

Editors: B.R. Gaines (Canada) and J.H. Boose (U.S.A.)

**Knowledge Acquisition** aims to provide those developing knowledge-based systems with access to state-of-the-art research on tools, techniques, methodologies, and foundations for knowledge acquisition from experts, texts, and other sources of human knowledge. The emphasis of this journal is on the support of human knowledge processes through advanced knowledge-based systems, and particularly on the elicitation and modelling of knowledge in those systems derived from more conventional sources.

## **COVERAGE INCLUDES**

Elicitation/modelling of expertise: systems that obtain and model knowledge from experts • Integration of knowledge from multiple experts or other sources • Apprenticeship, explanationbased, and other learning systems • Extraction/ modelling of knowledge from text • Integration of knowledge acquisition techniques within a single system • Issues in cognition and expertise that affect the knowledge acquisition process

Publication: Volume 1, 1989, Quarterly Institutional Rate: U.S.\$120.00(Overseas)/ £60.00(U.K.only) Personal Rate: U.S.\$49.00(Overseas)/ £24.00(U.K.only)

## FORTHCOMING CONTENTS

A survey of knowledge acquisition techniques and tools. J.H. Boose • Social and cognitive processes in knowledge acquisition. B.R. Gaines • Using three minimallybiasing elicitation techniques for knowledge acquisition. M. A. Meyer, S. M. Mniszewski, and A.T. Peaslee • Conceptual models of interactive knowledge acquisition tools. M. A. Musen • Extracting lexical knowledge from dictionary text. B.M. Slator • Acquisition of associative knowledge by frustration-based learning in an auxilliaryline problem. M. Suwa and H. Motoda • A framework for the validation of knowledge acquisition. I. Benbasat and J.S. Dhaliwal • Recent progress in Aquinas: a knowledge acquisition workbench. J.H. Boose, D.B. Shema, and J.M. Bradshaw • A new look at inference engine synthesis. M. J. Freiling and C. Jacobson . A method for acquiring strategic knowledge. T. Gruber • Towards a second generation knowledge acquisition tool. M. Linster

## AN INTRODUCTION TO RAY TRACING

Edited by Andrew Glassner

June 1989, c.368 pages, ISBN: 0.12.286160.4, £25.00

An Introduction to Ray Tracing develops from fundamental principles of creating "photo-realistic images" in Computer Graphics to advanced applications, providing "how-to" procedures as well as a detailed understanding of the scientific foundations of Ray Tracing. It is also heavily illustrated with colour and black-and white plates.

## FRACTALS EVERYWHERE

### Michael Barnsley

1988, 408 pages, ISBN: 0.12.079062.9, £25.00

This book is a text for a first course in deterministic fractal geometry and its applications, and includes theory, discussion, program listing and exercises. It has been used for a course in fractal geometry with a prerequisite of only advanced mathematics. The development provides both the theorems and their intuitive basis. The text is beautifully illustrated with figures and colour plates.

### INTRODUCTION TO PARALLEL PROGRAMMING Steven Brawer

June 1989, c.409 pages, ISBN: 0.12.128470.0, £25.00(tentative)

This book is the first practical guide to parallel programming written for the applications programmer with no experience in parallel programming and no formal computer science training. You will find all the basic concepts illustrated by examples in a simplified FORTRAN.

# New Title in APIC Series ...

# THE COMPLEXITY OF BOOLEAN NETWORKS Paul E. Dumne

1988, 512 pages, ISBN: 0.12.224460.5, £24.00

Work on Boolean functions has laid the foundations of a complexity theory which is now recognised as a fundamental concern for modern computational complexity theory. This book surveys the literature of Boolean network complexity to the present day, providing a comprehensive treatment of the topic.

## A GUIDEBOOK TO FORTRAN ON SUPERCOMPUTERS

John M. Levesque and Joel W. Williamson

1988, 218 pages, ISBN: 0.12.444760.0, £25.00

This book, the first of its kind, explains in detail both the underlying architecture of today's supercomputers and the manner by which a compiler maps FORTRAN code onto that architecture. Most important, the constructs preventing full optimizations are outlined, and specific strategies for restructuring a program are provided.

## New Series ...

## KNOWLEDGE BASED SYSTEMS

Series Editors: B.R. Gaines and J.H. Boose

1988, Vol. 1: 360 pages, ISBN: 0.12.273251.0, £16.95 Vol. 2: 384 pages, ISBN: 0.12.115920.5, £16.95

In volume 2, Knowledge Acquisition Tools for Expert Systems, the results of leading tool-oriented projects in knowledge acquisition are dealt with. The companion volume, Knowledge Acquisition for Knowledge-Based Systems, presents more fundamental research into problems of knowledge acquisition.

### CASE-BASED PLANNING Viewing Planning as a Memory Task Kristian J. Hammond

**Perspectives In Artificial Intelligence Series** 

April 1989, 304 pages, ISBN: 0.12.322060.2, £22.00

This work presents a theory of planning called Cased-Based Planning that suggests the use of a planner's dynamic memory of experience rather than a static base of rules. These ideas of memory, learning, and planning are implemented in the domain of Szchwan cooking.

## New Titles in Computers and People Series ...

## COGNITIVE ENGINEERING IN COMPLEX DYNAMIC WORLDS

Edited by E. Hollnagel, G. Mancini and D. Woods

1988, 330 pages, ISBN: 0.12.352655.8, £17.50

In this book the authors focus on the cognitive processes involved in decision making and problem solving of operators vis-a-vis complex dynamic systems, and how these functions might be supported by AI and Knowledge Based Systems.

