Continuing professional development in psychiatry

Call for Article Proposals

BJPsych Advances, RCPsych's peer-reviewed CPD journal for consultant psychiatrists, invites clinical experts to submit proposals for articles on current ideas, techniques and developments in psychiatry. Articles typically discuss comprehensive, practical approaches to clinical problems and explain the full range of therapeutic options, with useful features like MCOs, summary boxes, and associated commentaries.

To submit a proposal
to the journal, please

Sleep medicine is a truly multidisciplinary field that covers psychiatric, neurological and respiratory conditions. As the field has developed it has become increasingly clear that there is a great deal of overlap between sleep and psychiatric disorders and it is therefore essential for psychiatrists to have some knowledge of sleep medicine. In this issue, Selsick & O'Regan (pp. 273–283) give a brief overview of the range of sleep disorders a psychiatrist might encounter, how they are recognised, investigated and treated, and how they relate to psychiatric conditions.
