Outstanding McGraw-Hill Texts

FOUNDATIONS OF MATHEMATICAL LOGIC

By HASKELL CURRY, The Pennsylvania State University. ***McGraw-Hill series in Higher Mathematics.*** 420 pages, $12.50.

Provides a through discussion of the constructive theory of the first order predicate calculus, a fundamental part of mathematical logic for advanced courses. The book is thoroughly documented and contains copious references for supplementary purposes.

SYMBOLIC LOGIC AND LANGUAGE: A PROGRAMMED TEXT

By JAMES DICKOFF and PATRICIA JAMES, both of Yale University. 288 pages, $6.95, clothbound. *Soft-cover Text Edition available for classroom* adoption $4.95.

Develops a formal system of sentential logic using the natural deduction procedures similiar to those of Professor Fitch' "subordination-proof method." Shows the system's relationship to language analysis and problem solving.

THE LOGIC OF DECISION

By RICHARD C. JEFFREY, City University of New York.

McGraw-Hill Series in Probability and Statistics. 232 pages, $7.95.
This upper-division text presents a new approach to the foundations of decision theory, from a Bayesian point of view.

FUNDAMENTALS OF LOGIC

By DANIEL J. SULLIVAN, Fordham University. 280 pages, $4.95.

Designed for a one semester course for students without previous training in logic or philosophy. Includes a minimum of philosophical notion which will enable the student to attain a working knowledge of the subject.

THE ELEMENTS OF LOGIC

By STEPHEN F. BARKER, Ohio State University. 336 pages, $5.95.

A concise and imaginative text written by an outstanding young mathematical logician. Covers both the traditional logic of the syllogism and the modern symbolic logic of truth functions and quantification.

ELECTRONIC DATA PROCESSING

By GORDON B. DAVIS, University of Minnesota. 540 pages, $9.75.

A general introduction to the field of computers, this book is not tied to any specific or hypothetical computer, but discusses all important developments in the field. Specifics about a *particular machine appear in the accompanying* manual designed for that machine.

THEORY OF RECURSIVE FUNCTIONS AND EFFECTIVE COMPUTABILITY

By HARTLEY ROGERS, Jr., Jr., Massachusetts Institute of Technology. International Series in Pure and Applied Mathematics.

An outstanding mathematical logician offers this *semi-formal, intuitive* approach to recursive functions. More than threequarters of the material appears here for the first time in book form. A brief summary of early work in the field is included in the first two chapters.

PRIMARY PHILOSOPHY

By MICHAEL SCRIVEN, Indiana University. Available in April.

Here is a systematic contemporary treatment of the inescapable philosophical problems. It provides a continuous coherent account in terms of which the instructor can introduce the historical alternatives or build his own treatment. The material is based on teaching and lecturing experience on about a hundred American campuses and discusses the questions and answers with which most students are concerned.

ASPECTS OF SCIENTIFIC EXPLANATION

AND OTHER ESSAYS IN THE PHILOSOPHY OF SCIENCE

by Carl G. Hempel, *Princeton University*

Here, in one volume, is a collection of distinguished studies, essays that demonstrate the imaginative insight and the ability for rigorous analysis that have made Carl G. Hempel one of the most noted contemporary philosophers. The essays deal with four central groups of problems in the philosophy of science: *confirmation, induction, and rational belief; conceptions of cognitive significance; structure and function of scientific concepts and theories; and scientific explanation.* Written especially for this volume, the extended title essay explores the pragmatic-psychological and the systematic-logical aspects of explanation in the natural and the social sciences and in historiography. The eleven earlier essays have been revised and annotated for this edition, and to some of them the author has added a postscript on recent contributions to the basic problems involved. Essential reading for those interested in the philosophy and methodology of the sciences — social *and* natural. $ 12.50

Two Additional Distinguished Works

AN INTRODUCTION TO THE PHILOSOPHY OF SCIENCE by Arthur Pap

A systematic discussion of all the main philosophical problems raised by the methods and results of the physical and social sciences. The philosophical problems discussed in this book are not the exclusive concern of professional philosophers but of all reflective scientists. "Even a cursory glance at the book... reveals its comprehensiveness and its tightly woven logical pattern... a careful study of the text is an enriching experience." — *The Personalist* $ 7.95

THE CRITICAL APPROACH TO SCIENCE AND PHILOSOPHY Edited by Mario Bunge, *Temple University*

In Honor of Karl R. Popper. Twenty-nine world-famous scientists, philosophers, and social scientists pay tribute to the work of Karl R. Popper. Among the contributors are David Bohm, O. R. Frisch, John C. Eccles, Haskell B. Curry, and Ernst Gombrich. The essays are grouped under four section headings: philosophy; logic and mathematics; science; and society and history. The unity of the various fields of rational inquiry, and the undogmatic critical attitude are stressed. $ 9.95

