Highlights in Plasma Physics

Three-dimensional picture of a flux surface of an $l = 2$ stellarator. The elliptical cross section rotates poloidally when traversing toroidally.

W. D. D'haeseleer, W. N. G. Hitchon, J. D. Callen, J. L. Shohet

Flux Coordinates and Magnetic Field Structure

A Guide to a Fundamental Tool of Plasma Theory

1991. XII, 241 pp. 40 figs. (Springer Series in Computational Physics) Hardcover DM 158,- ISBN 3-540-52419-3

Flux Coordinates and Magnetic Field Structure gives a systematic and rigorous presentation of the mathematical framework and principles underlying the description of magnetically confined fusion plasmas. After a brief treatment of vector algebra in curvilinear coordinate systems the book introduces concepts such as flux surfaces, rotational transforms, and magnetic differential equations. The various specific types of coordinate system are dealt with in detail. Researchers and advanced students in plasma physics, electromagnetics, and mathematical physics will greatly benefit from this useful guide and reference book.

A. L. Peratt

Physics of the Plasma Universe

1991. Approx. 250 pp. 208 figs. Hardcover DM 148,- ISBN 3-540-97575-6

During the past decade our understanding of plasma physics has witnessed an explosive growth due to research in two areas: work directed toward controlled nuclear fusion and work in space physics. This book addresses the growing need to apply these complementary discoveries to astrophysics. Today plasma is recognized as the key element to understanding the generation of magnetic fields in planets, stars and galaxies, the acceleration and transport of cosmic rays, and many other phenomena occurring in interstellar space, in radio galaxies, stellar atmospheres, quasars, and so forth.

Contents: Cosmic Plasma Fundamentals. - Birkeland Currents in Cosmic Plasma. - Biot-Savart Law in Cosmic Plasma. - Electric Fields in Cosmic Plasma. - Double Layers in Astrophysics. - Synchrotron Radiation. - Transport of Cosmic Radiation. - Particle-in-Cell Simulation of Cosmic Plasma. - Appendix A. Transmission Line Fundamentals in Space and Cosmic Plasmas. - Appendix B. Polarization of Electromagnetic Waves in Plasma. - Appendix C. Dusty and Grain Plasmas. - Appendix D. Some Useful Relations. - References. - Author Index. - Subject Index.

JOURNAL OF
PLASMA PHYSICS

https://doi.org/10.1017/S0022377800016184 Published online by Cambridge University Press

JOURNAL OF PLASMA PHYSICS exists for the publication of experimental and theoretical research papers on plasma physics and its applications.

EDITOR
DR J. P. DOUGHERTY
Department of Applied Mathematics and Theoretical Physics, University of Cambridge, Silver Street, Cambridge CB3 9EW, England

ASSOCIATE EDITORS
PROF. D. BERSHADER
Department of Aeronautics and Astronautics, Stanford University, Stanford, California 94305, *USA*

DR E. INFELD
Institute of Nuclear Research, Hoza 69, *PL*-00-681, *Warsaw, Poland*

PROF. P. K. KAW
Institute for Plasma Research, Bhat, Gandhinagar 382 424, *India*

Authors wishing to have papers published in the JOURNAL should communicate them to any one of the persons named above, choosing one in their own country where possible.

Authors are urged to ensure that their papers are written clearly and attractively, in order that their work will be readily accessible to readers.

Manuscripts should be typed in double spacing on one side of the paper only, with references listed at the end in alphabetical order of authors. Drawings should be done in Indian ink on plain white or transparent paper, and should not be larger than 15 in. by 24 in. Lettering should be shown clearly in pencil for reproduction by the printer, and as far as possible information relating to a figure should be placed in the caption rather than on the figure. A typed list of captions should be provided at the end of the manuscript. Proofs of papers from overseas will usually be despatched to authors by airmail. There is no charge for publication. Authors are entitled to receive 50 offprints of a paper in the JOURNAL free of charge, and additional offprints can be purchased if ordered in advance.

Copying

This journal is registered with the Copyright Clearance Center, 27 Congress St., Salem, Mass. 01970. Organizations in the USA who are also registered with C.C.C. may therefore copy material (beyond the limits permitted by sections 107 and 108 of US copyright law) subject to payment to C.C.C. of the per copy fee of $05.00. This consent does not extend to multiple copying for promotional or commercial purposes. Code 0022–3778/91 $5.00 + .00.

ISI Tear Sheet Service, 3501 Market Street, Philadelphia, Pennsylvania 19104, USA, is authorized to supply single copies of separate articles for private use only.

For all other use, permission should be sought from Cambridge or the American Branch of Cambridge University Press.

JOURNAL OF PLASMA PHYSICS (ISSN 0022-3778) is published once every two months in February, April, June, August, October and December, by Cambridge University Press, The Edinburgh Building, Shaftesbury Road, Cambridge CB2 2RU and Journals Department, 40 West 20th Street, New York, NY 10011–4211.

Three parts form a volume. The subscription price (which includes postage) of Volumes 45 and 46 (1991) is £115.00 net UK, £117.00 elsewhere per volume (US $239.00 in the USA and Canada) for institutions; £57.50 (US $175.00) per volume for individuals. Single parts cost £39.00 each (US $79.00 in the USA and Canada) plus postage. All orders must be accompanied by payment.

