

"All researchers working in the tropics or who attempt to follow tropical literature will find it essential reading."

GH Orians, Nature

Journal of Tropical Ecology

Editor: David M. Newbery, *University of Stirling*

Journal of Tropical Ecology, first published in 1985, has now become a major international ecological journal. Attractively printed with excellent quality illustrations and tables, it examines the special problems of tropical environments and their proper management. The breadth and quality of papers, the format and price, are also aimed to stimulate the research activities of young ecologists in tropical nations.

Published quarterly by Cambridge University Press, the journal is for all those interested in the biology of the tropics – agriculturalists, foresters, developmental planners, conservationists, and wildlife biologists.

Subscription Information

Journal of Tropical Ecology is published six times a year in January, March, May, July, September and November. Volume 13 in 1997: £126 for institutions; £51 for individuals; £32 for individuals from less developed countries (except Mexico); prices include delivery by air. ISSN 0266-4674.

Introducing...

Bird Conservation International

Published for BirdLife International

An important journal of international conservation

Bird Conservation International is a quarterly journal focusing on the major conservation issues affecting birds—especially globally threatened species—and their habitats. The official journal of BirdLife International, it provides stimulating, international and up-to-date coverage of bird conservation topics critically important in today's world.

Aims

The journal publishes original papers and reviews dealing with all aspects of the conservation of birds in the wild and their habitats. It seeks to promote worldwide research and conservation action to ensure the protection of birdlife and fragile environments.

Why you should read *Bird Conservation International*

With original papers and reviews, Bird Conservation International will keep you informed about endangered bird species, habitat destruction, wildlife trade and recent scientific research findings. In addition, much of the journal's published material has its origins in BirdLife's *Red Data Book research programme* (used by governments and environmental decision makers worldwide) and its *conservation programme of field projects*.

Essential reading for :

- ornithologists
- conservationists
- ecologists
- international researchers

Subscription Information

Bird Conservation International is published quarterly in March, June, September and December. Volume 7 in 1997: £80 for institutions; £38 for individuals; £31 for members of the World Bird Club; prices include delivery by air. ISSN 0959-2709.

Announcing an important new journal...

Environment and Development Economics

Published in association with the Beijer Institute, Royal Swedish Academy of Sciences

Editor: Charles Perrings, *University of York*

Aims and Scope

The aim of *Environment and Development Economics* is to provide a forum for the results of the growing body of research into the linkages between economic development and environmental change. It publishes papers addressed equally to the research and policy communities and is designed to be accessible to a broad readership. The journal will publish not only scientific papers in a section on theory and applications but also environmental policy discussion papers published in a regular Policy Options section. Each issue will include non-technical summaries of all papers in these two sections, and regular book reviews and review essays.

Recent contents

Environmental and trade policies: some methodological lessons

V. KERRY SMITH AND J. ANDRESS ESPINOSA

Macroeconomic policies, second best theory and the environment

M. MUNASINGHE AND K. G. MÄLER

Natural resource degradation effects of poverty and the population growth are largely policy-induced: the case of Colombia

J. HEATH & H. BINSWANGER

Measuring sustainable development: progress on indicators

D. PEARCE, K. HAMILTON AND G. ATKINSON

Coverage includes:

- optimal environmental regulation and incentives in a development context
- the valuation of environmental resources in developing countries and incentives in environmental policy
- environmental effects of institutional change
- modelling interdependent economic and environmental processes

Subscription Information

Published quarterly in February, May, July and October. Volume 2: 1997: £81 institutions; £42 individuals. Airmail included. Special arrangements exist for subscribers in most low-income countries. ISSN 1355-770X.

JMBA

Essential reading for all marine scientists

"This should be in every marine biology collection and all other biology research collections"

MAGAZINES FOR LIBRARIES

Published for the Marine Biological Association of the United Kingdom, JMBA is a key publication in the field. Presenting original research papers on all aspects of marine biology, it focuses on current international research developments and features much of the pioneering work taking place today on major issues concerning marine organisms and their environment. There is rapid publication of short communications.

International Scope

The Editorial Board of JMBA includes members from the UK, Europe, North America, Japan and Australia and the journal contains papers received from authors from many countries, covering all major facets of marine biology. Local studies focus on the seas and shores around Europe and the North Atlantic. Distribution of the Journal is worldwide.