ELEMENTARY LOGIC

Revised Edition

By WILLARD VAN ORMAN QUINE

Thoroughly revised, simpler and yet more rigorous than many larger texts, this book encapsulates minimum essentials. It deals with the paraphrasing of words into symbols, the testing of truth-function logic and proof for the logic of quantifiers. $ 3.50

MATHEMATICAL LOGIC

Revised Edition

By WILLARD VAN ORMAN QUINE

"This revised edition of the author's well-known *Mathematical Logic* presents an elegant emendation of the system that appeared under the same title in previous printings." – *The Journal of Symbolic Logic.* "Can be recommended either as a text or as a reference book." – *Bulletin of the American Mathematical Society.* Fifth printing. $ 5.50

Ways of Thought of Great Mathematicians
by Herbert Meschkowski, Paedagogische Hochschule Berlin

A lively collection of examples of the creative thinking of great mathematicians down through the ages, including: The Pythagoreans, Archimedes, Nicholas of Cusa, Blaise Pascal, Leibniz, Gauss, George Boole, Weierstrass, and Georg Cantor. A history of mathematics of interest not only to the mathematician and the student of mathematics, but to the layman as well.
$4.95 (cloth) $2.95 (paper)

Evolution in Mathematical Thought
by Herbert Meschkowski, Paedagogische Hochschule Berlin

An elementary historical introduction to the foundations of mathematics written for students and for the wider circle of those who are interested in philosophical and pedagogical implications of modern mathematics. The book will provide a suitable text for a general cultural course in mathematics, or for courses in the history or foundations of mathematics.
$4.95 (cloth) $2.95 (paper)

Logic: A Dialogue *by Arthur K. Bierman, San Francisco State College*

An introductory text written in dialogue style and based on the inductive method of teaching logic. Designed primarily for a one-semester course for freshmen, sophomores, and juniors. May also be used as an introduction to the philosophy of language and meaning for juniors and seniors by stressing relevant portions of the text and the calculus of concepts. **$7.95**

THE ART OF CRITICAL THINKING

Troy Wilson Organ

In this text logic is introduced as an essential problem-solving tool in all realms of life from practical everyday dilemmas to the intellectual puzzles of specialists. The straight forward style emphasizes methodology rather than symbols or principles, while the exerclises following the sections illustrate the concrete applications of logic.

300 pages **1965** **Paper** **$2.95**

RELIABLE KNOWLEDGE, Revised Edition

Scientific Methods in the Social Studies

Harold A. Larrabee

Grounded in inductive logic, this book has the practical aim of aiding those who seek dependable knowledge in the improvement of their methods of inquiry. This revised edition includes a section on modern logic with attention to computers, electronic deduction, the theory of sets, and the theory of games. Materials for class discussion, illustrations, and exercises are available.

409 pages **1964** **Paper** **$3.95**

THE JOURNAL OF SYMBOLIC LOGIC

EDITORS: A. Church, A. A. Lazerowitz, J. Robinson, A. N. Prior, H. Rogers, Jr.

A quarterly devoted to research papers, expository articles of high level, and reviews in the field of modern mathematical logic and allied fields:

- **Formal Logic**
- **Recursive Functions**
- **Axiomatics**
- **Boolean Algebra**
- **Algebraic Logic**
- **Semantics**
- **History of Logic**
- **Intuitionistic Logic**
- **Goedel Theory**
- **Foundations of Mathematics**
- **Computability**
- **Modal Logic**
- **Simplifying Truth-functions**
- **Probability and Inductive Logic**
- **Theory of Models**
- **Theory of Sets**
- **Logical Analysis of Language**
- **Metamathematics**

The REVIEWS section of the JOURNAL constitutes a *complete*, critical coverage of the field.

Membership (includes subscription) $6.50 per annum
Back numbers: $11.00 per volume ($9.00 for Volumes 1-12)

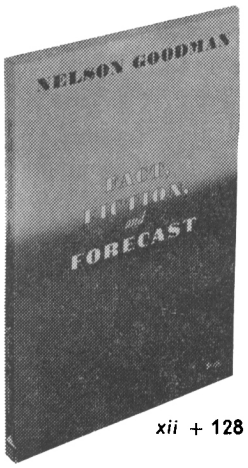
NELSON GOODMAN

* * * * *TITLES* * * * *



FACT, FICTION and FORECAST

"Nelson Goodman, one of the most original and acute epistemologists of the present time, deals in his work *Fact, Fiction and Forecast* with a series of important epistemological questions, especially the problem of induction, from an entirely new point of view. Perhaps one might say more precisely that Goodman exposes a series of problems which up to now have been either hardly noticed or else grossly underrated, and at the same time provides ways and means for disposing of them.

