

Mental Health Care in China

中國的精神保健制度

State Policies, Professional Services and Family Responsibilities

by Veronica Pearson

This book traces the development of psychiatric services in the People's Republic of China. Historical, policy and legal frameworks are constructed to provide a context in which psychiatric services may be better understood. The experience of both staff and patients in one particular hospital is examined in detail. The book raises questions about the similarities in the experience of psychiatric illness across significantly different cultures.

Gaskell Academic Series

The Analysis of Hysteria

Second Edition

Understanding Conversion and Dissociation

By Harold Merskey

This book is a substantial update and enlargement of the first edition, which received exceptionally good reviews when first published in 1979. It provides a survey of the topics which have been included under the name of hysteria and which are still of importance under the terms conversion and dissociation. Current concepts of repression, including the common modern problems of "multiple personality disorder" and "recovered memory" are discussed in detail. The whole range of hysterical phenomena is covered, from classical paralyses and blindness to questions about hysterical personality and epidemic hysteria. £30.00, 504pp., Hardback, 1995, ISBN 0 902241 88 5
