# Contents

No. 1 (AUGUST 1990)

|  |     |
|--|-----|
| <b>Special Article. Typing tools for the investigation of epidemic fungal infection</b>  |     |
| Howell, S. A. and Noble, W. C.   | 1   |
| <b>Prevalence of verocytotoxigenic <i>Escherichia coli</i> in ground beef, pork, and chicken in southwestern Ontario</b>   |     |
| Read, S. C., Gyles, C. L., Clarke, R. C., Lior, H. and McEwen, S.  | 11  |
| <b>International increase in <i>Salmonella enteritidis</i>: A new pandemic?</b>  |     |
| Rodrigue, D. C., Tauxe, R. V. and Rowe, B.   | 21  |
| <b>Molecular characterization of trimethoprim resistance in <i>Shigella sonnei</i> in Sicily</b>   |     |
| Agodi, A., Jones, C., Threlfall, E. J., D'Angelo, M. and Marranzano, M.  | 29  |
| <b>Epidemiology of shigellosis in Teknaf, a coastal area of Bangladesh: a 10-year survey</b>   |     |
| Anowar Hossain, MD., Albert, M. J. and Zahid Hasan, KH.  | 41  |
| <b>Molecular epidemiology of shigella infection in Central Australia</b>   |     |
| Albert, M. J., Singh, K. V., Murray, B. E. and Erlich, J.  | 51  |
| <b>Plasmid profile analysis and antimicrobial susceptibility patterns of shigella isolates from Nigeria</b>  |     |
| Olukoya, D. K. and Oni, O.   | 59  |
| <b>Plasmid profiles of antibiotic-resistant <i>Shigella dysenteriae</i> types 2, 3, 4, 6 and 7 isolated in Ethiopia during 1976–85</b>   |     |
| Gebre-Yohannes, A. and Drasar, B. S.   | 65  |
| <b>Incidence of campylobacter infection in infants in western Algeria and the possible protective role of breast feeding</b>   |     |
| Mégraud, F., Boudraa, G., Bessaoud, K., Bensid, S., Dabis, F., Soltana, R. and Touhami, M.   | 73  |
| <b>Serological grouping of <i>Treponema hyodysenteriae</i></b>   |     |
| Hampson, D. J., Mhoma, J. R. L., Combs, B. G. and Lee, J. I.   | 79  |
| <b>Binding of IgA and/or IgG is a common property among clinical isolates of group A streptococci</b>  |     |
| Lindahl, G. and Stenberg, L.   | 87  |
| <b>Drug-resistant coagulase-negative skin staphylococci. Evaluation of four marker systems and epidemiology in an orthopaedic ward</b>   |     |
| Thore, M., Kühn, I., Löfdahl, S. and Burman, L. G.   | 95  |
| <b>Numerical analysis of SDS–PAGE protein patterns of <i>Serratia marcescens</i>: a comparison with other typing methods</b>   |     |
| Holmes, B., Costas, M. and Sloss, L. L.  | 107 |
| <b>Serotype-specific outbreak of group B meningococcal disease in Iquique, Chile</b>   |     |
| Cruz, C., Pavez, G., Aguilar, E., Grawe, L., Cam, J., Mendez, F., Garcia, J., Ruiz, S., Vicent, P., Canepa, I., Martinez, M., Boslego, J., Zollinger, W., Arthur, J. and Caugant, D. | 119 |
| <b>Investigation of a pseudo-outbreak of '<i>Pseudomonas thomasii</i>' in a special-care baby unit by numerical analysis of SDS–PAGE protein patterns</b>                            |     |
| Costas, M., Holmes, B., Sloss, L. L. and Heard, S.   | 127 |
| <b>Health effects of beach water pollution in Hong Kong</b>  |     |
| Cheung, W. H. S., Chang, K. C. K., Hung, R. P. S. and Kleevens, J. W. L.   | 139 |
| <b>Elimination of mycoplasmas from the murine genital tract by hormone treatment</b>   |     |
| Taylor-Robinson, D. and Furr, P. M.  | 163 |
| <b><i>Legionella pneumophila</i> serogroup 1 population in Italy by monoclonal subtyping</b>   |     |
| Castellani Pastoris, M., McIntyre, M. and Goldoni, P.  | 169 |
| <b>Serological study of the epidemiology of mumps virus infection in north-west England</b>  |     |
| Nokes, D. J., Wright, J., Morgan-Capner, P. and Anderson, R. M.  | 175 |
| <b>Similarities in nucleotide sequence between serum and faecal human parvovirus DNA</b>   |     |
| Turton, J., Appleton, H. and Clewley, J. P.  | 197 |
| <b>A serological survey of rinderpest antibody in wildlife and sheep and goats in Northern Tanzania</b>  |     |
| Anderson, E. C., Jago, M., Mlengeya, T., Timms, C., Payne, A. and Hirji, K.  | 203 |
| <b>Notes for Contributors</b>  |     |

