Environmental Practice is an Englishlanguage journal published quarterly by the National Association of Environmental Professionals. It serves an international audience of environmental professionals in practice and research. *Environmental Practice* is peer-reviewed and accepts original manuscripts that have not previously been published in whole or in part in a peerreviewed journal or in a widely available book. The general philosophy of the journal is outlined in the Mission Statement, which is reproduced in full at the end of the Table of Contents in each issue.

Priority for publication is given to manuscripts that offer clear, insightful views on an environmental problem from an interdisciplinary perspective. *Environmental Practice* seeks especially to publish studies that link data and findings in science and technology with issues of public policy, health, environmental quality, law, political economy, management, and the appropriate standards for expertise. Because the readership of *Environmental Practice* is very broadly based, manuscripts should not be burdened by extensive, unexplained, technical language familiar only to a small group of specialists.

Manuscripts are accepted throughout the year. News items should be submitted by the first day of the month, three months prior to publication. For example, news items to appear in December should be submitted by 1 September.

Kinds of Manuscripts Sought

Environmental Practice publishes several categories of manuscripts as described below. Three of these categories, Research Articles, Environmental Reviews, and Commentaries, are peer-reviewed.

Research Articles: manuscripts that report the results of systematic study on an environmental problem. Typically, research articles will (a) report the results of a formal research exercise or (b) summarize sys-

tematic analysis of one or more case studies of particular interest. Environmental professionals in academic or research laboratory settings may be more likely to submit formal research reports. Professionals in consulting practice, agencies, or other organizations may be more likely to submit manuscripts based on case studies. Under most circumstances, Research Articles will not be over 5000 words of text. Most will be substantially shorter. Tables, figures, and reference lists need not be included in the word count. All Research Articles are peerreviewed.

Environmental Reviews: manuscripts that organize and summarize a research literature or case study literature that is otherwise scattered and not easily accessible. Environmental Reviews will generally not be over 6000 words of text. Tables, figures, and reference lists need not be included in the word count. Most will be solicited, but contributions are welcome after consultation with the editor. All Environmental Reviews are peer-reviewed.

Commentaries: manuscripts that discuss a particular subject or problem. Typically, these manuscripts will identify the subject and discuss it in terms of (a) recent research of importance, (b) the implications of research for practice, (c) the interactions among research, policy, and practice, or (d) the social, cultural, economic, legal, or ethical context of the subject. Under most circumstances, Commentaries will not be over 2500 words. Tables, figures, and reference lists need not be included in the word count. All Commentary manuscripts are peer-reviewed.

Book Reviews: manuscripts that portray the content, quality, and significance of books of wide interest to environmental professionals and their practices. Book Reviews should not exceed 650 words, but with the approval of the editor may reach 1300 words.

News Articles: manuscripts that report on (a) an environmental situation or events of broad interest to environmental professionals, or (b) events and activities of the National Association of Environmental Professionals and its Chapters, Committees, and Working Groups. News Articles will generally range from 50 to 2000 words, depending on the subject. Tables, figures, and reference lists need not be included in the word count. Only in rare circumstances will News Articles be subjected to peerreview.

Points-of-View: statements of opinion intended to provoke discussion and debate on particular issues. These manuscripts will generally range from 200 to 650 words. Such manuscripts will not be subject to peer-review, because they are personal opinion. However, the editor may seek advice on matters of tone and fairness.

Letters to the Editor: responses to Research Articles, Environmental Reviews, Commentaries, Book Reviews, News Articles, Points-of-View, and Editorials. These manuscripts will generally range from 50 to 500 words. Letters to the Editor will not be peer-reviewed, but they may be used to solicit responses from others for simultaneous publication.

The editors welcome inquiries about manuscript ideas. You may also contact the editors to request exceptions to the word count limits given above. The Editor-in-Chief, Dr. John H. Perkins, can be reached at 360-866-6000, ext. 6503 or <perkinsj@ elwha.evergreen.edu>. You can reach the Managing Editor, Dr. Catherine A. French, at 360-866-6000, ext. 5955 or <frenchca@ evergreen.edu>.

Manuscript Preparation and Submission

1. Membership in the National Association of Environmental Professionals is not a requirement for acceptance of a manuscript for publication in *Environmental Practice*.

2. Send the original and four clear copies of Research Articles, Environmental Reviews,

and Commentaries. Send the original and two clear copies of Book Reviews, News Articles, Points-of-View, and Letters to the Editor. Please indicate the kind of manuscript intended. [Note: Figures based on original artwork should be submitted for review as good copies; the author should retain the originals until the manuscript is accepted.]