To American members of the Association for Symbolic Logic

HAVE YOU COMPLETED THE QUESTIONNAIRE OF THE MATHEMATICS AND THE STATISTICS SECTION OF THE NATIONAL REGISTER OF SCIENTIFIC AND TECHNICAL PERSONNEL?

On behalf of the Association for Symbolic Logic and various mathematical organizations the American Mathematical Society assembles and maintains a register of mathematicians, statisticians, and mathematical scientists. The mathematics register is a section of the National Register of Scientific and Technical Personnel, which is an official responsibility of the National Science Foundation.

The main objective of the Register is to provide up-to-date information on the scientific manpower resources of the United States. It is also increasingly valuable to the scientific community as a source of statistical information.

At the request of the National Science Foundation, the American Mathematical Society will mail the 1966 reporting forms to its section in the National Register. It is hoped again to obtain the fine cooperation accorded the previous cycle of the Register by most of the mathematicians and mathematical scientists.

If you receive a National Register questionnaire from the American Mathematical Society, you are urged to fill it in now and send it to the Headquarters Offices of the Society at P. O. Box 6248, Providence, Rhode Island 02904.

If you have never received a questionnaire and believe you may be qualified for inclusion in the Register, please send a note to that effect to the above address.

NORTH-HOLLAND BOOKS

A TRANSFINITE TYPE THEORY WITH TYPE VARIABLES

By P. B. ANDREWS, Carnegie Institute of Technology, Pittsburgh, Pa.

This book presents the first demonstrably consistent logistic system which is really adequate for the complete and natural formalization of scientific theories involving the use of mathematics, while avoiding an axiom of infinity and other features which might be incompatible with the scientific theories.

6 × 9″ 160 pp. *f.* 22.00 (40s.; $5.60)

LOGIC, METHODOLOGY AND PHILOSOPHY OF SCIENCE

Proceedings of the 1964 International Conference, Jerusalem, August 26-September 2

Editor: Y. BAR-HILLEL, The Hebrew University of Jerusalem

The papers published here are the texts, at time considerably expanded and revised, of the studies presented at this Congress. They fall in one of two categories: invited addresses and contributions to symposia.

A Theory of Sets

by **Anthony P. Morse**

A volume of *Pure and Applied Mathematics*

A formalization which could be used without change to build just about any given mathematical structure . . . plus a unified account of logic and set theory. Among the novelties are: the indication that set theory can be used to explore logic, a strong and useful theorem of classification, a very general induction theorem, a powerful maximal principle, and a rather natural but far reaching direct extension theorem.

(M 872) 1965, 130pp., $ 7.95

Mathematical Theory of Probability and Statistics

by **Richard Von Mises**

Edited and complemented by **Hilda Geiringer**

Presents a unified mathematical theory of the basic elements of probability and statistics, developed for use by both the mathematician and the scientist.

(V 830) 1964, 694 pp., $ 22.00

Digital Computer Design Logic, Circuitry, and Synthesis

by **Edward L. Braun**

"This is a book which should be in the library of every electronic research establishment."
Electronic Engineering

". . . provides the reader with a very good one-volume reference to the field of digital computing.
ACM Computing Reviews"

(B 710) 1963, 606 pp., $ 18.50

Theory of Graphs and Its Applications

edited by **Miroslav Fiedler**

Co-published with the Czechoslovak Academy of Sciences

(F 480) 1964, 234 pp., $ 10.00

Scientific Uncertainty, and Information

by **Leon Brillouin**

A reappraisal of the philosophical foundation of science. Describes the dramatic expansion undergone by physics and other experimental sciences in this century, and shows how new discoveries have led to a profound transformation of scientific theories.

(B 780) 1964, 164 pp., $ 6.50

Information and Prediction in Science

Symposium of the Academie Internationale de Philosophie des Sciences

Edited by **S. Dockx** and **P. Bernays**

Deals with the role of information in different scientific disciplines. Covers the relationship between information theory and the theory of knowledge and the analogies existing between the structures of information theory and physical and biological structures.

CONTENTS: Information Theory. Logic and Information. Mathematics and Information. Physics and Information. Biology and Information. Human Sciences. *Author Index.*

(D 630) 1965, 272 pp., $ 9.50

SECOND EDITION

Boolean Algebras

by **Roman Sikorski**

Contains a systematic study of Boolean algebras, examining them from the point of view of finite Boolean operations only, and discusses infinite Boolean operations in mathematical literature. Chapters are illustrated by many examples.

A Springer-Verlag title published in the United States and Canada by Academic Press at identical list price.

(S 294) 1964, 237 pp., $ 9.50