|  |     |
|--|-----|
| <b>Outbreaks of infection with methicillin-resistant <i>Staphylococcus aureus</i> on neonatal and burns units of a new hospital</b>  |     |
| Farrington, M., Ling, J., Ling, T. and French, G. L.   | 215 |
| <b>Characterization of the antibody response in <i>Corynebacterium jeikeium</i> septicaemias</b>   |     |
| Clark, I., Burnie, J. P., Coke, A. P., Matthews, R. C. and Oppenheim, B. A.  | 229 |
| <b>The colonization resistance of the digestive tract in different animal species and in man; a comparative study</b>  |     |
| Van der Waaij, D. and Van der Waaij, B. D.   | 237 |
| <b>A comparative study of clinical and food isolates of <i>Listeria monocytogenes</i> and related species</b>  |     |
| Szabo E. A. and Desmarchelier, P. M.   | 245 |
| <b>Cell surface hydrophobicity, adherence to HeLa cell cultures and haemagglutination pattern of pyelonephritogenic <i>Escherichia coli</i> strains</b>  |     |
| Brauner, A., Katouli, M., Tullus, K. and Jacobson, S. H.   | 255 |
| <b>DNA restriction digest and ribosomal RNA gene patterns of <i>Campylobacter jejuni</i>: a comparison with bio-, sero-, and bacteriophage-types of United Kingdom outbreak strains</b>  |     |
| Owen, R. J., Hernandez J. and Bolton, F.   | 265 |
| <b>The incidence of virulence factors in mesophilic <i>Aeromonas</i> species isolated from farm animals and their environment</b>  |     |
| Gray, S. J., Stickler, D. J. and Bryant, T. N.   | 277 |
| <b>The epidemiology of salmonella infection of calves: the role of dealers</b>   |     |
| Wray, C., Todd, N., McLaren, I., Beedell, Y. and Rowe, B.  | 295 |
| <b>Salmonella colonization in commercial pet turtles (<i>Pseudemys scripta elegans</i>)</b>  |     |
| Shane, S. M., Gilbert, R. and Harrington, K. S.  | 307 |
| <b>Phage type and DNA plasmid profile of <i>Salmonella typhimurium</i> isolates in the area of Isernia, Italy</b>  |     |
| Fantasia, M., Ricci, N., Manuppella, A., Martini, A., Filetici, E. and Laurelli, T.  | 317 |
| <b>Infection with bacterial enteropathogens in Swedish travellers to South-East Asia – a prospective study</b>   |     |
| Åhrén, C. M., Jertborn, M., Herclik, L., Kaijser, B. and Svennerholm, A.-M.  | 325 |
| <b>Sex differentials in susceptibility to lymphatic filariasis and implications for maternal child immunity</b>  |     |
| Brabin, L.   | 335 |
| <b>Determination of colonization resistance of the digestive tract by biotyping of Enterobacteriaceae</b>  |     |
| Apperloo-Renkema, H. Z., Van der Waaij, B. D. and Van der Waaij, D.  | 355 |
| <b>Faecal contamination of water and fingertip-rinses as a method for evaluating the effect of low-cost water supply and sanitation activities on faeco-oral disease transmission. I. A case study in rural north-east Thailand</b>                  |     |
| Pinfold, J. V.   | 363 |
| <b>Faecal contamination of water and fingertip-rinses as a method for evaluating the effect of low-cost water supply and sanitation activities on faeco-oral disease transmission. II. A hygiene intervention study in rural north-east Thailand</b> |     |
| Pinfold, J. V.   | 377 |
| <b>Q fever in Plymouth 1972–88. A review with particular reference to neurological manifestations</b>  |     |
| Reilly, S., Northwood, J. L. and Caul, E. O.   | 391 |
| <b>Selective antenatal screening for toxoplasmosis and the latex agglutination test</b>  |     |
| Holliman, R. E., Barker, K. F. and Johnson, J. D.  | 409 |
| <b>Serological study of the prevalence of toxoplasmosis in asymptomatic patients infected with human immunodeficiency virus</b>  |     |
| Holliman, R. E.  | 415 |
| <b>A review of outbreaks of infectious disease in schools in England and Wales 1979–88</b>   |     |
| Joseph, C., Noah, N., White, J. and Hoskins, T.  | 419 |
| <b>The time course of the immune response to experimental coronavirus infection of man</b>   |     |
| Callow, K. A., Parry, H. F., Sergeant, M. and Tyrrell, D. A. J.  | 435 |

