

NEW! Online Manuscript Submission, Peer Review, and Revision now in place

The *Journal of Paleontology* has adopted a new Web-based manuscript submission, peer-review, and revision system, which will simplify and expedite the publishing process. Authors worldwide can now submit manuscripts to *JP* from any Internet-connected computer, and follow their progress through the peer review process. Reviewers and Editors can use the system in their evaluation of submitted manuscripts. The online system saves paper, mailing costs, and time spent in transit.

Authors who do not have Internet access may continue to submit their manuscripts via mail or courier, but their submissions must include electronic files for both the manuscript text and figures. In these cases, the *JP* editorial staff will place the manuscripts into the online system, so these authors will still benefit from its streamlined review and editorial process.

The *Journal of Paleontology* will use AllenTrack, which is maintained by Allen Press in Lawrence, Kansas. Allen Press typesets, prints, and publishes scientific, technical, and medical journals, books, online publications, and CD-ROMs for more than 300 societies and organizations, including the Paleontological Society.

Access to manuscripts is controlled by login and user privileges, and manuscripts are not accessible to anyone but those authorized to see them.

Submitting manuscripts to *JP*:

- Go to <http://journalofpaleontology.allentrack.net>. The first time that you use the system, you must register for an account. You can then use your account login and password when you return to the site to check on the status of your manuscript.
- When you enter the system, you will have two options: "Submit Manuscript" or "Online Submission Instructions". After you submit a manuscript, you will have a third option that links you to information on your submission.
- After your files are uploaded to the database, they are converted to PDF files that can be viewed, downloaded, and printed. Most word-processing files (e. g., Word, WordPerfect, text, Postscript, and rich text format) are convertible. Figures can be uploaded in JPEG, TIFF, GIF, EPS, PDF, or Postscript formats. Converting files usually takes from five to ten minutes, but sometimes a large file will take longer.
- The system will ask you to confirm that the files have converted correctly. Your manuscript will be considered officially submitted only after the system receives your confirmation.
- As you go through the steps, pay attention to red arrows. They mean that you need to take action on something.
- After a manuscript is in the system, it is assigned a manuscript number, and enters the peer-review process.
