitudes. Based on almost two decades of empirical research, the authors have made a significant contribution to the debate on genetic and cultural inheritance in human behaviour. The book should be required reading for psychologists, psychiatrists, sociobiologists and geneticists.

CONTENTS: Another Book on Heritability? Dimensions of Personality. The Classical Approach: Early Twin Studies of Personality. Introduction to Model Fitting. Adult Twin Studies of the Major Personality Dimensions. Further Tests of the Model: Studies of Adoptees and Extended Families. Personality Development and Change: A Genetic Perspective. The Genetic Analysis of Individual EPQ Items, The Specificity of Gene Effects: Implications for the Interaction of Persons and Situations. Genetic and Environmental Covariance Between Traits. Normal Personality and Symptoms of Psychiatric Disorder: A Genetic Relationship? Social Attitudes: A Model of Cultural Inheritance? Conservatism-Radicalism: The Structure of Social Attitudes. Twin Studies of Social-Attitude Dimensions. Attitudes: Cultural Inheritance or Assortive Mating? Testing Assumptions About Mate Selection. *Genes, Culture, and Behavior*. Appendices, References, Subject Index

BOOK MARKETING DEPARTMENT, 1250 SIXTH AVENUE, SAN DIEGO, CA 92101-4211, U.S.A.

1. **Submission.** Articles written in English and not submitted for publication elsewhere, should be sent to The Editors, *Behavioural Psychotherapy*, Department of Psychiatry, University of Oxford, Warneford Hospital, Oxford OX3 7JX, U.K.

2. **Manuscript preparation.** Four complete copies of the manuscript must be submitted. Original figures should be supplied at the time of submission. Articles must be typed double-spaced throughout on standard sized paper (preferably A4) allowing wide margins all round. Where unpublished material, e.g. behaviour rating scales, therapy manuals, etc is referred to in an article, copies should be submitted to facilitate review.

Manuscripts will be sent out for review exactly as submitted. Authors who want a blind review should mark two copies of their article "review copy" omitting from these copies details of authorship.

Abbreviations where used must be standard. The *Système Internationale* (SI) should be used for all units; where metric units are used the SI equivalent must also be given. Probability values and power statistics should be given with statistic values and degrees of freedom [e.g. $F(1,34) = 123.07, P < 0.001$], but such information should preferably be included in tables rather than the main text.

Spelling must be consistent within an article, either using British usage (*The Shorter Oxford English Dictionary*), or American usage (*Webster's New Collegiate Dictionary*). However, spelling in the list of references must be literal to each original publication.

Details of style not specified here may be determined by reference to the *Publication Manual of the American Psychological Association*.

Articles should conform to the following scheme:

- (a) *Title page.* The title should phrase concisely the major issues. Author(s) to be given with departmental affiliations and addresses, grouped appropriately. A running head of no more than 40 characters should be indicated.
- (b) *Summary.* This should summarize the article in no more than 200 words.
- (c) *Text.* This should begin with an introduction, succinctly introducing the point of the paper to those interested in the general area of the journal. References within the text should be given in the form Jones and Smith (1973). When there are three or more authors the first citation should include all authors, subsequent citations should be given as Williams *et al.* (1973). Authors with the same surname should be distinguished by their initials. The approximate positions of tables and figures should be indicated in the text. Footnotes should be avoided where possible.
- (d) *Reference notes.* A list of all cited unpublished or limited circulation material, numbered in order of appearance in the text, giving as much information as possible about extant manuscripts.
- (e) *References.* All citations in the text should be listed in strict alphabetical order according to surnames. Multiple references to the same author(s) should be listed chronologically, using a, b, etc., for entries within the same year. Formats for journal articles, books and chapters should follow these examples:

BECKER, M. R. and GREEN, L. W. (1975). A family approach to compliance with medical treatment: A selective review of the literature. *International Journal of Health Education* 18, 173–182.

THORP, R. G. and WETZEL, R. J. (1969). *Behaviour Modification in the Natural Environment*. New York: Academic Press.

ROSKIES, E. and LAZARUS, R. S. (1980). Coping theory and the teaching of coping skills. In *Behavioural Medicine: Changing Health Lifestyles*, P. O. Davidson and S. M. Davidson (Eds), New York: Brunner/Mazel.

- (f) *Footnotes.* The first, and preferably only, footnote will appear at the foot of the first page of each article, and subsequently may acknowledge previous unpublished presentation (e.g. dissertation, meeting paper) financial support, scholarly or technical assistance, or a change in affiliation. Its concluding (or only) paragraph must be the name and full mailing address of the author to whom reprint requests or other inquiries should be sent.
- (g) *Tables.* Tables should be numbered and given explanatory titles.
- (h) *Figure captions.* Numbered captions should be typed on a separate page.
- (i) *Figures.* Original drawings or prints must be submitted for each line or half-tone illustration. Figures should be clearly labelled.

3. **Proofs, Reprints and Copyright.** Proofs of accepted articles will be sent to authors for the correction of printers' errors; author's alterations may be charged. Authors submitting a manuscript do so on the understanding that if it is accepted for publication exclusive copyright of the paper shall be assigned to the Society. In consideration of the assignment of copyright, 25 copies of each paper will be supplied. Further reprints may be ordered at extra cost; the copyright assignment form and the reprint order form will be sent with the proofs. The publishers will not put any limitation on the personal freedom of the author to use
