MARCH/APRIL 1980

NEW MONTHLY AIRCRAFT SERIES

If you think you know about aircraft, try these questions.

1. What was the first monoplane in production for the RAF?

The answer's in "Bombers of World War II" Part 2.

2. Which flying boat had eight engines and nine wings?

The answer's in "Aerial Oddities."

3. What fighter can alter its pitch attitude or flight trajectory independently of each other?

The answer's in "Modern Fighters Part 2."

4. Which jet airliner had a nose and flight deck based on that of the Comet?

The answer's in "Early Jetliners."

5. What was the only jet airliner in use in 1957?

The answer's in "Early Jetliners."

On March 27th a massive new series will be launched on all the world's aircraft. Published monthly, it will contain over 2,000 entries and illustrations by a team of twenty of the world's leading aircraft writers, photographers and illustrators. Each monthly magazine carries no advertising – just fact – and covers a specific theme – "Early Jetliners," "Modern Jetliners," "Wide-Bodied Jets and Jumbos" etc. Eventually you will be able to build up a detailed collection of all significant civil and military aircraft of the last 80 years. Full colour appears throughout and the series features a wealth of previously unpublished material from major manufacturers and private collections from around the world. Early Jetliners is just published, price £1.65.

In Concorde we see the best example of an 'advanced flight deck' in use in a civil aircraft today. In their paper 'The Advanced Flight Deck' in this issue, Wilson and Hillman discuss the most significant factors influencing the development of transport aircraft flight decks; the demise of the radio operator and navigator with the trend to more automation of flight control and system management, leading to two-crew operation of most short-medium range civil aircraft, and the continuing improvement of flight safety standards.

The cover picture shows a British Airways Concorde at London Heathrow Airport.