|  |     |
|--|-----|
| <b>Isolations of African horse sickness virus from vector insects made during the 1988 epizootic in Spain</b>  |     |
| Mellor, P. S., Boned, J., Hamblin, C. and Graham, S.   | 447 |
| <b>Book Review</b>   | 455 |
| <b>Notes for Contributors</b>  |     |
| <b>Human antibody response to fragments A and B of diphtheria toxin and synthetic peptide of amino acid residues 141–157 of fragment A</b>                             |     |
| Perera, V. Y. and Corbel, M. J.  | 457 |

# Epidemiology and Infection

Original reports and reviews on all aspects of  
infection of man and animals

## CONTENTS

- Human antibody response to fragments A and B of diphtheria toxin and synthetic peptide of amino acid residues 141–157 of fragment A** 457  
Perera, V. Y. and Corbel, M. J.
- Experimental studies on the comparative infectivity and pathogenicity of *Streptococcus suis* type 2. I. Porcine and human isolates in pigs** 469  
Robertson, I. D. and Blackmore, D. K.
- Experimental studies on the comparative infectivity and pathogenicity of *Streptococcus suis* type 2. II. Porcine and human isolates in laboratory animals** 479  
Robertson, I. D. and Blackmore, D. K.
- Red kidney bean poisoning in the UK: an analysis of 50 suspected incidents between 1976 and 1989** 485  
Rodhouse, J. C., Haugh, C. A., Roberts, D. and Gilbert, R. J.
- Crystal violet reactions of fresh clinical isolates of *Staphylococcus aureus* from two British hospitals** 493  
Freeman, R., Hudson, S. J. and Burdess, D.
- Diversity studies of salmonella incidents in some domestic livestock and their potential relevance as indicators of niche width** 501  
Hunter, P. R. and Izsák, J.
- Extended phage-typing scheme for *Escherichia coli* 0157:H7** 511  
Khakhria, R., Duck, D. and Lior, H.
- Evaluation of numerical typing systems of *Escherichia coli* using the API 50 CH and the PHP-EC systems as models** 521  
Kühn, I., Brauner, A. and Möllby, R.
- Escherichia coli* populations from diabetic and non-diabetic patients with bacteraemia and faecal samples from healthy subjects – a comparative study** 533  
Brauner, A., Hylander, B., Wretling, B., Östenson, C.-G. and Kühn, I.
- Differentiation of *Achromobacter*-like strains from human blood by DNA restriction endonuclease digest and ribosomal RNA gene probe patterns** 541  
Holmes, B., Costas, M., Wood, A. C., Owen, R. J. and Morgan, D. D.
- Enhanced detection of *Candida* in blood cultures with the BACTEC 460 system by use of the aerobic-hypertonic (8B) medium** 553  
Yagupsky, P., Nolte, F. S. and Menegus, M. A.
- Neisseria cuniculi* in ruminants: epidemiological aspects** 559  
Elad, D., Shlomovitz, S., Bernstein, M. and Bassan, J.
- Zoonotic infections in Northern Ireland farmers** 565  
Stanford, C. F., Connolly, J. H., Ellis, W. A., Smyth, E. T. M., Coyle, P. V., Montgomery, W. I. and Simpson, D. I. H.

