

# TROPICAL AGRICULTURE

THE JOURNAL OF THE FACULTY OF AGRICULTURE  
(IMPERIAL COLLEGE OF TROPICAL AGRICULTURE)  
UNIVERSITY OF THE WEST INDIES

Volume 56

Number 4

October 1979

The impact of plant breeding on sugar-cane yields in Barbados

*N. W. Simmonds*

The drying characteristics of nutmegs

*D. R. McGaw*

Increases in chlorophyll retention times of limes after post-harvest immersion in  $N_6$ -benzyladenine and gibberellic acid

*G. Blunden, E. M. Jones, H. C. Passam and E. Metcalf*

Prewaning growth performance of Santa Gertrudis, Jamaica Red and Guernsey crossbred calves in St Lucia, West Indies

*R. Rastogi, C. Hennecart and S. Fontinelle*

Effect of source of nitrogen supplement and corn and cob meal inclusion on the voluntary intake and performance by steers given maize silage

*C. Thomas*

The utilization of *Stylosanthes guyanensis* meal by broiler chicks

*O. C. Onwudike and A. A. Adegbola*

The influence of grass cover on runoff and soil erosion from soils in the Machakos area, Kenya

*T. R. Moore, D. B. Thomas and R. G. Barber*

Studies on the root-knot nematodes of winged bean (*Psophocarpus tetragonolobus*) in Papua New Guinea

*T. V. Price and D. S. Linge*

Identification of resistance to cowpea aphid-borne mosaic virus

*J. L. Ladipo and D. J. Allen*

Response of two grasses to inoculation with *Azospirillum* spp. in a Bahamian soil

*R. W. Taylor*

Light penetration in wide-row upland rice

*C. A. Jones, F. J. P. Zimmermann and F. M. Dall'Acqua*

Leaf area estimation by non-destructive methods in pigeon pea, *Cajanus cajan* (L.) Millsp.

*G. Hughes, J. D. H. Keatinge and S. P. Scott*

Annual subscription £30 (U.K. and overseas)

**Title.** The development of automatic bibliographic methods, based on indexing the significant words in the title, make it essential that the title of each paper should contain the maximum of useful information. It is particularly important, for example, that the title should contain references, where relevant, to the crop, the character of the investigation, the factors under review, and the climatic or geographic area in which the work was done.

**Headings.** The following details should be given at the head of the first sheet: the full title of the paper; a short title for running headlines, not exceeding 48 characters, counting each letter and space as one character; the name(s) of the author(s); the address at which the work was carried out; the present address(es) of author(s), if different from the previous item; and the address(es) to which proofs should be sent (see under 'Proofs' below).

**Summary.** A short but accurate and informative summary must be included, *not longer than ten lines of typescript*. The preparation of the summary, which requires much care, is not an Editorial responsibility

**Experimentation.** This journal specialises in the presentation of data based on up-to-date methods of field experimentation. It is therefore important, where appropriate, that papers should include: an adequate account of experimental lay-outs; a description of treatments and general management; and assessments of experimental variability (e.g. coefficient of variation) and of the statistical significance of the results, specifying the methods used for the analysis (but without showing any details of the calculations). Papers can rarely be accepted if the work was carried out in containers, and/or under glasshouse conditions, unless it forms part of an investigation on field problems. The journal does not normally publish accounts of straightforward trials of pesticides, herbicides or varieties, since such papers are usually of local interest only.

**Plates.** Illustrations are welcome if they contribute to an understanding of the paper, but will only be accepted if of high quality. Photographs should be provided as unmounted glossy black-and-white prints (colour prints, but not colour transparencies, are acceptable for reproduction in black-and-white; they can only be reproduced in colour if a financial subsidy is provided). If lettering is to be inserted on a print, this should be shown on a spare copy or an overlay, and an unmarked print should be provided for marking by the printer.

