

Information for Contributors

1. Manuscripts must be written in English. All manuscripts will be referred to acknowledged experts in the subject. Only those receiving favourable recommendations from the referees will be accepted for publication. Manuscripts may be sent to any Board member, any Associate Editor or the Editor.
2. The typescript should be double spaced, on one side of good grade paper, allowing a reasonable left-hand margin. An original and two copies should be submitted with the author's full postal address, position and affiliations.
3. The title and section headings should highlight the significant points. A short abstract should precede the main text.
4. One copy of photographs, prints or transparencies of good quality and unmarked should be submitted. Where lines or lettering are to appear on the photograph, an additional print should be supplied appropriately marked. Each should have, lightly written on the back, the author's name, the figure number and an indication of which is the top of the picture.
5. One copy of each line diagram should be submitted at approximately twice final size and unlettered. Diagrams must be drawn in indian ink on plain white or transparent paper. A second copy should be supplied with lettering included. The author's name and the figure number should be written on this copy.
6. Tables should be typewritten on separate sheets. Avoid, where possible, very wide tables.
7. References and footnotes should be cited according to the Harvard (Author/date system), also known as the "British form". In the text, author and year are cited in brackets e.g. "... was found by McCarthy (1980; 1980a) ..." or "(Emmett *et al.* 1972)". Full references are listed in alphabetic order at the end of the paper. References are not numbered. An example of a reference list is:
DEUTSCH, C. & KLARSFELD, S. 1973 *Phys. Rev.* **A7**, 2081.
NICHOLSON, D. R. 1983 *Plasma Theory*, (John Wiley, New York).
OOMURA, H. *et al.* 1982 *Res. Rep ILE*, ILE-8207p.
OOMURA, H. *et al.* 1982a *Trans. ANS*, **43**, 617.
Note that the year of publication appears after the author's name. If possible, all authors names should be listed in preference to "*et al.*" If one author or team is referred to more than once in any year, the letters a, b, etc should be added after the year to distinguish the individual references.
8. Correction to proofs should be restricted to printers' errors only. Authors are entitled to 25 offprints of their article free of charge. Additional offprints may be purchased if they are ordered on the form sent with the proofs.

LASER AND PARTICLE BEAMS

Volume 6 Part 3 August 1988

Special Issue Papers

Anthony L. Peratt (LANL, Los Alamos, USA): Guest Editor – Particle beams and basic phenomena in the plasma universe, a special issue in honor of the 80th birthday of Hannes Alfvén 385

Hannes Alfvén (Royal Inst. Tech., Stockholm, Sweden): Cosmology in the plasma universe 389

Halton Arp (MPI, München, Germany-W.): Gas, dust and plasma in extragalactic space 399

W. H. Bostick (Stevens Inst., USA): The Hubble expansion as ascribed to mutual magnetic induction between neighboring galaxies 405

P. F. Browne (U. Manchester, UK): Acceleration in the plasma focus and in astrophysics 409

A. Crucius (MPI, Bonn, Germany-W.): The influence of a thermal plasma on synchrotron radiation 421

Carl-Gunne Fälthammar (Royal Inst. Tech., Sweden): Laboratory and near-earth space plasma as a key to the plasma universe 437

J. W. Kierein (BAS, Boulder, USA): A criticism of big bang cosmological models based on interpretation of the red shift 453

Eric J. Lerner (LPP, Lawrenceville, NJ, USA): Plasma model of microwave background and primordial elements: an alternative to the big bang 457

Anthony L. Peratt (LANL, Los Alamos, USA): The role of particle beams and electrical currents in the plasma universe 471

William Peter and Anthony L. Peratt (LANL, Los Alamos, USA): Thermalization of synchrotron radiation from field-aligned currents 493

T. A. Potemra, M. J. Engebretson, L. J. Zanetti, R. E. Erlandson, and P. F. Bythrow (Johns Hopkins U. & Augsburg Coll., USA): Satellite observations of currents and waves in space plasmas 503

W. B. Thompson (UCSD, La Jolla, USA): The stimulated emission of bremsstrahlung in a fully ionized plasma 513

Gerd-Hannes Voigt (Rice U., USA): Quasi-static MHD processes in Earth's magnetosphere 525

D. R. Wells (U. Miami, USA): Containment forces in stable plasma configurations 539

E. R. Wollman (Bates Coll., USA): A grain plasma model of galaxies 545

M. Matsumoto, S. Kawata, Y. Masubuchi, K. Masugata, M. Murayama, M. Ito and K. Yatsui (U. of Nagaoka, Japan): Focusing of intense light-ion beam by self magnetic field 555

Yu. M. Aleksandrov, M. O. Koshevoi, V. A. Murashova, T. F. Nikitina, A. A. Rupasov, G. V. Sklizkov, A. S. Shikanov, M. N. Yakimenko, Yu. A. Zakharenkov (Lebedev Inst., Moscow, USSR), **K. Eidmann, R. Sigel, G. D. Tsakiris** (MPI, Germany-W): X-ray spectrometer using a free-standing transmission grating and a microchannel plate as detector for laser plasma studies 561

Gu Min and Tan Weihai (Shanghai Inst., China): Dynamic process of the second harmonic emission in laser produced plasmas 569

Cord Passow (Inst. Kernphysik, Karlsruhe, Germany W.): Hydrodynamic Hamilton theory for discussing the space charge (Langmuir-Child law) at high density particle currents between poles 579

V. T. Astrelin (Inst. Nucl. Res., Novosibirsk, USSR) **P. Vrba, J. Ullschmied, M. Člupek** (Inst. Plasma Physics, Prague, Czechoslovakia): Numerical simulation of high current relativistic electron flow 587