## NOTES FOR CONTRIBUTORS

The requirements of *Epidemiology and Infection* are in accordance with the International Committee of Medical Journal Editors. Uniform requirements for manuscripts submitted to biomedical journals. *Br Med J* 1988; 296: 401–5 and *Ann Intern Med* 1988; 108: 258–65.

### *Submission of manuscripts*

Papers for publication should be sent to Professor J. R. Pattison, Faculty of Clinical Sciences, School of Medicine, University College London, University Street, London WC1E 6JJ. The typescript and two copies should be sent, with three copies of all tables and illustrations. Authors are requested to include a self-addressed envelope for acknowledgement of receipt. Papers forwarded to the Editor for publication are understood to be offered to *Epidemiology and Infection* alone, unless the contrary is stated.

Manuscripts must be accompanied by a covering letter. This must include (a) information on prior or duplicate publication or submission elsewhere of any part of the work; (b) a statement of financial or other relationships that might lead to a conflict of interests; (c) a statement that the manuscript has been read and approved by all authors; and (d) the name and address of the corresponding author, who is responsible for communicating with the other authors about revisions and final approval of the proofs.

The manuscripts must be accompanied by copies of any permissions to reproduce published material, to use illustrations or report sensitive personal information of identifiable persons, or to name persons for their contributions.

### *Preparation of manuscript*

Type the manuscript on white bond paper, 216 × 279 mm (8½ × 11 in) or ISO A4 (212 × 297 mm), with margins of at least 25 mm (1 in). Type only on one side of the paper. **Use double spacing throughout**, including title page, summary, text, acknowledgments, references, tables, and legends for illustrations. Begin each of the following sections on separate pages: title page, summary, text, acknowledgments, references, individual tables, and legends. Number pages consecutively, beginning with the title page. Type the page number in the upper or lower right-hand corner of each page.

### TITLE PAGE

The title page should carry (a) the title of the article, which should be concise, but informative; (b) initials and last name of each author; (c) name of department(s) and institution(s) to which the work should be attributed; (d) disclaimers, if any; (e) name and address of author responsible for correspondence about the manuscript; (f) name and address of author to whom requests for reprints should be addressed or statement that reprints will not be available from the author; (g) a short running head of no more than 40 characters (count letters and spaces) placed at the foot of the title page and identified.

## AUTHORSHIP

All persons designated as authors should qualify for authorship. Each author should have participated sufficiently in the work to take public responsibility for the content. A paper with corporate (collective) authorship must specify the key persons responsible for the article; others contributing to the work should be recognized separately (see 'Acknowledgments'). Editors may require authors to justify the assignment of authorship.

## SUMMARY

The second page should carry a summary of no more than 150 words. The abstract should state the purposes of the study or investigation, basic procedures (selection of study subjects or experimental animals; observational and analytical methods), main findings (give specific data and their statistical significance, if possible), and the principal conclusions. Emphasize new and important aspects of the study or observations.

## TEXT

The text of articles is usually divided into sections with the headings Introduction, Methods, Results and Discussion. However, the journal also publishes short articles in the form of a continuous narrative with the only separate section being the summary. These short articles are not published more rapidly but are intended to be the vehicles for valuable but limited or preliminary observations.

## ACKNOWLEDGMENTS

One or more statements should specify (a) contributions that need acknowledging but do not justify authorship, such as general support by a department chairman; (b) acknowledgments of technical help; (c) acknowledgments of financial and material support, specifying the nature of the support; (d) financial relationships that may pose a conflict of interest.

Persons who have contributed intellectually to the paper but whose contributions do not justify authorship may be named and their function or contribution described – for example, 'scientific adviser', 'critical review of study proposal', 'data collection', 'participation in clinical trial'. Such persons must have given their permission to be named. Authors are responsible for obtaining written permission from persons acknowledged by name because readers may infer their endorsement of the data and conclusions.

Technical help should be acknowledged in a paragraph separate from those acknowledging other contributions.

## REFERENCES

Number references consecutively in the order in which they are first mentioned in the text. Identify references in text, tables and legends by arabic numerals in parentheses. References cited only in tables or in legends to figures should be

numbered in accordance with a sequence established by the first identification in the text of the particular table or illustration.

