THE BURGESS
HISTORY OF WESTERN EDUCATION SERIES

NOBILITY, TRAGEDY, AND NATURALISM

Education in Ancient Greece

Edited by J. J. Chambliss, Rutgers University

One of the enduring contributions of the Greeks to the history of education is the development of a way of thinking about education. The Greeks created a literature of educational thinking that articulated the relationship between the ideal of human excellence and the process by which this ideal might be attained in reality. In this first book of readings in the Burgess History of Western Education Series, Greek writings, from Homer to Aristotle, which pertain to the development of educational thought, are combined with selected current articles by Werner Jaeger, Giambattista Vico, and H. I. Marrou. Included are sensitive translations of works by Pindar, Aeschylus, Sophocles, Euripides, Thucydides, Aristophanes, Plato, Isocrates, and Aristotle. (*Ready in January.*)

Specifications: 1971; 6 x 9"; 222 pp.; \$2.95. Order from Department HE1 or write on your letterhead for a complimentary copy for adoption consideration.