# COGNITIVE PSYCHOLOGY OF PLANNING J. M. Hoc

1988, 200 pages, ISBN: 0.12.350770.7, £20.00

The aim of this book is to furnish a theoretical framework for greater understanding of current knowledge in psychology and AI. It is unique in its integrated and interdisciplinary perspective.

## WORKING WITH COMPUTERS

Edited by G.C. van der Veer, T.R.G. Green, J.M. Hoc and D. Murray

1988, 300 pages, ISBN: 0.12.711705.9, £15.95

This book deals with computers in work environments and problems concerning the design of the information system rather than the usability of the hardware. The chapters study the relationship betweeen the task domain, the conceptual structure of the information system and the cognitive psychology of the user.

MARKETING DEPARTMENT, 24 - 28 OVAL ROAD, LONDON, NW1 7DX, ENGLAND All prices are subject to change without notice

(AI EDAM): Artificial Intelligence for Engineering Design, Analysis and Manufacturing is a journal intended for engineers and designers who see artificial intelligence technologies as powerful tools for handling difficult engineering problems and for research workers in artificial intelligence and computer science who are interested in applications of artificial intelligence and in the theoretical issues that arise from such applications. The Editor is particularly seeking articles that develop new and interesting applications based on the most up-to-date research in chemical, civil, industrial and mechanical (i.e. non-VLSI) engineering. Specifically, the Journal is interested in the use of artificial intelligence in planning, design, finite element analysis, simulation, spatial reasoning and graphics, process planning, optimization and manufacturing. Areas of special interest include: expert (knowledge-based) systems, including knowledge acquisition and representation, control, and system architectures; spatial reasoning and the integration of graphics and solid modelers; artificial intelligence languages and machines, including exploratory programming environments and expert system shells.

## **INSTRUCTIONS FOR AUTHORS**

### Submission of manuscripts

Three (3) copies of articles, in English, should be submitted to the Editor. Research briefs and books for review should be submitted to the appropriate section editor.

### **Typescripts**

Paper should be typed in double spacing throughout, including tables, footnotes, references and legends to tables and figures. One side of the paper, only, should be used and there should be a margin of at least 2.5 cm all round. The position of tables and figures should be clearly indicated, in sequence, in the text. Tables, footnotes and legends to figures should be typed separately. Where it is essential for clear cross-referencing, particularly in mathematicallyorientated material, paragraphs and subparagraphs may be numbered, and the decimal system should be used, i.e. 1.1.1., 1.1.2., etc. A short running title of not more than 40 characters (including spaces) should be indicated if the full title is longer than this. The name of the laboratory where the work has been carried out should be indicated on the title page and the full postal address for the despatch of proofs and offprints should be included on a separate page. Photocopies of typescripts will not be accepted for publication. For refereeing purposes only, good photocopies may be submitted. Upon acceptance of the manuscript the top copy and the original illustrations should be submitted for publication.

### Abstract

An abstract will be printed at the head of all papers: this should not exceed 300 words, and should be intelligible to the general reader without reference to the main text. Abbreviations should be avoided.

### Author biographies

Brief author biographies will be printed at the end of each paper: they should not exceed 100 words for each author.

### Conventions

References should be listed alphabetically by first author at the end of the paper. All authors' names should be given, followed by the year of publication, the full title of the journal, volume, issue number, and inclusive page numbers. For books, the full title should be given, followed by the volume number (if any), page numbers, place of publication and publisher. Citations in the text should read: Brown, Smith & Robinson (1973). Where there is more than one author all names should be given when first mentioned and subsequently thus: Brown *et al.* (1973). The convention Brown (1973*a*), Brown (1973*b*) should be used where more than one paper by the author has appeared in the same year. Authors are responsible for checking the accuracy of all references and that all references cited in the text also appear in the list of references at the end of the paper. Examples of the style to be used are:

Reyling, G. Jr 1974. Performance and control of multiple multiprocessor systems. *Computer Design* 13, 81–86.

Enslow, P.H. 1974. *Multiprocessors and Parallel Processing*. New York: John Wiley.

#### Abbreviations

Customary abbreviations will be accepted and the authors are recommended to employ Système Internationale (metric) units. Special and unusual symbols should be clearly identified, especially if handwritten.

### Preparation of illustrations

Artwork, preferably no larger than  $30 \text{ cm} \times 22 \text{ cm}$ , may be submitted in any medium providing that the image is very sharp. When submitting illustrations it should be borne in mind that the page area is  $222 \text{ mm} \times 177 \text{ mm}$  and that computer output and program listings cannot be reduced by more than 20% before the clarity of the image is affected. Authors are requested to use the reverse side of the printout paper and to ensure that conditions, generally, are such as to assist maximum clarity in reproduction. Photographs will be accepted only if the information cannot be presented easily in any other form. Explanation and keys should, as far as possible, be placed in the legends.

### Copyright/offprints

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, exclusive copyright in the paper shall be assigned to the Publisher. In consideration for assignment of copyright, the Publisher will supply 50 offprints of each paper. Further offprints may be ordered at extra cost; the copyright assignment form and offprint order form will be sent with the proofs. The Publisher will not put any limitation on the personal freedom of the author to use material contained in the paper in other works which may be published elsewhere.
