

Neural Networks and Qualitative Physics

A Viability Approach

JEAN-PIERRE AUBIN

This book is devoted to mathematical methods.
£29.95 net HB 0 521 44532 9 288 pp. 1994

The Theory of Finite Linear Spaces

Combinatorics of Points and Lines

L. M. BATTEN and A. BEUTELSPACHER

This is the first comprehensive text to cover finite linear spaces.

£30.00 net HB 0 521 33317 2 240 pp. 1994

Computational Geometry in C

JOSEPH O'ROURKE

This is the first textbook suitable for introducing undergraduate students to the design of geometry algorithms.

£35.00 net HB 0 521 44034 3 358 pp. 1994

£16.95 net PB 0 521 44592 2

Mathematics, Machines, and Gödel's Proof

NATARAJAN SHANKAR

This book describes the use of computer programs.

£25.00 net HB 0 521 42027 X 248 pp. 1994

Cambridge Tracts in Theoretical Computer Science 38

Arithmetic of Blowup Algebras

WOLMER V. VASCONCELOS

This volume is a reference guide to the theory of Rees algebras and related topics.

£22.95 net PB 0 521 45484 0 352 pp. 1994

London Mathematical Society Lecture Note Series 195

Special price for LMS Members £17.21

Locally Presentable and Accessible Categories

J. ADAMEK and J. ROSICKY

This book provides an exposition of both the theory and the applications of these categories at a level accessible to graduate students.

£25.00 net PB 0 521 42261 2 330 pp. 1994

London Mathematical Society Lecture Note Series 189

Special price for LMS Members £18.75

Now in paperback

Algebraic Graph Theory

Second Edition

NORMAN BIGGS

In this substantial revision of his excellent book Professor Biggs has clarified and updated the text, whilst leaving the structure unchanged.

£14.95 net PB 0 521 45897 8 210 pp. 1994

Cambridge Mathematical Library

Categories for Types

ROY L. CROLE

This textbook explains the basic principles of categorical type theory and the techniques used to derive categorical semantics for specific type theories.

£40.00 net HB 0 521 45092 6 320 pp. 1993

£14.95 net PB 0 521 45701 7

Microlocal Analysis for Differential Operators

An Introduction

ALAIN GRIGIS and JOHANNES SJÖSTRAND

This book corresponds to a graduate course given many times by the authors, and will be useful to mathematicians and theoretical physicists.

£19.95 net PB 0 521 44986 3 176 pp. 1994

London Mathematical Society Lecture Note Series 196

Special price for LMS Members £14.96

The Algebraic Characterization of Geometric 4-Manifolds

J. A. HILLMAN

This book describes work on the characterisation of closed 4-manifolds.

£19.95 net PB 0 521 46778 0 187 pp. 1994

London Mathematical Society Lecture Note Series 198

Special price for LMS Members £14.96

Reissue

Methods of Algebraic Geometry

The late W. V. D. HODGE and D. PEDOE

Together, these books give an insight into algebraic geometry that is unique and unsurpassed.

Volume 1 £14.95 net PB 0 521 46900 7 448 pp. 1994

Volume 2 £14.95 net PB 0 521 46901 5 416 pp. 1994

Volume 3 £14.95 net PB 0 521 46775 6 348 pp. 1994

Cambridge Mathematical Library

INSTRUCTIONS TO AUTHORS

1 *Submission of typescripts*

Two copies of the manuscript should be submitted to one of the four Executive Editors (addresses on outside front cover). Papers may also be submitted electronically to those Executive Editors with electronic mail addresses. The editor will acknowledge receipt of the manuscripts. **It is important that authors inform the editor of any changes of address whilst their paper is under consideration.**

2 *Typescript*

Papers should be typed, double-spaced, on one side only and with generous margins. The pages must be numbered.

The first page should give the title, the author's name and institution, and a short abstract intelligible to mathematicians.

The title, while brief, must be informative (e.g. *A new proof of the ergodic theorem*, whereas *Some applications of a theorem of Birkhoff* would be useless).

