Great New Titles *from* Cambridge!

A Course on Set Theory

Ernest Schimmerling

\$99.00: Hb: 978-1-107-00817-5: 176 pp.
\$34.99: Pb: 978-1-107-40048-1

Finite and Algorithmic Model Theory

Edited by Javier Esparza,
Christian Michaux,
Charles Steinhorn

*London Mathematical Society
Lecture Note Series*

\$65.00: Pb: 978-0-521-71820-2: 360 pp.

Kurt Gödel and the Foundations of Mathematics Horizons of Truth

Edited by Matthias Baaz,
Christos H. Papadimitriou,
Dana S. Scott, Hilary Putnam,
Charles L. Harper

\$99.00: Hb: 978-0-521-76144-4: 544 pp.

Real Analysis through Modern Infinitesimals

Nader Vakil

Encyclopedia of Mathematics and its Applications

\$115.00: Hb: 978-1-107-00202-9: 586 pp.

Independence-Friendly Logic

A Game-Theoretic Approach

Allen L. Mann, Gabriel Sandu,
Merlijn Sevenster

*London Mathematical Society
Lecture Note Series*

\$69.00: Pb: 978-0-521-14934-1: 200 pp.

Forcing with Random Variables and Proof Complexity

Jan Krajčiček

*London Mathematical Society
Lecture Note Series*

\$65.00: Pb: 978-0-521-15433-8: 264 pp.

Models and Games

Jouko Väänänen

*Cambridge Studies in
Advanced Mathematics*

\$65.00: Hb: 978-0-521-51812-3: 374 pp.

Lectures in Game Theory for Computer Scientists

Edited by Krzysztof R. Apt,
Erich Grädel

\$72.00: Hb: 978-0-521-19866-0: 308 pp.

Deep Beauty

Understanding the Quantum World
through Mathematical Innovation

Edited by Hans Halvorson

\$99.00: Hb: 978-1-107-00570-9: 438 pp.

Infinity

New Research Frontiers

Edited by Michael Heller,
W. Hugh Woodin

\$99.00: Hb: 978-1-107-00387-3: 320 pp.

CAMBRIDGE
UNIVERSITY PRESS

Combinatorics, Probability and Computing

Editor-in-Chief

Béla Bollobás, *DPMMS, Cambridge, UK; University of Memphis, USA*

Published bimonthly, *Combinatorics, Probability & Computing* is devoted to the three areas of combinatorics, probability theory and theoretical computer science. Topics covered include classical and algebraic graph theory, extremal set theory, matroid theory, probabilistic methods and random combinatorial structures; combinatorial probability and limit theorems for random combinatorial structures; the theory of algorithms (including complexity theory), randomised algorithms, probabilistic analysis of algorithms, computational learning theory and optimisation.

Natural Language Engineering

Executive Editor

Ruslan Mitkov, *University of Wolverhampton, UK*

Natural Language Engineering meets the needs of professionals and researchers working in all areas of computerised language processing, whether from the perspective of theoretical or descriptive linguistics, lexicology, computer science or engineering. Its aim is to bridge the gap between traditional computational linguistics research and the implementation of practical applications with potential real-world use. The journal publishes research articles on a broad range of topics, an industry-watch column and book reviews. *JNLE* now includes surveys, as well as squibs discussing specific problems.

ReCALL

An international journal on technologies and language learning

Now indexed by Thomson ISI and Scopus

Published for EUROCALL (European Association for Computer-Assisted Language Learning)

Editors

June Thompson, *University of Hull, UK*
Françoise Blin, *Dublin City University, Ireland*

The primary focus of *ReCALL* is the use of technologies for language learning and teaching, including all relevant aspects of research and development. Typical subjects for submissions include theoretical debate on language learning strategies and their influence on courseware design; practical applications at developmental stage; evaluative studies of courseware used in the teaching and learning process; exploitation and assessment of the potential of technological advances in the delivery of language learning materials; discussions of policy and strategy at institutional and discipline levels.

Robotica

Editor-in-Chief

G. S. Chirikjian, *Johns Hopkins University, USA*

An Official Journal of the
International Federation of Robotics

Robotica provides an international forum for the multidisciplinary subject of robotics and encourages developments in this important field of automation with regard to industry, education and research. It covers the many aspects of robotics, including sensory perception, software, kinematics and dynamics involved in robot design, robot task planning and description, intelligibility of skilled motion, applications of robots in the service industries, world model representation, artificial intelligence, development of relevant educational courses, training methods, economic and cost problems and other items of theoretical and practical interest.

Theory and Practice of Logic Programming

Published for the Association for Logic programming

Theory and Practice of
Logic Programming

VOLUME 10 PARTS 4-5 JULY 2010

Special Issue on
20th International Conference
on Logic Programming

edited by Manuel Hermenegildo and Torsten Schaub

CAMBRIDGE
UNIVERSITY PRESS

Editor-in-Chief

I Niemelä, *Helsinki University of Technology, Finland*

Theory and Practice of Logic Programming emphasises both the theory and practice of logic programming. Logic programming applies to all areas of artificial intelligence and computer science and is fundamental to them. Among the topics covered are AI applications that use logic programming, logic programming methodologies, specification, analysis and verification of systems, inductive logic programming, multi-relational data mining, natural language processing, knowledge representation, non-monotonic reasoning, semantic web reasoning, databases, implementations and architectures and constraint logic programming.