Comprehensive Coverage

JMBA covers a wide range of current topics in marine biology and marine related global problems including:

- ◆ physiology and experimental biology
- ◆ chemical and physical oceanographic work which relates closely to the biological environment
- ◆ biodiversity
- ◆ ecological surveys and population studies of oceanic, coastal and shore communities
- ◆ taxonomy, morphology and life history of marine animals and plants
- ◆ rapidly developing techniques employed at sea for the sampling, recording, capture and observation of marine organisms, and chemical analyses of sea water

Why you should read JMBA

- JMBA is a leading journal in the field of marine biology
- JMBA is an important forum for current research, providing a means of communication between you and others working in your field
- JMBA keeps you up-to-date with the latest findings and opinions of experts in the field
- JMBA gives you full coverage and knowledge of the subject by bringing together all aspects of marine biology in one publication

Subscription

JMBA, Volume 77, 1997 is published quarterly in February, May, August and November: £216; prices include delivery by air. ISSN 0025-3154,

Environmental Conservation – Instructions for Authors

Environmental Conservation is an international quarterly journal which welcomes

- subject reviews (normally <12 000 words),
- research papers (up to 10 000 words; <4000 for rapid processing),
- guest editorials/comments (<1000 words),
- meeting reports (<1000 words), and
- book reviews (<1000 words),

relevant to scientifically-based conservation of the Earth's environment. The main criteria for acceptance of subject reviews and research papers are originality, scientific rigour, comprehensiveness, appeal to a wide readership, and acceptability of style. Research papers may be in the form of experimental, monitoring or other quantitative studies; case histories are also acceptable. Submission of material implies that it is original, has not been published in more than abstract form, is not being considered for publication elsewhere and that, if published in *Environmental Conservation*, copyright will be vested in the Foundation for Environmental Conservation. It is further understood that any regulations or obligations pertaining to acquisition and dissemination of the data have been complied with, and that the underlying work has been conducted in an environmentally and socially responsible manner. Research papers and subject reviews will be stringently refereed, and actively edited where necessary.

Initial presentation of typescripts

Typescripts (no diskette version at this stage) must be double-spaced with wide margins, in English (spelling to follow *The Concise Oxford Dictionary*, 9th Edition, 1995, ISBN 0 19 861319 9) and submitted in triplicate together with one set of originals of any illustrations. Submissions are to be sent directly to the Editor, who will normally acknowledge receipt, but cannot be held responsible for safety in transit. The Editor will upon request provide a cost estimate for improving the English of a text and restyling it as necessary. A case for rapid processing of a paper should be made at submission and assumes appropriate length and style. The first page must include in the following order the title, name(s) of author(s), address(es), six keyword entries, a suggested running head, contact information for quick communication with the corresponding author (telephone, facsimile, and email if used) and a word count. It is assumed that contact details are publishable, unless the author at submission expressly asks that they are not to be. The second page must bear a Summary $\leq 5\%$ of the paper's word count which, independently of the main text, succinctly expresses the purpose, methods, results and implications of the study. A research paper will normally have such sections as: Introduction, Methods (details of study area, analyses, sources of data), Results, Discussion, Acknowledgements and References. The sections should accordingly be so ordered. A subject review should have sections appropriate to the topic addressed, but any methods and sources should preferably be detailed in a separate section.

Text styles

A recent issue of the journal from Volume 23 onwards should be consulted for style. Units, symbols and related matters are based on the CBE Manual *Scientific Style and Format* (6th Edition, 1994, ISBN 0 521 47154 0). Uncommon currencies should at first mention have a US\$ exchange rate (e.g. '£1 \approx US\$1.55, December 1995'). Authors presenting equations are advised to use software available for the purpose. Common names of organisms should at first mention be accompanied by their full scientific names based on authoritative texts. Scientific names of genera, species and subspecies, but not of higher groups, words foreign to the English language and others suitable for italicization should be underlined, even if typed

in actual italics. Points listed for emphasis should be given as 'bullet' points (as exemplified above), unless specific numbering or lettering is essential. Footnotes will not normally be used.

References

A recent issue of *Environmental Conservation* from Volume 23 onwards will give examples of most items of stylization. All References must be cited in the text, with three or more authors being represented as '*et al.*'. Where a Reference is not to a recognized periodical or substantive book, but rather to, e.g., an official document, internal technical or consultancy report, greater flexibility may be exercised. Submitted and otherwise unpublished papers should be mentioned in the text only (e.g. 'Harrison & Polunin, unpublished data 1996', or 'Harrison, personal communication 1996'). The chief criterion for correct referencing is that a reader be provided with the information necessary to find the item cited. References which are not strictly necessary for an argument should be omitted.

Figures and Tables

There should be no duplication of data amongst text, Figures and Tables. All Figures and Tables must be referred to in the text using Arabic numerals in order of use. Figures must be identified on the back with the first author's name and Figure number. Figures must be succinct but clear, necessary and ready for reproduction; photographs must be especially so. Maps must bear scales and photographs should include some indication of scale. Colour illustrations are acceptable if they significantly enhance the text, but authors will be charged for their publication. Figure legends ('captions') should be listed separately from the Figures, while Tables should be presented one per page complete with headings. Figure legends and Table headings should be comprehensive and incorporate any statistical, scale, key, symbol and other reference details necessary for understanding the information involved (see CBE Manual cited above).

