

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editorial Office, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 1991 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using $\mathcal{A}_{\mathcal{M}}\mathcal{S}\text{-}\mathcal{T}_{\mathcal{E}}\mathcal{X}$. Authors who are able to do so are invited to prepare their manuscripts using $\mathcal{A}_{\mathcal{M}}\mathcal{S}\text{-}\mathcal{T}_{\mathcal{E}}\mathcal{X}$. Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on a $5\frac{1}{4}$ IBM PC compatible diskette or via e-mail to ams@maths.uq.edu.au. [Typed manuscripts are, of course, still acceptable.]

Bulletin of the Australian Mathematical Society

Complex blow-up in Burgers' equation: an iterative approach	
Nalini Joshi and Johannes A. Petersen	353
On closed radical orbits in homogeneous complex manifolds	
Bruce Gilligan	363
Polygonal products of polycyclic by finite groups	
R.B.J.T. Allenby	369
Yosida functions and Picard values of integral functions and their derivatives	
Huaihui Chen	373
A note on existence of envelopes and covers	
Jianlong Chen and Nanqing Ding	383
New inequalities for planar convex sets with lattice point constraints	
Poh W. Awyong and P.R. Scott	391
Boundary value problems for systems of differential equations	
H.B. Thompson	397
Parmeterisation of developable surfaces by asymptotic lines	
Vitaly Ushakov	411
On the coercivity of elliptic systems in two dimensional spaces	
Kewei Zhang	423
On the weakly strongly exposed property and some smoothness properties of Orlicz spaces	
Yunan Cui, Henry K. Hudzik and Hongwei Zhu	431
Characterisation of multipliers for the double Henstock integrals	
Tuo-Yeong Lee, Tuan-Seng Chew and Peng-Yee Lee	441
On the Darboux problem of neutral type	
Dariusz Bugajewski and Mirosława Zima	451
Potential operators and multipliers on locally compact Vilenkin groups	
Toshiyuki Kitada	459
Existence theorems for vector variational inequalities	
Aris Danilidis and Nicolas Hadjisavvas	473
On the growth of fundamental groups of nonpositive curvature manifolds	
Yi-Hu Yang	483
Enriched accessible categories	
Francis Borceux and Carmen Quinteriro	489
On the ring of locally bounded Nash meromorphic functions	
Wojciech Kucharz and Kamil Rusek	503
Higher-order optimality conditions for a minimax	
Do Van Luu and W. Oettli	509
On the cohomology of a class of nilpotent Lie algebras	
Grant F. Armstrong and Stefan Sigg	517
