

Subscription rates

Subscription rates for volume 41 (2004) of *Journal of Applied Probability (JAP)* are as follows (post free and including online access at <http://projecteuclid.org/jap/>): US\$240.00; A\$390.00; £150.00 for libraries and institutions; or US\$80.00; A\$130.00; £50.00 for individuals belonging to a recognised scientific society. The subscription rates for volume 36 (2004) of *Advances in Applied Probability*, the companion publication, are the same; if both journals are ordered directly from the Applied Probability office at the same time, the combined price is discounted by 10%. Please send all enquiries to: Applied Probability Subscriptions, School of Mathematics and Statistics, University of Sheffield, Sheffield S3 7RH, UK (telephone +44 114 222 3922; fax +44 114 272 9782; email s.c.boyles@sheffield.ac.uk). Cheques, money orders, etc. should be made payable to 'Applied Probability'. Payment is acceptable in US, Australian or UK currency, or by Visa or Mastercard. We can provide back issue prices on application.

Notes for contributors

Papers published in *Journal of Applied Probability (JAP)* may be either: (i) *research papers* not exceeding 20 printed pages; or (ii) *short communications* of a few printed pages in the nature of notes or brief accounts of work in progress. *Letters* relating specifically to papers that have appeared in *JAP* will also be published there. *Review papers*, *longer research papers*, *letters to the Editor* and papers in *stochastic geometry and statistical applications* are published in *Advances in Applied Probability*, the companion publication.

It is the policy not to accept for publication papers that cannot appear in print within 15 months of the date of receipt of the final version. In order to meet this deadline, an accepted paper may be published in either journal, according to the space available.

Fifty offprints of each paper will be provided free, with additional offprints available at cost.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Papers should be written in English or French; papers in other languages may be accepted, but will appear (subject to the author's agreement) in English or French translation.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; (iii) a list of **classifications**, using the 2000 Mathematics Subject Classification scheme (<http://www.ams.org/msc/>). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the LATEX class file `aptpub.cls`, available from <http://www.appliedprobability.org/>. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted as hard copy or as electronic files (with hard copy back-up). All submissions will be acknowledged on receipt and **must be accompanied by a covering letter stating the author's postal address and affiliation**. Hard copy: Send all submissions to the Applied Probability office in Sheffield, and not to individual editors. Three copies of the paper, at least one of which should be double spaced, should be sent to: **Executive Editor, Applied Probability, School of Mathematics and Statistics, University of Sheffield, Sheffield S3 7RH, UK**. Electronic submission: Please email a **double-spaced** PostScript™ (.ps) or portable document format (.pdf) file, not exceeding 1 Mb. **The files must be clearly identified by name in a separate covering message**. The address for email submissions is l.nash@sheffield.ac.uk. Authors should also submit three hard copies, as above.

Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the base fee of \$0.70 per copy plus 0.20 per page is paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA (<http://www.copyright.com>). 0021-9002/04 \$0.70 + 0.20.

Research Papers

- 939 EMILIO DE SANTIS AND FABIO SPIZZICHINO. Change-point models and conditionally pure birth processes: an inequality on the stochastic intensity
- 953 JORDAN STOYANOV AND M. H. M. AL-SADI. Properties of classes of life distribution based on the conditional variance
- 961 FÉLIX BELZUNCE AND PATRIZIA SEMERARO. Preservation of positive and negative orthant dependence concepts under mixtures and applications
- 975 JOHN L. SPOUGE. Path reversal, islands, and the gapped alignment of random sequences
- 984 ZHAO DONG AND SHUI FENG. Occupation time processes of super-Brownian motion with cut-off branching
- 998 PIETER ALLAART. Stopping the maximum of a correlated random walk, with cost for observation
- 1008 NILANJANA DATTA AND TONY C. DORLAS. Random walks on a complete graph: a model for infection
- 1022 YONG-HUA MAO AND YU-HUI ZHANG. Exponential ergodicity for single-birth processes
- 1033 ANYUE CHEN, PHIL POLLETT, HANJUN ZHANG AND JUNPING LI. The collision branching process
- 1049 P. BARRIEU, A. ROUAULT AND M. YOR. A study of the Hartman–Watson distribution motivated by numerical problems related to the pricing of Asian options
- 1059 D. PERRY, W. STADJE AND S. ZACKS. The first rendezvous time of Brownian motion and compound Poisson-type processes
- 1071 YONG-HUA MAO. The eigentime identity for continuous-time ergodic Markov chains
- 1081 P. VELLAISAMY. Poisson approximation for (k_1, k_2) -events via the Stein–Chen method
- 1093 CHUNSHENG MA. The use of the variogram in construction of stationary time series models
- 1104 PETER MATHÉ. Numerical integration using V -uniformly ergodic Markov chains
- 1113 ZHENGJUN ZHANG AND RICHARD L. SMITH. The behavior of multivariate maxima of moving maxima processes
- 1124 MARCEL F. NEUTS AND ATTAHIRU SULE ALFA. Pair formation in a Markovian arrival process with two event labels
- 1138 K. BOROVKOV. On pair and tuple formation under independent Poisson or renewal arrival processes
- 1145 PARIJAT DUBE, FABRICE GUILLEMIN AND RAVI R. MAZUMDAR. Scale functions of Lévy processes and busy periods of finite-capacity $M/GI/1$ queues
- 1157 YIJUN ZHU AND ZHE GEORGE ZHANG. $M/GI/1$ queues with services of both positive and negative customers
- 1171 M. VLASIOU, I. J. B. F. ADAN AND J. WESSELS. A Lindley-type equation arising from a carousel problem

Short Communications

- 1182 I. M. MACPHEE, JONATHAN ROUGIER AND G. H. POLLARD. Server advantage in tennis matches
- 1187 ALEKSANDER M. IKSANOV. Infinite divisibility of infinite sums of lower records: a simple proof
- 1191 XIAOWEN ZHOU. Some fluctuation identities for Lévy processes with jumps of the same sign
- 1199 JAN VEČER AND MINGXIN XU. The mean comparison theorem cannot be extended to the Poisson case
- 1203 ÉLISE JANVRESSE AND THIERRY DE LA RUE. From uniform distributions to Benford's law
- 1211 BEN CAIRNS AND P. K. POLLETT. Extinction times for a general birth, death and catastrophe process
- 1219 A. YU. MITROPHANOV. The spectral gap and perturbation bounds for reversible continuous-time Markov chains
- 1223 PETER MÖRTERS AND NARN-RUEIH SHIEH. On the multifractal spectrum of the branching measure on a Galton–Watson tree
- 1230 S. N. ETHIER. The Kelly system maximizes median fortune
- 1237 OFFER KELLA AND WOLFGANG STADJE. A Brownian motion with two reflecting barriers and Markov-modulated speed

Letter to the Editor

- 1243 MANUEL CABRAL MORAIS AND ANTÓNIO PACHECO. A note on the ageing character of the run length of Markov-type quality-control schemes
- 1248 Correction
- 1250 Index