3 *Notation*

It is important that mathematicians expressions are clear to a printer (who is not a mathematician). For instance, n_k (n sub k) is common usage, but avoid if possible using c sub n sub k . Fractions are generally best expressed by a solidus. Complicated exponents like

$$\exp \{z^2 \sin \theta / (1 + y^2)\}$$

should be shown in this and no other way.

In the typescript, italics, small capitals and capitals are specified by single, double and triple underlining. Bold-faced types is shown by wavy underlining.

It helps if displayed equations or statements which will be quoted later are numbered in order on the right of their line. They can then be referred to by, for example, 'from (7)'.
The author must enable the printer (if necessary by pencilled notes in the margin) to distinguish between similar symbols such as o , O , o , O , 0 ; x , X , \times ; ϕ , Φ , \emptyset ; 1 , 1 ; ϵ , ϵ ; κ , k .

There is no need to underline Greek or script letters provided these are clearly typed. Any special symbols should be explained on a separate sheet of directions for the printer.

If an author wishes to mark the end of the proof of a theorem, the sign \square may be used.

Footnotes should be avoided.

4 *Diagrams*

Figures and drawings should be on separate sheets

in black ink. Photocopies are acceptable only if they are as clear as the originals. *Symbols, legends and captions should be given on a transparent overlay.* Each text figure must be numbered as Figure 1, Figure 2, ... and its intended position clearly indicated in the typescript. The author's name in pencil must be on all separate sheets of diagrams.

A figure is expensive to reproduce and should be included only when the subject matter demands it, or when it greatly clarifies the exposition.

The publisher recognizes that some authors do not have the facilities for producing drawings of a sufficiently high standard to be reproduced directly and is therefore willing to have such diagrams redrawn, provided that they are clear.

5 *Tables*

Tables should be numbered (above the table) and set out on separate sheets. Indicate the position of each in the text as for figures.

6 *References*

References should be collected at the end of the paper numbered in alphabetical order of the author's names. A reference to a book should give the title, in italics, and then in roman type the publisher's name and the place and year of publication;

[4] N. Dunford & J. T. Schwartz *Linear Operators* Part I. Wiley: New York, 1958.

A reference to a paper should give in italics the title of the periodical, the number of the volume and year, and the beginning and end pages of the paper. Titles should be abbreviated as in *Mathematical Reviews*:

[6] J. E. Littlewood. The 'pits effect' for functions in the unit circle. *J. Analyse Math.* **23** (1970), 236–268.

7 *Proofs*

Authors receive one set of proofs for correction. If excessive alterations to the original manuscript are requested after the paper has been typeset, the author will be charged the cost of resetting. For papers with more than one author the proofs are sent to the first named author unless the editor receives other instructions. **It is important that proofs are corrected and returned promptly.**

8 *Reprints*

There are 100 reprints, free of charge, for each paper. For papers with several authors these reprints are divided between the authors. There are no page charges.

Ergodic theory and dynamical systems

VOLUME 14 PART 3 SEPTEMBER 1994

CONTENTS

<i>Bellow A., Jones R. and Rosenblatt J.</i> Almost everywhere convergence of convolution powers	415
<i>Bruin H.</i> Topological conditions for the existence of invariant measures for unimodal maps	433
<i>De Angelis V.</i> Polynomial beta functions	453
<i>Góra P.</i> Properties of invariant measures for piecewise expanding one-dimensional transformations with summable oscillations of derivative	475
<i>Hamenstädt U.</i> Regularity at infinity of compact negatively curved manifolds	493
<i>Jones R. L. and Wierdl M.</i> Convergence and divergence of ergodic averages	515
<i>Kraft R. L.</i> One point intersections of middle- α Cantor sets	537
<i>Langevin R. and Walczak P. G.</i> Entropy, transverse entropy and partitions of unity	551
<i>Levin G.</i> On Mayer's conjecture and zeros of entire functions	565
<i>Lyons R.</i> Equivalence of boundary measures on covering trees of finite graphs	575
<i>Morita T.</i> Periodic orbits of a dynamical system in a compound central field and a perturbed billiards system	599
