

surveillance of epidemiologically important antibiotic resistance are inadequate and need to be improved. Additionally, a more effective national sentinel system involving hospitals and laboratories should be developed.

Working group 3 was chaired by Dr. Walter Hierholzer and examined methods for the control of vancomycin use in hospitals. Among the recommendations were the development of a set of acceptable indications for

primary use of vancomycin, implementation of a system of monitoring vancomycin use with feedback to hospital staff, the development of institutional guidelines to improve blood culture techniques to reduce contamination and inappropriate diagnosis, and institutional programs to improve use of all antibiotics.

The recommendations of the three working groups were presented to HICPAC. HICPAC

recommended 1) that these recommendations be incorporated in an *MMWR* alert that would summarize recent outbreaks of vancomycin-resistant enterococci and encourage the implementation of these recommendations as interim control measures, and 2) that a larger workshop on the general issue of antibiotic resistance be convened. Such a workshop, under the sponsorship of the CDC, is being planned for the fall of 1994.

## 'SHEA' Has a New Meaning

The membership of SHEA has voted unanimously to change the name of the society from The Society for *Hospital* Epidemiology of America to The Society for *Healthcare* Epidemiology of America. The name change reflects the broadening role of hospital epidemiology in the study and prevention of noninfectious diseases adverse outcomes in both the hospital and outpatient settings. The same epidemiological methods

applied to the control of nosocomial infections can be used to better manage noninfectious diseases problems in both inpatients and outpatients.

Our name change is similar to that made by the Joint Commission on Accreditation of Healthcare Organizations (JCAHO), which also changed *Hospital* to *Healthcare*. Like other organizations who have recently changed their names (Centers for

Disease Control and Prevention [CDC] and Association for Professionals in Infection Control and Epidemiology [APIC]), the acronym SHEA will not change with the substitution of *Healthcare* for *Hospital*. The name change reflects our interest in the epidemiological evaluation of performance measures and outcomes research and our ability to collaborate with other organizations concerned with safe and high-quality medical care.

## SHEA Creates Three New Committees

SHEA has created three new committees to work on areas of special concern to the society including finances, long-range planning, and public policy. The Financial Advisory Committee is a new committee of the board, chaired by Dr. Matthew Levison. The Financial Advisory Committee is charged with raising funds for the society and its programs and overseeing the newly created reserve fund.

The Long-Range Planning Committee is a new standing committee of the president, chaired by Past-President Dr. Donald Craven. This committee is charged with strategic or long-range planning and was created to provide for continuous reevaluation and modification of

the strategic plan, rather than having sporadic strategic planning meetings when new developments or crises arise.

The Public Policy Committee also is a standing committee of the president and will be chaired by President-Elect Dr. Bryan Simmons. This committee is charged with the oversight of public policy as it relates to healthcare epidemiology and infection control and with recommending to the board

appropriate responses to pending actions by various legislative bodies that affect the fields of healthcare epidemiology and infection control.

Members of the society who would like to volunteer to serve on these or any other society committees should contact Coley Lyons, Executive Director, SHEA, 875 Kings Highway, Suite 200, Woodbury, NJ 08096; telephone (609) 845-1636; fax (609) 853-0411.

---

*Brief items of interest for the SHEA News or Newsletter may be sent to C. Glen Mayhall, MD, SHEA, Newsletter Editor, Division of Infectious Diseases, Route 1092; The Former Shriner's Burns Bldg, Room 2-64B; University of Texas Medical Branch; Galveston, TX, 77555-1092; FAX (409) 772-6527. Copy should be typed, double-spaced, and should not exceed five pages.*

# NURSE EPIDEMIOLOGIST

Grow professionally and personally at Swedish American Hospital in Rockford, Illinois' second largest city. Here, our 80-bed acute care community teaching hospital, a major referral center serving northern Illinois and southern Wisconsin, will provide you with the opportunity to realize your career ambitions.

We are seeking a BSN (Master's preferred) with certification in infection control and a minimum of 3 years experience. In this position you will recommend, develop, coordinate, supervise and monitor the activities involved in the prevention and control of infectious diseases.

For more information about our shared governance and TQM environment write or call: 815-966-2680 or 1-800-322-4724, Marilyn Wetzel, R.N., B.S., Nurse Recruiter, 1400 Charles Street, Rockford, IL 61104. EOE m/f

# ROOM PRESSURE MONITORING

Room Monitors

Manometers

Switches

Transmitters

Ideal for measuring, controlling, or monitoring very low differential pressures. Applications include tuberculosis isolation rooms, reverse precaution rooms, sputum induction rooms, and aerosol administration areas.

Call or write today.

10 Bearfoot Road  
Northboro, MA 01532  
USA (508) 393-8991  
Fax: (508) 393-8099

# TOURO NURSE EPIDEMIOLOGIST

Put away all of your notions of an infirmary as a small clinic with a few dozen beds. This may have been true of Touro Infirmary when it was established back in 1854, but it is hardly descriptive of today's sophisticated medical complex. Touro, New Orleans' premier 350-bed teaching hospital, is located in the beautiful Garden District of New Orleans, and is within a 15-minute streetcar ride of the historic French Quarter.

Touro Infirmary has an opening for an RN to coordinate our Infection Control program. The successful candidate will act as a resource, consultant, and teacher for nursing and medical staff. S/he will facilitate ongoing data collection and analysis, focus studies and policy updates. Touro's Infection Control program includes acute care, skilled nursing and rehabilitation.

Knowledge of the principles of epidemiology, microbiology and infectious diseases, as well as current OSHA/JCAHO regulations, is required. Current RN licensure and five years experience in Infection Control and certification in Infection Control (or eligibility) are also required.

Our excellent salary and benefit package, including generous vacation and sick leave, pension plan, TSA, health plan, continuing education, RN loan payments, and an on-site fitness center, reflects our commitment to reward excellence.

If you are positive, energetic, have a passion for quality care and are stimulated by change, we want to hear from you! Please contact our Recruiter at 504/897-8900 collect or send your resume to Touro Infirmary, Human Resources, 1401 Foucher St.,

TOURO

When your healthcare team treats Tuberculosis patients, normal protective measures are full of holes. You need to take extra precautions. And one of the best precautions you can take is the ClestraClean™ Air Purification System 525.

Using a patented process, the APS 525 achieves maximum efficiency in the capture and destruction of airborne TB microbes. The specially curved HEPA filter allows high-intensity, germicidal UV light to bathe the entire filtering surface—continuously

killing TB microbes.

And with 99.99% effective filtration, the APS 525 meets guidelines for Airborne Pathogen Removal set by the Centers for Disease Control and Prevention.

So when you're dealing with Tuberculosis, take the extra precaution—the ClestraClean™ Air Purification System 525.

For more information on the APS 525, call 1-800-825-3268 today.

*You'll be breathing easier tomorrow.*

APS 525

**IF YOU THINK  
THIS WILL STOP TB,  
THINK AGAIN.**
