Introduction to Cancer Biology

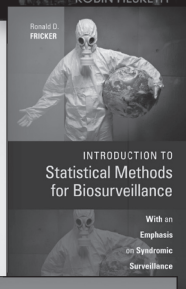

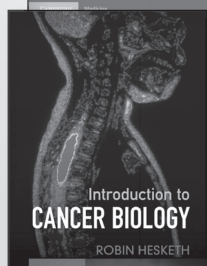

ROBIN HESKETH

“In the era of internet access and publication databases, it is very challenging to introduce a book which is really useful both for new students and established practitioners. Robin Hesketh has succeeded remarkably well in doing so.”

Introduction to Statistical Methods for Biosurveillance

With an Emphasis on Syndromic Surveillance

RONALD D. FRICKER

This book discusses the design and evaluation of statistical methods for effective biosurveillance for readers with minimal statistical training. Weaving public health and statistics together, it presents basic and advanced methods with a focus on empirically demonstrating added value. Although the emphasis is on epidemiologic and syndromic surveillance, the statistical methods can be applied to a broad class of public health surveillance problems.

Preventing and Treating Missing Data in Longitudinal Clinical Trials

A Practical Guide

CRAIG H. MALLINCKRODT

This book focuses on the prevention and treatment of missing data in longitudinal clinical trials. The author offers a practical guide to key principles and explains analytic methods for the non-statistician using limited statistical notation and jargon. The book's goal is to present a comprehensive strategy for preventing and treating missing data, and to make available the programs used to conduct the analyses of the example dataset.

Genomic Clinical Trials and Predictive Medicine

RICHARD M. SIMON

This book focuses on novel approaches that provide a reliable basis for identifying which patients are likely to benefit from each treatment. Aimed at both clinical investigators and statisticians, it covers the development and validation of prognostic and predictive biomarkers and their integration into clinical trials.