Use the style of the examples below, which are based on the formats used by the US National Library of Medicine in *Index Medicus*. The titles of journals should be abbreviated according to the style used in *Index Medicus*. Consult *List of Journals Indexed in Index Medicus*, published annually as a separate publication by the library and as a list in the January issue of *Index Medicus*.

Try to avoid using abstracts as references; 'unpublished observations' and 'personal communications' may not be used as references, although references to written, not oral, communications may be inserted (in parentheses) in the text. Include among the references papers accepted but not yet published; designate the journal and add 'in press' (in parentheses). Information from manuscripts submitted but not yet accepted should be cited in the text as 'unpublished observations' (in parentheses).

The references must be verified by the author(s) against the original documents. Examples of correct forms of references are given below.

### *Journals*

(1) *Standard journal article* – (List all authors when six or fewer; when seven or more, list only first three and add et al.) Youo CH, Lee KY, Chey RY, Menguy R. Electrogastrographic study of patients with unexplained nausea, bloating and vomiting. *Gastroenterology* 1980; 79: 311–4.

(2) *Corporate author*

The Royal Marsden Hospital Bone-Marrow Transplantation Team. Failure of syngeneic bone-marrow graft with preconditioning in post-hepatitis marrow aplasia. *Lancet* 1977; ii: 242–4.

(3) *No author given*

## TABLES

Type each table double spaced on a separate sheet. Do not submit tables as photographs. Number tables consecutively in the order of their first citation in the text and supply a brief title for each. Give each column a short or abbreviated heading. Place explanatory matter in footnotes, not in the heading. Explain in footnotes all non-standard abbreviations that are used in each table. For footnotes use the following symbols, in this sequence: \*, †, ‡, §, ||, ¶, \*\*, ††...

Identify statistical measures of variations such as standard deviation and standard error of the mean. Do not use internal horizontal or vertical rules. Be sure that each table is cited in the text. If you use data from another published or unpublished source obtain permission and acknowledge fully.

## ILLUSTRATIONS

Figures should be professionally drawn and photographed: freehand or typewritten lettering is unacceptable. Instead of original drawings, roentgenograms, and other material send sharp, glossy black and white photographic prints, usually 127 × 173 mm (5 × 7 in) but no larger than 203 × 254 mm (8 × 10 in). Letters, numbers and symbols should be clear and even throughout and of sufficient size that when reduced for publication each item will still be legible. Titles and detailed explanations belong in the legends for illustrations, not on the illustrations themselves.

Each figure should have a label pasted on its back indicating the number of the figure, author's name, and top of the figure. Do not write on the back of figures or scratch or mark them by using paper clips. Do not bend figures or mount them on cardboard.

Photomicrographs must have internal scale markers. Symbols, arrows or letters used in the photomicrographs should contrast with the background. If composite

or multiple electromicrographs, electrophoresis patterns, etc. are to be included, authors are requested to ensure that all the original photographic plates are of matched densities and contrast.

If photographs of persons are used either the subjects must not be identifiable or their pictures must be accompanied by written permission to use the photograph.

Figures should be numbered consecutively according to the order in which they have been first cited in the text. If a figure has been published acknowledge the original source and submit written permission from the copyright holder to reproduce the material. Permission is required irrespective of authorship or publisher, except for documents in the public domain.

#### LEGENDS FOR ILLUSTRATIONS

Type legends for illustrations double spaced, starting on a separate page, with arabic numerals corresponding to the illustrations. When symbols, arrows, numbers or letters are used to identify parts of the illustrations, identify and explain each one clearly in the legend. Explain the internal scale and identify method of staining in photomicrographs.

#### *Units of Measurement*

Measurements of length, height, weight and volume should be reported in metric units (metre, kilogram, litre) or their decimal multiples. The terms kilobases and base pairs (abbreviations kb and bp) should be used when referring to nucleic acid sequences and the molecular mass of proteins and peptides should be given in kilodaltons (kDa).

Temperatures should be given in degrees Celsius. Blood pressures should be given in millimetres of mercury.

All haematological and clinical chemistry measurements should be reported in the metric system in terms of the International System of Units (SI). Editors may request that alternative or non-SI units be added by the authors before publication.

#### *Abbreviations and symbols*

Use only standard abbreviations. Avoid abbreviations in the title and abstract. The full term for which an abbreviation stands should precede its first use in the text unless it is a standard unit of measurement.
