The Journal of Laryngology and Otology

(Founded in 1887 by MORELL MACKENZIE and NORRIS WOLFENDEN)

EDITED BY

WALTER HOWARTH

WITH THE ASSISTANCE OF

G. H. BATEMAN R. G. MACBETH V. E. NEGUS
R. SCOTT STEVENSON

1. Original Articles are accepted on the condition that they have not been published elsewhere.
2. Manuscripts should be typewritten, on one side only of the paper, and well spaced.
3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked, and no additional matter added.
4. Blocks illustrating articles are normally paid for by the *Journal*. Authors may, however, be required at the Editor's discretion, to contribute towards the cost of these in cases where this is particularly heavy.
5. Orders for reprints should be sent when returning galley proofs, and for this purpose special forms are supplied.
6. Authors of original communications on Oto-Laryngology in other journals are invited to send a copy, or two reprints, to the *Journal of Laryngology*. If they are willing, at the same time, to submit their own abstract (in English, French, Italian, or German) it will be welcomed.
7. Editorial communications may be addressed to THE EDITOR, *Journal of Laryngology*, c/o HEADLEY BROTHERS, 109 Kingsway, London, W.C.2.
8. The annual subscription is three guineas sterling, post free, and is payable in advance.
9. Single copies will be on sale at 7s. 6d. each; copies of parts up to Vol. LXIII may be purchased at 4s. each.
10. All subscriptions, advertising and business communications should be sent to the publishers, HEADLEY BROTHERS, 109 Kingsway, London, W.C.2.

United States of America

Orders for this *Journal* may be sent either through a local bookseller, or to Messrs. G. E. STECHERT & CO., 31-33 East 10th Street, New York, or they may be sent direct to the publishers, HEADLEY BROTHERS, 109 Kingsway, London, W.C.2, England.

Aurally Speaking

In the measurement of hearing loss, the Pure Tone Audiometer, TF895, conforms to the specification of the Committee on Electro-Acoustics appointed by the Medical Research Council. Each instrument is individually calibrated against N.P.L. determinations and will therefore provide a reading, on a given patient, comparable with that of any other Marconi Audiometer. Orally instructed

through a crystal microphone and high-fidelity earphones, the patient responds via a signal lamp built-in to the instrument panel. Please ask for further information of this improved aid to audiometry.

PURE TONE AUDIOMETER

S·D·2
CLINIC
AUDIOMETER

This instrument offers many unique and valuable features which allow a most comprehensive range of tests to be made. In addition its metered output ensures a constant result under all conditions of voltage and valve life.

It incorporates a reversible manual interruptor, automatic interruptor, calibrated masking, provision for speech tests with or without gramophone records and Recruitment Tests by the loudness balance method, and Luscher's monaural method.

Write for an illustrated brochure giving full details of this superb instrument.

SD-3

**PORTABLE
AUDIOMETER**

Here is a really Portable Audiometer providing the essentials for audiometry and made to the same high standard as the SD/2.

11 fixed frequencies are provided with single zero reference levels for air and bone conduction, calibrated masking, a built-in crystal microphone and a metered output. Facilities are available for Loudness Balance Recruitment Tests.

Write for an illustrated descriptive brochure.

AMPLIVOX MODEL 61 THE CLINICAL AUDIOMETER OF INTERNATIONAL REPUTE

"Messrs. Amplivox were among the first firms to produce an audiometer in this country, and their larger model is one of the best instruments of the kind now made in the world at a competitive price."—The LANCET, 23-12-50.

- Eleven exact test frequencies 125-12,000 c.p.s.
- Simplified hearing loss dial. The same set of figures is read for both bone and air conduction at all frequencies, and for speech.
- Bone conduction tests can be made from 125-4,000 c.p.s.
- Masking Tone calibrated in decibels, permitting accurate control of masking.
- Double Air receivers enable test tones to be switched instantly from ear to ear.
- Speech test circuit monitors speech level, permitting accurate measurement of hearing loss for speech.
- Loudness Balance Control establishes presence of recruitment in monaural deafness.
- Automatic voltage compensator.

Recruitment Test Set accessory establishes presence of recruitment by amplitude modulation, enabling each ear to be tested independently.

Speech Turntable and English-made Harvard Spondee records also available.

Full details are available from the manufacturers who will gladly arrange demonstrations if required.

AMPLIVOX

Model 70

PORTABLE AUDIOMETER

Light . . . Simple . . . Exact

FOR RAPID AND ACCURATE HEARING TESTING AND SCREENING

This new audiometer enables accurate pure tone air conduction tests to be effected from 125-8,000 c.p.s. Light yet robust and extremely simple to operate, the Model 70 answers the demand of Otolologists, Hospitals, Schools and Industry for an inexpensive but accurate audiometer where complete diagnostic features are not necessary.

Uniform zero reference level enables hearing loss control to be set at desired intensity for screening tests, and individual frequencies to be checked in succession without readjustment. A recent survey showed that 10 year old schoolchildren could be individually screened in this way in an average time of 2½ minutes per child. *Full air conduction tests down to threshold can be performed on the same instrument.*

The Model 70 operates on either A.C. or D.C. mains from 100 to 250 volts and the complete instrument weighs only 14 lbs. Price 80 guineas, weatherproof cover 1 guinea.
