

THE MATHEMATICAL ASSOCIATION

The fundamental aim of the Mathematical Association is to promote good methods of mathematical teaching. A member receives each issue of one or more of *The Mathematical Gazette*, *Mathematics in School*, *Primary Mathematics* (according to the class of membership chosen), together with Newsletters. Reports are published from time to time and these are normally available to members at a reduced rate. Those interested in becoming members should contact MA Headquarters for information and application forms. The address of the Association Headquarters is **259 London Road, Leicester LE2 3BE, UK (telephone 0116 221 0013)**. The Association should be notified of any change of address. If copies of the Association periodicals fail to reach a member through lack of such notification, duplicate copies can only be supplied at the published price. If change of address is due to a change of appointment, the Association will be glad to be informed. Subscriptions should be submitted to the Treasurer via Headquarters. Correspondence relating to **Teaching Committee** should be addressed to TC Chair. The **Association's Library** is housed in the University Library, Leicester.

Views expressed in the *Mathematical Gazette* by authors or advertisers are not necessarily those of the Association.

Advice to authors of notes and articles.

Study the format of articles in the *Gazette*. Please note the format for references, which should be listed in their order of appearance in an article. MSS may be submitted electronically, preferably in pdf format, or, if sent by post, should be typed and two copies included. (Mathematical expressions may be hand written.) Please send electronic files by e-mail. This edition of the *Gazette* was produced on an Acorn machine using TechWriter and Draw.

CONTENTS (continued)

Notes 107.01 to 107.13

A simple integral representation of the Fibonacci numbers	<i>Seán M. Stewart</i>	120
Collatz conjecture: coalescing orbits and conditions on a minimum counterexample	<i>Sur Samtani</i>	123
Archimedes and the ungula	<i>Hollis Williams</i>	127
A geometric telescope revisited	<i>Rajib Mukherjee</i>	128
The final solution of a quasi-palindromic	<i>Hiroshi Ohyama, Koichiro Ike</i>	130
Proving inequalities via definite integration: a visual approach	<i>Nazrul Haque, Ángel Plaza</i>	136
A geometric illustration for infinite sequences and series	<i>Richard G. Ligo</i>	140
An interesting equivalent of squaring the circle	<i>Nick Lord</i>	144
A metric relation on the triangle and the circle	<i>Paul Goron</i>	146
Trapezia whose side-lengths form an arithmetic progression	<i>Moshe Stupel, Victor Oxman</i>	147
The Steiner-Lehmus Theorem à la Ceva	<i>Mowaffaq Hajja</i>	149
The Steiner-Lehmus theorem à la Euclid	<i>Mowaffaq Hajja</i>	153
An interesting generator of Archimedean circles	<i>Nikolaos Dergiades, Quang Hung Tran</i>	155

Teaching Notes

Bicentric polygons, their incircles, circumcircles and the circles between	<i>Paul Stephenson</i>	160
When does $\frac{1}{4}(a + b + c + d)$ give the centre of mass of a quadrilateral?	<i>Nick Lord</i>	162
