## ABOUT US

### DIFFRACTION DATABASES YOU CAN TRUST

The Powder Diffraction File™ (PDF®) is the  
 only crystallographic database that is  
 specifically designed for material  
 identification and characterization. It is an  
 analysis system that is comprised of  
 crystallographic and diffraction data. These  
 data with embedded data mining and  
 analysis software have been through a quality  
 and classification editorial review system.

### ISO CERTIFIED

The only crystallographic database organization in  
 the world with its Quality Management System  
 ISO 9001:2015 certified by DEKRA.

## KEY POINTS

- ✓ Featuring 541,500+ Entries, including 121,000+ Entries with Atomic Coordinates
- ✓ Combines Powder & Single Crystal Data
- ✓ Digitized Patterns
- ✓ Molecular Graphics
- ✓ Analyze Neutron, Electron, X-ray & Synchrotron Data

## ABOUT PDF-4/Organics

PDF-4/Organics 2021 database is a highly targeted collection, with special focus on materials used in commercial and regulatory fields. It is designed to solve difficult problems that are analyzed by powder diffraction analysis for a multitude of applications in the pharmaceutical, regulatory, specialty chemical, biomaterial, and forensic fields.

The PDF-4/Organics provides the best of both worlds by including single crystal and powder diffraction data together in a single, edited, and standardized database. We not only extract from the public literature like other databases, we add unique content by extracting patent data, combining single crystal and powder references, adding common inorganics and polymers, and continuously adding targeted materials through grants and research proposals.

**VIRTUAL XRD I CLINIC**  
17-21 MAY 2021

## Fundamentals of X-ray Powder Diffraction Virtual Clinic:

17 - 21 May 2021

For the novice with some XRD knowledge or for the experienced with an interest in the theory behind XRD, this clinic offers a strong base for increased lab performance.

The clinic covers instrumentation, specimen preparation, data acquisition and qualitative phase analysis through live demonstrations. It also covers hands-on use of personal computers for demonstration of the latest software including data mining with the Powder Diffraction File (PDF) and use of the powder diffractometer: optical arrangement, factors affecting instrumentation profile width, choice and function of divergence slit, calibration and alignment, detectors, and X-ray optics.

**VIRTUAL XRD II CLINIC**  
24-28 MAY 2021

## Advanced Methods in X-ray Powder Diffraction Virtual Clinic:

24 - 28 May 2021

For the experienced XRD scientist, this session offers enhanced analysis skills through intense problem solving, as well as an introduction to the Rietveld Method. The course emphasizes computer-based methods of data interpretation, both for qualitative and quantitative phase analysis.

The advanced course covers a wide range of topics including systematic errors, factors affecting intensities of diffraction peaks; data reduction algorithms; phase identification; advanced data mining with the PDF and its application in search/match; powder pattern indexing methods; structure solution methods; quantitative phase analysis using both reference intensity ratio (RIR) and Rietveld Method.

## Rietveld Refinement & Indexing Clinic:

27 September - 1 October 2021

Powder pattern indexing and Rietveld structural refinement techniques are complementary and are often combined to determine the structure of a material. Successful indexing of a powder pattern is considered strong evidence for phase purity. Indexing is considered a prelude to determining the crystal structure, and permits phase identification by lattice matching techniques. This clinic introduces the theory and formalisms of various indexing methods and structural refinement techniques along with quantitative analysis. One unique aspect of this clinic is the extensive use of computer laboratory problem solving and exercises that teach method development in a hands-on environment.

## Practical X-ray Fluorescence Clinic:

1 - 5 November 2021

From theory to hands-on exercises, this course offers techniques and skills to improve lab performance. Discover the latest in cutting-edge instruments such as TXRF, hand-held devices, energy dispersive and wavelength dispersive spectrometers through live demonstrations.

The XRF course covers the basics of X-ray spectra; instrumentation design; methods of qualitative and quantitative analysis; specimen preparation and applications for both wavelength and energy dispersive spectrometry. The course emphasizes quantitative methods, use of automated X-ray spectrometers, review of mathematical matrix correction procedures, and new developments in XRF.
