SPACE SCIENCE REVIEWS

is an international journal containing invited review papers on Space Science, defined for the purpose as scientific research carried out by means of rockets, rocket-propelled vehicles and partly also by stratospheric balloons and at observatories on the Earth or Moon. The journal is principally concerned with the purely scientific aspects of the subject, but instrumental and technical aspects also receive attention.

SPACE SCIENCE REVIEWS does not publish original research papers as its purpose is to provide a contemporary synthesis of the situation in the various branches of the subject.

SPACE SCIENCE REVIEWS contains invited papers from authors in every country actively engaged in space research and therefore has the broadest possible international basis. Papers are normally published in English, but papers in French, German and Russian will be accepted. Such papers will be provided with a copious English summary.
