

CAMBRIDGE

## New Titles in Plasma Physics from Cambridge

### Physics of Radio-Frequency Plasmas

Pascal Chabert, Nicholas Braithwaite

\$85.00: Hardback: 978-0-521-76300-4: 350 pp.

### Principles of Plasma Physics for Engineers and Scientists

Umran S. Inan, Marek Gołkowski

“This new book provides an excellent summary of the basic processes occurring in plasmas together with a comprehensive introduction to the mathematical formulation of fluid (MHD) and kinetic theory. It provides an excellent introduction to the subject suitable for senior undergraduate students or entry-level graduate students.”

—Richard M. Thorne, *University of California at Los Angeles*

“The authors have done an excellent job in introducing the vast scope of plasma physics for basic plasma physics courses. The schematic illustrations and flow charts used are especially helpful in understanding the complexities involved in the hierarchal nature of plasmas. Mathematics is kept at just the right level for the intended readers and the descriptions of the physical processes are clear. Although this book is targeted to advanced undergraduate or beginning graduate students, it will be a good addition to the personal library of every plasma physicist.”

—Gurudas Ganguli, *Naval Research Laboratory*

\$99.00: Hardback: 978-0-521-19372-6: 284 pp.

### Turbulence and Shell Models

Peter D. Ditlevsen

Connecting dynamical systems theory and the theory of fully developed turbulence for advanced undergraduates and graduate students, researchers and professionals.

\$80.00: Hardback: 978-0-521-19036-7: 168 pp.

Prices subject to change.

## Instructions for Authors

**Editorial policy** The journal welcomes submissions in any of the areas of plasma physics. Its scope includes experimental and theoretical work on basic plasma physics, the plasma physics of magnetic and inertial fusion, laser–plasma interactions, industrial plasmas, plasma devices and plasmas in space and astrophysics. This list is, of course, merely illustrative of the wide range of topics on which papers are invited, and is not intended to exclude any aspect of plasma physics that is not explicitly mentioned.

Authors are urged to ensure that their papers are written clearly and attractively, in order that their work will be readily accessible to readers. Manuscripts must be written in English. *Journal of Plasma Physics* employs a rigorous peer-review process whereby all submitted manuscripts are sent to recognized experts in their subjects for evaluation. The Editors' decision on the suitability of a manuscript for publication is final.

**Submission of manuscripts** Papers may be submitted to the Editor or any of the Associate Editors, preferably by email in pdf format. When a paper is accepted, the authors will be asked to supply source files in LaTeX or Word. Instructions for the preparation of these files and LaTeX style files are given in the Instructions for Contributors link at [journals.cambridge.org/pla](http://journals.cambridge.org/pla).

**Incremental publishing and DOIs** In order to make articles which have been accepted for publication in *Journal of Plasma Physics* available as quickly as possible, they are now published incrementally online (at Cambridge Journals Online; [journals.cambridge.org](http://journals.cambridge.org)) The online version is available as soon as author corrections have been completed and before the article appears in a printed issue. A reference is added to the first page of the article in the journal catchline. This is the DOI – Digital Object Identifier. This is a global publishers' standard. A unique DOI number is created for each published item. It can be used for citation purposes instead of volume, issue and page numbers. It therefore suits the early citation of articles which are published on the web before they have appeared in a printed issue. See [journals.cambridge.org/pla](http://journals.cambridge.org/pla).

**Proof reading** Only typographical or factual errors may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors.

**Offprints** Corresponding authors will receive a PDF of their article upon publication. Print offprints may be purchased from the publisher if ordered at first proof stage.

**Copying** This journal is registered with the Copyright Clearance Center, 222 Rosewood Drive, Danvers, MA 01923. Organizations in the USA who are also registered with C.C.C. may therefore copy material (beyond the limits permitted by sections 107 and 108 of US copyright law) subject to payment to C.C.C. of the per copy fee of \$16.00. This consent does not extend to multiple copying for promotional or commercial purposes. Code 0022–3778/2010 \$16.00.

*ISI Tear Sheet Service*, 3501 Market Street, Philadelphia, Pennsylvania 19104, USA, is authorized to supply single copies of separate articles for private use only.

Organizations authorized by the Copyright Licensing Agency may also copy material subject to the usual conditions.

*For all other use*, permission should be sought from Cambridge or the American Branch of Cambridge University Press.

# JOURNAL OF PLASMA PHYSICS

VOLUME 77 • PART 2 • APRIL 2011

## Main Articles

- Kinetic theory of transverse plasmons in pair plasmas  
*S. Q. Liu and Y. Liu* 145
- Acceleration of dust particles by vortex ring  
*Zahida Ehsan, N. L. Tsintsadze, J. Vranjes, R. Khan and S. Poedts* 155
- Hot spot generated by non-thermal electrons just before disruption in HT-7 tokamak  
*Erzhong Li, Liqun Hu, Kaiyun Chen, Bili Ling, Yong Liu, Hongwei Lu, Shiyao Lin, Biao Shen and Xiang Gao* 163
- A bicharacteristic formulation of the ideal MHD equations  
*Hari Shanker Gupta and Phoolan Prasad* 169
- Relativistic filamentary equilibria  
*M. Gedalin, A. Spitkovsky, M. Medvedev, M. Balikhin, V. Krasnoselskikh, A. Vaivads and S. Perri* 193
- Parameter regimes for slow, intermediate and fast MHD shocks  
*P. Delmont and R. Keppens* 207
- On the possibility of refraction of dust acoustic waves  
*M. Rosenberg, R. L. Merlino and P. K. Shukla* 231
- Nonlinear decay of dispersive Alfvén wave and solar coronal heating  
*Sanjay Kumar and R. P. Sharma* 237
- Formation of dipolar vortices and vortex streets due to nonlinearly interacting ion-temperature-gradient-driven modes in dense magnetoplasmas  
*Nazia Batool and Arshad M. Mirza* 245
- Stability of an electron beam in a two-frequency wiggler with a self-generated field  
*Soon-Kwon Nam and Ki-Bum Kim* 257
- On ion-dust streaming instability in a collisional magnetized plasma with warm dust  
*M. Rosenberg* 265
- On the drag force on non-spherical dust grain  
*S. I. Krasheninnikov and D. A. Mendis* 271
- Single-species Weibel instability of radiationless plasma  
*L. V. Borodachev and D. O. Kolomiets* 277
