

NOTES FOR AUTHORS

Proceedings of the Royal Society of Edinburgh: Section A is a general journal, and papers in all areas of mathematics will be considered. Papers to be considered for publication should be sent to the Publications Manager, The Royal Society of Edinburgh, 22 George Street, Edinburgh EH2 2PQ, Scotland.

A paper by more than one author must be submitted with a statement, signed by each author, to the effect that the paper in its entirety is approved by the joint authors and naming the author who will be responsible for correspondence with the Society.

Authors will receive fifty (50) offprints free of charge, this number to be shared between joint authors. Additional offprints may be obtained, in units of fifty, at a fixed scale of prices given on a form which will be attached to the proof.

Authors must prepare their papers as concisely as possible. Manuscripts should be submitted in triplicate, on single-sided A4 paper, double spaced with adequate margins. Authors are advised to retain a copy of their papers as the Society cannot accept responsibility for any loss.

Every paper must be accompanied by a Synopsis, in general not exceeding two hundred words, which will be printed in small type at the beginning of the paper.

References within the text should be indicated by bold numbers in square brackets, e.g. [2] or [3, p. 167]. References at end of text should be in alphabetical order, numbered sequentially.

Authors should ensure that punctuation carries through the mathematics in the proper manner. The use of hyphens should be consistent. In the text avoid such abbreviations as: iff, w.r.t. and thm.

Footnotes should be avoided. Headings should not be underlined. Every effort should be made to avoid complicated subscripts, superscripts, ranges of summation and integration. Replace $e^{(\dots)}$ by $\exp[\dots]$ if the expression in parenthesis is complicated. Use the prime ' or d/dx , but preferably not a dot, to denote ordinary differentiation. If possible use subscripts to denote partial differentiation of $\partial/\partial x$ etc. Bars reaching over several letters should be avoided: use $\sqrt{()}$ or the exponent $1/2$ for the square root.

Note that confusion very often arises between 1 (one) and l (ell); 0 (zero) and O (Capital oh); \circ (composition) and o (lower case oh); x and \times ; U and \cup ; c and \subset ; \in (belongs to) and ε (epsilon); \emptyset (empty set) and ϕ (phi); $_1$ and comma $,$; prime ' and 1 ; K and κ ; p and ρ ; w and ω ; \sum (summation) and Σ (capital sigma); \prod (product) and Π (capital pi); v (lower case vee) and ν (Greek nu); a (lower case a) and α (Greek alpha); y (lower case y) and γ (Greek gamma). Please provide pencilled indicators in the margin where necessary. Where capitals and lower case of the same shape have to be printed, please indicate accordingly. Show italics by single underlining (except in the formulae which are set up normally in italics), bold face/Clarendon by wavy underlining and Greek by red underlining.

The statement of theorems, lemmas, et cetera, will be printed in italics and should be underlined. In definitions key words only should be in italics.

Equations should be indicated by numbers in parentheses in the right-hand margin.

Proofs of papers will be sent to the author. The cost of *authors' corrections in excess of five per cent* of the printers' charge for the setting of a particular paper will be charged to the author.

Except as otherwise permitted under the Copyright, Designs and Patents Act, 1988, this publication may only be reproduced, stored or transmitted, in any form or by any means, with the prior permission in writing of the publisher, or, in the case of reprographic reproduction, in accordance with the terms of a licence issued by the Copyright Licensing Agency. In particular, the Society permits the making of a single photocopy of an article from this issue (under Sections 29 and 38 of the Act) for an individual for the purposes of research or private study.

CONTENTS

P. I. NAUMKIN	
Large-time asymptotic behaviour of a step for the Benjamin–Bona–Mahony–Burgers equation	1
HUIJIANG ZHAO and CHANGJIANG ZHU	
Solutions in the large for certain nonlinear parabolic equations and applications	19
FEIMIN HUANG	
Existence of two solutions of nonlinear elliptic equations with critical Sobolev exponents and mixed boundary conditions	47
YU. LYUBARSKII and I. SPITKOVSKY	
Sampling and interpolation for a lacunary spectrum	77
ANNE DE BOUARD	
Stability and instability of some nonlinear dispersive solitary waves in higher dimension	89
A. VDOVINA	
On the number of nonorientable Wicks forms in a free group	113
MASAHARU TANIGUCHI and YASUMASA NISHIURA	
Stability and characteristic wavelength of planar interfaces in the large diffusion limit of the inhibitor	117
ELMER G. REES	
Linear spaces of real matrices of large rank	147
B.-Y. CHEN, F. DILLEN, L. VERSTRAELEN and L. VRANCKEN	
An exotic totally real minimal immersion of S^3 in CP^3 and its characterisation	153
PH. LAURENÇOT	
Long-time behaviour for a model of phase-field type	167
M. VAN DEN BERG and PETER B. GILKEY	
Heat invariants for odd-dimensional hemispheres	187
MANUEL A. DEL PINO and PATRICIO L. FELMER	
Least energy solutions for elliptic equations in unbounded domains	195
LUIS M. R. SARAIVA	
Singular sets of anisotropic weighted capacity zero and degenerate quasilinear parabolic equations	209