Copies of the journal for subscribers in the United States of America and Canada are sent by air to New York to arrive with minimum delay.

Second class postage paid at New York, NY, and at additional mailing offices. *POSTMASTER*: send address changes in USA, and Canada to *Journal of Plasma Physics*, Cambridge University Press, 110 Midland Avenue, Port Chester, New York, NY 10573–9864.

CONTENTS TO VOLUME 46

PART 1 AUGUST 1991

Electron-acoustic instability driven by a field-aligned hot electron beam. R. BHARUTHRAM 1

Weyl's theorem for magnetohydrodynamics. G. P. ZANK 11

Nonlinear surface Alfvén waves. N. F. CRAMER 15

Magnetic field intensification and formation of field-aligned current in a non-uniform magnetic field. H. MURATA 29

Drift instability in the presence of a parallel electric field and an inhomogeneous magnetic field: particle aspect analysis. M. S. TIWARI and P. VARMA 49

Numerical simulations of BGK modes. L. DEMEIO and J. P. HOLLOWAY 63

Instability of intensely propagating circularly polarized electromagnetic pulses in a two-component plasma. R. E. KATES and D. J. KAUP 85

Scattering of electromagnetic waves by hybrid waves in a two-electron-temperature plasma. S. K. SHARMA and S. SUDARSHAN 99

Parametric instabilities of circularly polarized large-amplitude dispersive Alfvén waves: excitation of parallel-propagating electromagnetic daughter waves. A. F. VIÑAS and M. L. GOLDSTEIN 107

Parametric instabilities of circularly polarized large-amplitude dispersive Alfvén waves: excitation of obliquely-propagating daughter and side-band waves. A. F. VIÑAS and M. L. GOLDSTEIN 129

Bistability of a forced hydromagnetic cavity. L. NOCERA and E. R. PRIEST 153

A physical description of magnetic helicity evolution in the presence of reconnection lines. A. N. WRIGHT and M. A. BERGER 179

PART 2 OCTOBER 1991

Scattering of circularly polarized electromagnetic waves off a straight electron beam propagating along a constant magnetic field. A. BOGDANOV 201

Theory of nonlinear interaction of particles and waves in an inverse plasma maser. Part 1. Collision integral. V. S. KRIVITSKY and S. V. VLADIMIROV 209

https://doi.org/10.1017/S0022377800016184 Published online by Cambridge University Press

Theory of nonlinear interaction of particles and waves in an inverse plasma maser. Part 2. Stationary solution and evolution of initial distributions. V. S. KRIVITSKY and S. V. VLADIMIROV 219

On the decay of a dipole pump wave to half-harmonics. J. A. HEIKKINEN, T. J. H. PÄTTIKANGAS and G. DEVILLERS 231

Observations of low-frequency oscillations during relativistic-electron-beam–plasma interactions. A. S. PAITHANKAR and G. P. GUPTA 237

On the existence of ion-acoustic double layers in negative-ion plasmas. S. BABOOLAL, R. BHARUTHRAM and M. A. HELLBERG 247

A generalization of the Taylor constraint to the advection of axi-symmetric poloidal magnetic fields. P. A. WATTERSON 255

Analytical solutions for the current driven by a rotating magnetic field in a spherical plasma. P. A. WATTERSON 271

Parametric excitation of surface waves in a strongly inhomogeneous plasma. G. BRODIN and J. LUNDBERG 299

The effect of cosmic rays on the instability of a tangential discontinuity. S. V. CHALOV 309

Modulational instability produced by Alfvénic turbulence in a collisionless plasma. H. HAMABATA 319

Plasma maser theory of the extraordinary mode in the presence of Langmuir turbulence. S. N. SARMA, K. K. SARMA and M. NAMBU 331

Space-dependent quasi-linear theory of lower-hybrid waves. E. CANOBBIO and R. CROCI 347

PART 3 DECEMBER 1991

Kinetic theory of cross-modulation in a weakly ionized plasma. A. J. M. GARRETT 365

Convection in a plasma with opposed temperature and density gradients. L. NOCERA 391

Resistive tearing-mode instability in a current sheet with equilibrium viscous stagnation-point flow. T. D. PHAN and B. U. Ö. SONNERUP 407

Magnetic fluctuations and kinetic equations in a two-species plasma. A. DI VITA 423

Resistive evolution of a force-free plasma to equilibrium. A. S. GILL and E. W. LAING 437

Amplification of nonlinear surface waves in an inhomogeneous transition layer. G. BRODIN and O. M. GRADOV 459

https://doi.org/10.1017/S0022377800016184 Published online by Cambridge University Press

Low-frequency instability excited by a mesh grid in a double-plasma device. J. CHUTIA, S. SATO, H. KUBO and Y. NAKAMURA 463

Guiding-centre orbits for particles in cross-field devices. S. RIYOPOULOS 473

An exact formula for the thermal and particle diffusivities based on the diffusive transport model in tokamak plasmas. C. JANICKI 487

General dispersion relation for surface waves on a plasma–vacuum interface: an image approach. G. W. ROWE 495

AUTHOR INDEX TO VOLUME 46 513

https://doi.org/10.1017/S0022377800016184 Published online by Cambridge University Press