Resubmission of revised typescripts

Authors can expect normally to have their paper returned to them, with comments of both referees and the Editor. Resubmitted typescripts should be in duplicate with one set of originals of any new or revised illustrations. These should be accompanied by a letter detailing how substantive points raised have now been addressed and by IBM-compatible file(s) on a diskette labelled with details of machine, operating system and word-processing software used. Acceptance of a paper for publication in *Environmental Conservation* will normally be confirmed when any outstanding points have been clarified with the Editor, and a copyright transfer form will then be issued for the author(s) to sign.

Proofs and offprints

Corresponding authors of subject reviews and research papers will receive 25 free offprints (5 for comments). Proofs and offprint order forms will be sent to corresponding authors of subject reviews, research papers and guest editorials/comments. Only typographical errors should normally be corrected at proof stage. Any substantial alterations of content for other reasons must be referred to the Editor.

Dr N.V.C. Polunin, Editor, & Dr Gillian Wilson, Editorial Assistant, *Environmental Conservation*, Department of Marine Sciences & Coastal Management, University of Newcastle, Newcastle upon Tyne NE1 7RU, UK.

ENVIRONMENTAL CONSERVATION

An International Journal of Environmental Science

VOLUME 23 No. 3 SEPTEMBER 1996

CONTENTS

EDITORIAL

International environmental governance in the early twenty-first century: glancing into the crystal ball. By *Nico J. Schrijver* 191

FOUNDATION NOTICES

Confidential Awards Committee 'Best Paper' Prizes for 1995. By *Nicholas Polunin Sr* 193

COMMENT

The Mac Sharry Plan and integration of EU policy on agriculture and nature conservation. By *Kees J. Canters* 195

PAPERS

Nitrogen pollution in the European Union – an economy-environment confrontation. By *Ester van der Voet, René Kleijn, Helias A. Udo de Haes* 198

Protected areas, people and incentives in the search for sustainable forest conservation in Honduras. By *Michael Richards* 207

Core values for sustainable development. By *Arthur H. Westing* 218

Food for all in 2020: can the world be fed without damaging the environment? By *Per Pinstrup-Andersen and Rajul Pandya-Lorch* 226

Long-term environmental change in tropical forests: increasing tree turnover. By *Oliver L. Phillips* 235

Effects of cement-kiln dust pollution on the vegetation and seed-bank species diversity in the eastern desert of Egypt. By *Ahmad K. Hegazy* 249

Property rights in protected areas: obstacles to community involvement as a solution in Thailand. By *Peter Vandergeest* 259

MEETING REPORTS

Fourth International Symposium on Hyphenated Techniques in Chromatography & Hyphenated Chromatographic Analyzers (HTC4) (J.R. Senten); *Centennial of Portuguese Oceanography* (Richard G. Miller); *Meeting of the Task Force on the Environment of the European Federation of Consulting Engineers Associations (EFCA)* (Roger H. Charlier); *US Orthodox Summit on the Environment* (Elizabeth Theokritoff); *CATS III. Characterization and Treatment of Sludge* (Roger H. Charlier); *Montreal Meeting on 'Greenhouse' Gas Impact of Hydroelectric Dams* (Philip M. Fearnside); *Twenty-third Annual Conference on Ecosystems Restoration and Creation* (Frederick Webb); *NGO Forum on Cleaner Industrial Production* (Askit Kayalar); *European Regions for a Safe and Clean Coast – Coastal and Marine Pollution: Solutions and Action* (Kelly Rigg); *8th International Coral Reef Symposium* (Nicholas V.C. Polunin); *NATO Advanced Research Workshop on 'Conflict and the Environment'* (Arthur H. Westing); *Beltsville Symposium XXI on Global Genetic Resources: Access, Ownership and Intellectual Property Rights* (Amy Y. Rossman) 269

BOOK REVIEWS

Actes du Colloque: la Méditerranée, la Mer et les Hommes Ed. by M. Aubert (Roger H. Charlier); *Borneo Log, the Struggle for Sarawak's Forests*, by William W. Bevis (Timothy C. Whitmore); *Activités d'Éducation à l'Environnement Marin – Nouveaux Programmes Scolaires*, by Josette Dejean-Arrecgros (Roger H. Charlier); *The Geography of Survival: Ecology in the Post-Soviet Era*, by Ze'ev Wolfson (alias Boris Komarov) (Marshall I. Goldman); *The Great Book of Hemp: The Complete Guide to the Environmental, Commercial and Medicinal Uses of the World's Most Extraordinary Plant*, by Rowan Robinson (Richard E. Schultes); *How Many People Can the Earth Support?*, by Joel E. Cohen (David Willey); *Assessment and Remediation of Contaminated Sediments Program (ARCS). Estimating Contaminant Losses From Components of Remediation Alternatives for Contaminated Sediments* by US Environmental Protection Agency (EPA) (Roger H. Charlier); *Mission on the Ho Chi Minh Trail: Nature, Myth, and War in Viet Nam*, by Richard L. Stevens (Arthur H. Westing) 278