**Diagrams.** Diagrams, including lettering, should be drawn in Indian ink on white drawing paper. Each illustration should bear the name of the author(s) and the figure number, written clearly in the margin or on the back. *On no account should diagrams be submitted on sheets larger than foolscap size.*

**Legends.** The legends for all illustrations should be given on a separate sheet of paper, clearly marked with the number of each plate or diagram. The ideal position for each diagram should be marked in the text, although it may not be possible to put the illustration exactly in that place. Plates will normally be bound immediately after the end of the paper.

**Dating the work.** Dates should be given for the beginning event of each experiment. *The journal is reluctant to accept papers submitted more than three years after the end of the relevant experimental work.*

**Tables.** Each table should be typed on a separate sheet of paper, and its preferred position indicated on the typescript. Each table should be numbered and bear an appropriate title, along the lines normally used for tables in this publication. Contributors are specially asked to avoid presenting tables that are too large to print across the page, hence the limit of 80 typewriter characters referred to earlier.

**Use of metric units.** All data must be presented in metric units, preferably SI units. Comparable data in local units (e.g. acres, ounces, etc.) may be given in parentheses at the first mention, if authors wish, or factors for converting metric into local units may be given as footnotes. The use of SI units will probably become mandatory at some time in the future.

**References.** The Harvard system of citation is used throughout as follows: name and initial(s) of author(s); year of publication in parentheses, further distinguished by the addition of small letters a, b, c, etc., where there are citations to more than one paper published by the same author(s) in one year; contracted title of periodicals as given in the World List of Scientific Periodicals; volume number in arabic figures; number of the first page of the paper. In the text, references should be denoted by giving the name of the author(s) with the date of publication in parentheses, e.g. Brown (1937) . . . (Brown, 1937), (Brown, 1927a; Jones and Smith, 1942a, b; Smith *et al.*, 1950). In the list of references all authors' names should be given. **Not more than fifteen papers should normally be cited.**

**Referees.** All manuscripts are critically reviewed by expert referees, on whose advice the Editor accepts or rejects contributions, or returns them to authors for reconsideration.

**Proofs.** Two sets of single-sided page proofs will be sent to each author, but it is the responsibility of the senior author to collate the views of his co-author(s) and submit a consolidated set of corrections to the Editor, by returning to him the printer's marked proof (identified by the words 'marked copy') with all required corrections. No further corrected proof will be sent to the author(s), unless this is specially requested. Excessive alterations, other than corrections of printer's errors, may be disallowed or charged to the author.

**Offprints.** Fifty offprints will be sent free of charge to the author. Where there are two or more authors, all fifty offprints will be sent to the senior author, unless the printer is asked to divide them. Additional offprints may be ordered on the form sent out with the proofs (to the senior author only if there is more than one) provided this is returned to the printer within seven days of its receipt by the author.

**Return of manuscript.** Where a submission is not accepted for publication the top copy will be returned; manuscripts on thin (air-mail) paper will usually be sent by air but bulky manuscripts from overseas may be returned by surface mail.

**EXPERIMENTAL AGRICULTURE**  
**VOLUME 16, NUMBER 1, JANUARY 1980**

CONTENTS

<b>J. V. Waterworth:</b> Green Revolution Methodology in Nigeria	1
<b>D. Kumar and L. L. Tieszen:</b> Photosynthesis in <i>Coffea arabica</i> . I. Effects of Light and Temperature	13
<b>D. Kumar and L. L. Tieszen:</b> Photosynthesis in <i>Coffea arabica</i> II. Effects of Water Stress	21
<b>M. R. Rao and R. W. Willey:</b> Preliminary Studies of Intercropping Combinations Based on Pigeonpea or Sorghum	29
<b>P. Loganathan and T. S. Balakrishnamurti:</b> Effects of NPK Fertilizers on Young Coconut ( <i>Cocos nucifera</i> ) on a Sandy Soil in Sri Lanka	41
