

## Notes for contributors

A submission to Applied Probability is considered as a submission to either *Journal of Applied Probability* (JAP) or *Advances in Applied Probability* (AAP). Longer papers are typically published in AAP, but the assignment of papers between the two journals is made by the Executive Editor on an issue-by-issue basis. Short communications and letters specifically relating to papers appearing in either JAP or AAP are published in JAP.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Submitted papers should be in English. It is the author's responsibility to ensure an acceptable standard of language, and a paper failing to meet this requirement may go back to the author for rewriting before being sent out for review.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2010 Mathematics Subject Classification scheme (<http://www.ams.org/msc/>). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the L<sup>A</sup>T<sub>E</sub>X class file aptpub.cls, available from <http://www.appliedprobability.org/>. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted electronically through ScholarOne at <https://mc.manuscriptcentral.com/apjournals>. All submissions will be acknowledged on receipt.

## Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0021–9002/19

## Volume 57 Number 2

### *Research Papers*

- 385 S. PITZEN AND M. BURKSCHAT. Representations of component importance for coherent systems with exchangeable components
- 407 DANIEL AHLBERG. Tertiles and the time constant
- 409 TUAN-MINH NGUYEN AND STANISLAV VOLKOV. On a class of random walks in simplexes
- 429 JORGE NAVARRO AND JUAN FERNÁNDEZ-SÁNCHEZ. On the extension of signature-based representations for coherent systems with dependent non-exchangeable components
- 441 ELLA HIESMAYR AND ŪMITI ŐLAK. Asymptotic results on hoppe trees and their variations
- 458 ARIEL JAFFE, YUVAL KLUGER, GEORGE C. LINDERMAN, GAL MISHNE AND STEFAN STEINERBERGER. Randomized near-neighbor graphs, giant components and applications in data science
- 477 YURI BAKHTIN AND ZSOLT PAJOR-GYULAI. Tails of exit times from unstable equilibria on the line
- 497 BERTRAND CLOEZ, BENOÎTE DE SAPORTA AND MAUD JOUBAUD. Optimal stopping for measure-valued piecewise deterministic markov processes
- 513 HANSJÖRG ALBRECHER, BOHAN CHEN, ELENI VATAMIDOU AND BERT ZWART. Finite-time ruin probabilities under large-claim reinsurance treaties for heavy-tailed claim sizes
- 531 MITJA STADJE. Two results on dynamic extensions of deviation measures
- 541 CHRISTOPHETTE BLANCHET-SCALLIET, DIANA DOROBANTU AND LAURA GAY. Joint law of an Ornstein–Uhlenbeck process and its supremum
- 559 ALEXISZ TAMÁS GAÁL. Long-range orientational order of random near-lattice hard sphere and hard disk processes
- 578 XIN LIU AND LEI YING. Steady-state analysis of load-balancing algorithms in the sub-Halfin–Whitt regime
- 597 KRZYSZTOF DĘBICKI, ENKELEJD HASHORVA AND ZBIGNIEW MICHNA. Simultaneous ruin probability for two-dimensional brownian risk model
- 613 DANG H. NGUYEN, NHU N. NGUYEN AND GEORGE YIN. Analysis of a spatially Inhomogeneous stochastic partial differential equation epidemic model
- 637 MARTIN WENDLER AND WEI BIAO WU. Central limit theorems for Nearly long range dependent subordinated linear processes
- 657 ONNO BOXMA, ANDREAS LÖPKER AND MICHEL MANDJES. On two classes of reflected autoregressive processes
- 679 DANIELA FLIMMEL, ZBYNĚK PAWLAS AND J. E. YUKICH. Limit theory for unbiased and consistent estimators of statistics of random tessellations
