

Now in paperback

A Guide to Quantum Groups

V. CHARI and A. N. PRESSLEY

A comprehensive view of quantum groups and their applications. The authors build on a self-contained account of the foundations of the subject and go on to treat the more advanced aspects concisely and with detailed references to the literature. Thus this book can serve both as an introduction for the newcomer, and as a guide for the more experienced reader. All who have an interest in the subject will welcome this unique treatment of quantum groups.

£22.95 net PB 0 521 55884 0 672 pp. 1995

Multivalent Functions

Second Edition

W. K. HAYMAN

The second edition of this celebrated book is the first to contain a full and self-contained proof of De Branges' theorem. Every chapter has been updated and many of the original proofs have been simplified. It will be essential for all interested in complex function theory.

£35.00 net HB 0 521 46026 3 275 pp. 1994

Cambridge Tracts in Mathematics 110

Skew Fields

Theory of General Division Rings

P. M. COHN

Based on the author's LMS lecture note volume *Skew Field Constructions*, the present work offers a comprehensive account of skew fields. Numerous exercises test the reader's understanding, presenting further aspects and open problems in a concise form. The notes and comments at the end of each chapter provide an historical background.

Encyclopedia of Mathematics and its Applications 57

Introduction to Analytic and Probabilistic Number Theory

G. TENENBAUM

Translated by C. B. Thomas

A self-contained introduction to analytic methods in number theory. It offers to students and beginning researchers a systematic and consistent account of the subject but will also be a convenient resource and reference for more experienced mathematicians.

£45.00 net HB 0 521 41261 7 464 pp. 1995

Cambridge Studies in Advanced Mathematics 46

Clifford Algebras and the Classical Groups

I. PORTEOUS

Here, Ian Porteous has reworked his previous book on this subject, *Topological Geometry*, and has expanded and added material to bring the theory of Clifford algebras to the fore. This treatment of the theory of Clifford algebras will be welcomed for its clarity and detail.

£30.00 net HB 0 521 55177 3 304 pp. 1995

Mathematical Structures in Computer Science

Editor-in-Chief

G. Longo, *Laboratoire d'Informatique (CNRS) et DMI, Ecole Normale Supérieure, 45 rue d'Ulm, 75005, Paris*
(email: longo@dm.ens.fr)

Associate Editors

P. L. Curien, *LIENS, 45 rue d'Ulm, 75230 Paris* (email: curien@dm.ens.fr)
A. M. Pitts, *Computer Laboratory, University of Cambridge, Pembroke St, Cambridge CB2 3QG*

Mathematical Structures in Computer Science (MSCS) is a new journal of excellence in theoretical computer science which focuses on the application of ideas from the structural side of mathematics and mathematical logic to computer science. The journal bridges the gap between theoretical contributions and software design, publishing original papers or broad surveys with original perspectives in all areas of computing, provided that ideas or results from algebra, geometry or category theory form a basis for the work.

MSCS is distinct from existing titles in that it specialises in the art of applying mathematics of genuine interest and general applicability to computer science; its objective is to promote the useful application of high level mathematics to language design and software implementation. The journal increases the circulation of new results in this fast growing area.

Essential reading for:

- Mathematicians with interests in computer science
- Theoretical computer scientists
- Computer scientists working in language development or formal methods

Instructions for Authors

Editorial policy The journal welcomes submissions in any of the areas of Combinatorics, Probability, or Computer Science, not just those dealing explicitly with relations between the three. Its scope covers combinatorics in a broad sense, including classical and algebraic graph theory, probabilistic methods, random structures, combinatorial probability and limit theorems for random combinatorial structures; and the theory of algorithms, including complexity theory, randomised algorithms, probabilistic analysis of algorithms, computational learning theory and optimisation.

Submission of manuscripts Papers may be submitted to any member of the Editorial Board. Three copies should be sent accompanied by the author's address, telephone and fax number, and if possible, an electronic mailing address.

Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Upon acceptance of a paper, the author will be asked to transfer copyright to the publisher.

Authors are encouraged to submit papers electronically by sending a LaTeX file to cpc@dpmms.cam.ac.uk; this file should include the figures (line figures only) and all author-defined macros. Authors using LaTeX should use the CPC LaTeX style file which can be obtained using anonymous FTP from the internet address <ftp.cup.cam.ac.uk>. Go into the directory `/pub/texarchive/journals/latex/cpc` where you will find a concatenated file called *cpc.all*. The file *cpc.all* contains *readme.txt*, *cpc.sty* and *cpcguide.tex*. If you Tex *cpcguide.tex* you will get a full set of instructions for using the style file. In case of difficulties obtaining these files, there is a help-line available via e-mail; please contact texline@cup.cam.ac.uk. While use of CPC LateX style file is preferred, ordinary LaTeX or plain Tex files can also be accepted.

On final acceptance of a paper, authors should send the LaTeX source code on disc to the editorial office, together with a hard copy produced using the same file. Discs should be in Apple Mac or PC format and will not be returned. The publisher reserves the right to typeset any article by conventional means if the author's TeX code presents problems in production.

Layout of conventional manuscripts Papers should be typewritten in **double spacing throughout**, on one side of the paper. Please avoid footnotes if possible. Papers should begin with an abstract of not more than 300 words and should end with a brief concluding section.

Illustrations Figures should be drawn in indian ink on good quality white paper or produced by computer to comparable quality. Wherever possible they will be reproduced with the author's original lettering. Originals of figures should not be sent until the paper has been accepted. A list of captions should be attached separately.

References References should be listed in alphabetical order at the end of the main text. Please include the article title in the reference, which should be in the order: author's surname, initials; year in parentheses; article title; journal name abbreviated in accordance with the *World List of Scientific Periodicals* (4th edn); volume number; inclusive page numbers. For books and conference proceedings, place of publication and publisher (and Editor(s) if appropriate) should be included. In the text, references should be cited as [1].

Proof reading Typographical or factual errors only may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors. No page charge is made.

Offprints 50 offprints of each article will be supplied free to each first named author. Extra offprints may be purchased from the publisher if ordered at proof stage.
