

## NEW FROM MIT/BRADFORD BOOKS

► **BEGINNING TO READ**  
THINKING AND LEARNING  
ABOUT PRINT

*Marilyn Jager Adams*

Adams underscores the automatic nature of print perception in skillful readers while contrasting it with the attentive thought required for conceptual learning and understanding.

A Bradford Book 494 pp. \$29.95

► **THE CHILD'S THEORY  
OF MIND**

*Henry M. Wellman*

"*The Child's Theory of Mind* is the first comprehensive and systematic treatment of this fast-growing and exciting research area, namely, the development of the child's understanding of mind." — *John H. Flavell, Stanford University*

A Bradford Book 358 pp. \$35.00

► **LAURA**

A CASE FOR THE MODULARITY OF LANGUAGE

*Jeni E. Yamada*

The case of Laura, a young retarded woman with a testable IQ of 40, addresses the relationships between language and other mental functions. The case shows that language can develop and function in spite of marked, pervasive cognitive deficiencies, and it provides clinical evidence in support of the notion that language is an independent cognitive ability.

*Issues in the Biology of Language and Cognition.*

A Bradford Book 184 pp. \$29.95 (December)

# He-Said-She-Said

Talk as Social Organization  
among Black Children

Marjorie Harness Goodwin

*"Intellectual breadth shines through this book. It makes an important contribution not only to the literatures on language and culture and conversation analysis, but also to the anthropology of urban and Afro-American life and culture, the study of children as social actors, issues of social organization, the analysis of age and gender relations, and folklore."*

—Barrie Thorne

This groundbreaking study describes in detail the complexities of children's communication. By integrating the analysis of conversation with ethnography, Marjorie Harness Goodwin systematically and empirically reveals how a group of urban black children constitute their social world through talk.

cloth \$35.00 paper \$17.50

## NOTES FOR CONTRIBUTORS

Articles, and papers for the Notes and Discussion section, should be sent to The Editor, Dr K. Perera, Department of Linguistics, University of Manchester, Manchester, M13 9PL, UK. All submissions are read by a member of the editorial team to check whether, with regard to readability and content, they are appropriate to send to referees. All eligible manuscripts are then sent, anonymously, to two referees. When the referees' reports are received, each manuscript is evaluated by the editorial team, and the Editor informs the author of their decision. Articles should be written in English and should not normally exceed 24 printed pages (roughly 10,000 words). Typescripts that conform to the following guidelines help to speed the production process. (For a more detailed style sheet, please write to the Editor.)

1. THREE copies should be submitted.
2. Submissions should be typed on A4 paper (or 21.6 cm), on one side of the paper only. The entire text should be double-spaced, with ample margins.
3. Each copy should have a separate title page giving the title, the full names of the author(s) with their affiliations, any acknowledgements, a full address for correspondence and – at the top – a running headline of not more than 40 characters. Other pages in the typescript should NOT carry the author's name.
4. Each copy should have an abstract on a separate sheet (not more than 150 words long for articles and 100 words for notes). The abstract should give the aims of the study, the general method and the principal conclusions.
5. Articles should be clearly divided into appropriately-labelled but unnumbered sections: often, but not necessarily, Introduction, Method, Results, and Discussion. Side headings should be used within these sections, e.g. *Subjects*, *Procedure*, etc.
6. Footnotes, which are expensive to set, should not be used unless absolutely necessary; they should not contain phonetic characters or other special symbols. They should be numbered and listed on a separate sheet at the end of the article.
7. Each table and figure should be on a separate sheet at the end of the article; their position in the text should be clearly indicated. They should have a title and should be numbered independently of any numbered examples in the text. Figures should, if possible, be camera-ready.
8. Ages should be stated in years, months and – if necessary – days, like this: 1;10.22.
9. Phonetic transcriptions should, wherever possible, employ the IPA symbols.
10. Emphasis and technical terms should be marked by double underlining (small capitals). Standard linguistic abbreviations should be in large capitals, e.g. AUX, NP. Language examples in the body of the text should be underlined (italics). Translations and glosses should be given between single inverted commas.
11. References in the body of the text should be made like this:

According to Snow (1990: 698); OR, In the sixties and seventies, several authors published important work on combinatorial speech (Braine, 1963; Miller & Ervin, 1964; Bloom, 1970; Schlesinger, 1974).

Note that such references are in DATE order, not alphabetical order, and that pairs of authors are joined by &.
12. All works referred to should be listed at the end of the article in alphabetical order, as in these examples:

Cruttenden, A. (1986). *Intonation*. Cambridge: C.U.P.  
Karmiloff-Smith, A. (1986). Some fundamental aspects of language development after age five. In P. Fletcher & M. Garman (eds), *Language acquisition: studies in first language development*. Second edition. Cambridge: C.U.P.  
O'Grady, W., Peters, A. M. & Masterson, D. (1989). The transition from optional to required subjects. *Journal of Child Language* 16, 513–29.
