# Physics

Books and Journals from  
Cambridge University Press

Cambridge University Press is a leading publisher of textbooks, handbooks and monographs that span all areas of physics, from condensed matter physics, to theoretical and mathematical physics.

We also publish a key cluster of journals including the *Journal of Plasma Physics*, *Journal of Fluid Mechanics*, and *High Power Laser Science and Engineering*.

CAMBRIDGE  
UNIVERSITY PRESS

- S 599 Spatial–spectral characteristics of momentum transport in a turbulent boundary layer  
**D. Fiscaletti, R. de Kat & B. Ganapathisubramani**
- 635 Experimental investigation of torque hysteresis behaviour of Taylor–Couette Flow  
**M. Gul, G. E. Elsinga & J. Westerweel**
- 649 Transient effects in the translation of bubbles insonated with acoustic pulses of finite duration  
**E. Igualada-Villodre, A. Medina-Palomo, P. Vega-Martínez & J. Rodríguez-Rodríguez**
- S 694 Non-equilibrium pair interactions in colloidal dispersions  
**B. E. Dolata & R. N. Zia**
- 740 Non-modal stability analysis of the boundary layer under solitary waves  
**J. C. G. Verschaeve, G. K. Pedersen & C. Tropea**
- 773 Advective balance in pipe-formed vortex rings  
**K. Shariff & P. S. Krueger**
- S 797 The effect of core size on the speed of compressible hollow vortex streets  
**D. G. Crowdy & V. S. Krishnamurthy**
- 828 Dynamics of viscous backflow from a model fracture network  
**A. Dana, Z. Zheng, G. G. Peng, H. A. Stone, H. E. Huppert & G. Z. Ramon**
- 850 The initial development of a jet caused by fluid, body and free surface interaction. Part 5. Parasitic capillary waves on an initially horizontal surface  
**J. Billingham, D. J. Needham, E. Korsukova & R. J. Munro**
- S 873 Understanding evolution of vortex rings in viscous fluids  
**A. Tinaikar, S. Advait & S. Basu**
- 910 Drag coefficient of a liquid domain with distinct viscosity in a fluid membrane  
**H. Tani & Y. Fujitani**
- 932 The effect of turbulence on mass transfer rates of small inertial particles with surface reactions  
**N. E. L. Haugen, J. Krüger, D. Mitra & T. Løvås**
- S 952 A boundary integral method with volume-changing objects for ultrasound-triggered margination of microbubbles  
**A. Guckenberger & S. Gekle**
- 998 On the hydrodynamic and acoustic nature of pressure proper orthogonal decomposition modes in the near field of a compressible jet  
**M. Mancinelli, T. Pagliaroli, R. Camussi & T. Castelain**
- 1009 Turbulence, entrainment and low-order description of a transitional variable-density jet  
**B. Viggiano, T. Dib, N. Ali, L. G. Mastin, R. B. Cal & S. A. Solovitz**

### JFM Perspectives (online only)

- P1 Theories of binary fluid mixtures: from phase-separation kinetics to active emulsions  
**M. E. Cates & E. Tjhung**

### JFM Rapids (online only)

- R1 Motion of a helical vortex  
**O. Velasco Fuentes**
- S R2 How surface roughness reduces heat transport for small roughness heights in turbulent Rayleigh–Bénard convection  
**Y.-Z. Zhang, C. Sun, Y. Bao & Q. Zhou**
- S R3 Viscous flow in a soft valve  
**K. Park, A. Tixier, A. H. Christensen, S. F. Arnbjerg-Nielsen, M. A. Zwieniecki & K. H. Jensen**

S indicates supplementary data or movies available online.

- 1 'Shear thickening' in non-shear flows: the effect of microstructure  
**H. J. Wilson**
- 5 Two tandem cylinders of different diameters in cross-flow: effect of an upstream cylinder on wake dynamics  
**L. Wang, Md. M. Alam & Y. Zhou**
- 43 Transition to turbulence in the rotating-disk boundary-layer flow with stationary vortices  
**E. Appelquist, P. Schlatter, P. H. Alfredsson & R. J. Lingwood**
- 72 Models of energy loss from internal waves breaking in the ocean  
**S. A. Thorpe**
- 117 Aerodynamic noise from rigid trailing edges with finite porous extensions  
**A. Kisil & L. J. Ayton**
- 145 Vortex force map method for viscous flows of general airfoils  
**J. Li & Z.-N. Wu**
- 167 Roughness-induced transition by quasi-resonance of a varicose global mode  
**M. A. Bucci, D. K. Puckert, C. Andriano, J.-Ch. Loiseau, S. Cherubini, J.-Ch. Robinet & U. Rist**
- 192 Internal wave generation by tidal flow over a two-dimensional ridge: energy flux asymmetries induced by a steady surface trapped current  
**K. G. Lamb & M. Dunphy**
- 222 Implication of Taylor's hypothesis on measuring flow modulation  
**X. I. A. Yang & M. F. Howland**
- 238 The evolution of second mode internal solitary waves over variable topography  
**C. Yuan, R. Grimshaw & E. Johnson**
- 260 A note on analytic solutions for entraining stratified gravity currents  
**M. C. Horsley & A. W. Woods**
- 277 Turbulent bubble fountains  
**M. C. Lippert & A. W. Woods**
- S 304 Bistability in the synchronization of actuated microfilaments  
**H. Guo, L. Fauci, M. Shelley & E. Kanso**
- 324 Diffusion and mixing effects in hot jet initiation and propagation of hydrogen detonations  
**X. Cai, R. Deiterding, J. Liang, M. Sun & Y. Mahmoudi**
- 352 Sound signals of tsunamis from a slender fault  
**C. C. Mei & U. Kadri**
- S 374 Labyrinthine and secondary wave instabilities of a miscible magnetic fluid drop in a Hele-Shaw cell  
**H. Li, C.-Y. Kao & C.-Y. Wen**
- 397 Turbulence strength in ultimate Taylor–Couette turbulence  
**R. Ezeta, S. G. Huisman, C. Sun & D. Lohse**
- S 413 Equilibrium structure and diffusion in concentrated hydrodynamically interacting suspensions confined by a spherical cavity  
**C. Aponte-Rivera, Y. Su & R. N. Zia**
- S 451 Higher-order moment theories for dilute granular gases of smooth hard spheres  
**V. K. Gupta, P. Shukla & M. Torrilhon**
- S 502 On the viscous flows of leak-out and spherical cap natation  
**R. J. Ryham**
- 532 Motion of open vortex-current filaments under the Biot–Savart model  
**D. T. Kennedy & R. A. Van Gorder**
- 560 A Lagrangian fluctuation–dissipation relation for scalar turbulence. Part III. Turbulent Rayleigh–Bénard convection  
**G. L. Eyink & T. D. Drivas**

Contents continued on inside back cover.