CAMBRIDGE

JOURNALS

Journal of Functional Programming

Editors-in-Chief

Matthias Felleisen, *Northeastern University, USA*

Xavier Leroy, *INRIA Rocquencourt, France*

The *Journal of Functional Programming* is the only journal devoted solely to the design, implementation, and application of functional programming languages, spanning the range from mathematical theory to industrial practice. Topics covered include functional languages and extensions, implementation techniques, reasoning and proof, program transformation and synthesis, type systems, type theory, language-based security, memory management, parallelism and applications. The journal is of interest to computer scientists, software engineers, programming language researchers and mathematicians interested in the logical foundations of programming.

Instructions for contributors

Editorial policy

Mathematical Structures in Computer Science (MSCS) is a journal of theoretical computer science which focuses on the application of ideas from the structural side of mathematics and mathematical logic to computer science. The journal aims to bridge the gap between theoretical contributions and software design, publishing original papers or broad surveys with original perspectives in all areas of computing, provided that ideas or results from logic, algebra, geometry, category theory or other areas of logic and mathematics form a basis for the work. The journal also welcomes applications to computing based on the use of specific mathematical structures (e.g. topological and order-theoretic structures) as well as on proof-theoretic notions or results. In addition, it is interested in contributions in new interdisciplinary fields bridging computer science, quantum physics, mathematics and information theory. In particular, papers on mathematical formalisms for quantum computation, quantum information processing and communication will be considered.

The journal will also consider papers on computational modelling of epigenetic phenomena, protein-protein interactions, stochasticity in molecular cascades. Mathematical approaches to System Biology will be welcomed, within the broad framework of post-genomic views of embryogenesis and evolution.

The purpose of the journal is to increase the circulation of new very high standard results in fast growing areas which are currently influencing various aspects of actual computing. Indeed, this journal is not meant to be only a 'theory journal' but, by choosing as a theme the use of mathematical methods of Computer Science independently of their area of application, it aims to highlight connections among different topics and to encourage applications of theoretical contributions.

In order to promote the use of mathematical methods in computer science, expository and introductory papers are welcome, provided that there is a clear connection to computational issues or they investigate mathematical structures whose relevance to computer science is well established. However, these contributions should be directed to the broad audience of computer scientists to which this journal is addressed. Equally, discussions of a methodological or philosophical nature concerning the foundation of Computer Science are of interest for the journal.

Submission of manuscripts

Papers may be submitted to any member of the Editorial Board. A file .pdf should be sent accompanied by the author's address, telephone and fax number, and e-mail address.

A copy of the paper together with the name of the editor chosen should also be sent to the Editor-in-Chief who will record the submission.

Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Authors of articles published in the journal assign copyright to Cambridge University Press (with certain rights reserved) and you will receive a copyright assignment form for signature on acceptance of your paper.

The publisher encourages submission of papers written in LaTeX using the *MSCS* LaTeX style file. The LaTeX 2.09 style file *mcs.sty* together with a guide to its use *mcsguide.tex*, or the corresponding LaTeX 2e file *mcs.cls* are available via anonymous ftp from the Cambridge University Press site at <ftp.cup.cam.ac.uk> in the directories `/pub/texarchive/journals/latex/mcs-sty` or `/pub/texarchive/journals/latex/mcs-cls`. In the directory `/pub/texarchive/journals/latex/mcs-sty` you will find a concatenated file called *mcs.all*. This file contains *readme.txt*, *mcs.sty* and *mcsguid.tex*. If you Tex *mcsguid.tex* you will get a full set of instructions for using the style file. In case of difficulties obtaining these files, there is a help-line available via e-mail; please contact texsupport@techbooks.com. While use of the *MSCS* LaTeX style file is preferred, ordinary LaTeX or plain TeX files can also be accepted.

On final acceptance of their paper, authors should make accessible to the Editor-in-Chief (downloadable) the LaTeX source code including all figures (line figures only), a file .pdf and author-defined macro and style files, together with a hard copy produced using the same file. Discs should be in Apple Mac or PC format and will not be returned. The publisher reserves the right to typeset any article by conventional means if the author's TeX code presents problems in production.

Layout of manuscripts

Papers should be typewritten in **double spacing throughout**, on one side of the paper. Please avoid footnotes if possible. Papers should begin with an abstract of not more than 300 words and should end with a brief concluding section.

Illustrations

Figures should be drawn in indian ink on good quality white paper or produced by computer to comparable quality. Wherever possible they will be reproduced with the author's original lettering. Originals of figures should not be sent until the paper has been accepted. A list of captions should be attached separately.

References

The Harvard system of references should be used. In the text, a reference should be quoted by the author's name and date in parentheses, in date order, e.g. (Smith 1983; Jones and Jones 1985; Hunter 1986a,b). Where there are three or more authors, the first name followed by et al. should be used. A full list of references should be given at the end of the main text, listing, in alphabetical order, surname of author and initials; year of publication (in parentheses); article title; journal name abbreviated in accordance with the *World List of Scientific Periodicals* (4th edn); volume number; inclusive page numbers. For books and conference proceedings, place of publication and publisher (and Editor(s) if appropriate) should be included.

Proof Reading

Typographical or factual errors only may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors. No page charge is made.

Offprints

Extra offprints may be purchased from the publisher if ordered at proof stage.