3. Manuscripts should be sent to the editorial office:

Dr. Catherine A. French, Managing Editor Environmental Practice Mailstop SEM 3127 The Evergreen State College 2700 Evergreen Parkway NW Olympia, Washington 98505 USA

- 4. Traditions in style and documentation differ considerably among the different disciplines published in *Environmental Practice*. Accordingly, the journal will accept manuscripts reflecting a wide variety of these established traditions. Nevertheless, authors should use the following conventions in the different parts of their manuscripts, and the manuscripts should be ordered in the following way:
- a. Cover sheet: Attach a cover sheet including author name(s); title or position; institutional affiliation; corresponding author address, telephone number, Fax number, and E-mail address, and study sponsors, if any. Both the cover sheet and first page should include the manuscript's title. All pages should be numbered, with the cover sheet as page 1. To facilitate blind peer reviews, author names and affiliations should appear only on the cover sheet.
- b. Acknowledgments-Abbreviations-Key words: Place on a separate sheet, located after the cover sheet. This journal resists the use of acronyms and other forms of abbreviation. As a general rule, an acronym is appropriate only (a) if it is used frequently in a portion or all of a manuscript or (b) if the acronym itself has entered common usage in everyday conversation (e.g., "EPA" for the "United States Environmental Protection Agency"). The use of more than two different acronyms in one manuscript is unlikely to be acceptable. If abbreviations or acronyms are used, they should be explicitly

listed and defined on a separate sheet. For indexing purposes, provide up to eight key words or phrases.

c. Abstract: Manuscripts of Research Articles, Environmental Reviews, and Commentaries should be accompanied by an abstract of no more than 200 words. Abstracts should be a standalone summary of the manuscript's central findings and argument, not an overview of the manuscript's outline.

d. Text

1. Organization: Research Articles and Environmental Reviews prepared by authors schooled in the natural and social sciences will typically have separate sections for Introduction, Methods, Results, Discussion, and Conclusions. Authors schooled in the legal and humanistic disciplines are likely to organize their materials in a way that illuminates the logical connections between different elements of the argument. In all cases, use appropriate section headings to help guide the reader.

2. Physical features: Manuscripts, including references, tables, legends, and quotations, should be typed, double spaced, on one side of white paper with margins of at least one inch on all sides, and without right-hand justification. Figures should be clear prints of electronic versions or good copies of original artwork. All manuscripts should be sent to the Editorial Office (address above). In all cases, authors should retain a copy of the complete manuscript for their files.

e. Documentation and references: This journal recognizes that authors trained in different disciplines frequently use different methods for providing documentation. Therefore, the first guideline is that authors should use a standard system for their discipline. Whatever system is used should allow all readers (even people trained in different disciplines) to have easy access to an author's references. The style used should also be consistent throughout the manuscript. Authors may use either one of the two systems listed below.

1. Author-date. This system is widely used in the natural and social sciences. References are cited in text like so: "Smith (1990) showed" or "as seen elsewhere (Smith, 1990)." References cited in text are listed alphabetically in a References section at the end of the manuscript. The following examples illustrate an appropriate style for most kinds of documents listed in the References section:

Article in journal

Author, A.B., and C.D. Author. 1997. Title of Article. *Name of Journal* Volume(Issue):starting page number-ending page number.

Article or chapter in book

Author, A.B., C.D. Author, and E.F. Author. 1998. Title of Article or Chapter. In *Title of Book*, G.H. Editor and I.J. Editor, eds., 4th edition. Publisher, Place of Publication, starting page number-ending page number.

Book

Author, A.B., and C.D. Author. 1994. *Title of Book*. Publisher, Place of Publication, total pages in book.

Edited book

Editor, A.B., and C.D. Editor, eds. 1996. *Title of Book*. Publisher, Place of Publication, total pages in book.

Dissertation or thesis

Author, A.B. 1998. *Title*, (Ph.D. Dissertation) OR (Master's Thesis). University, City, State, total pages in document.

Reports by author

Author, A.B. 1993. *Title of report*. Report Number, Agency, City, State, total pages in report.

Reports by agency

Name of agency. 1995. *Title of report*. Report Number, City, State, total pages in report.

Personal communication (e.g., letter,

telephone, e-mail, interview) Person, A.B. 1999. Personal communication, Day-Month. Person's title or position, Person's agency or organization, City, State.

Web sites

Name of Site/Subsection of Site. Year of access to site. *Title of subsection*. URL address of site. Day-Month of access to site. 2. Endnotes. Endnotes consist of a superscript number in the text and a corresponding, numbered list of citations placed at the end of the text. This method of documentation is frequently used in historical, legal, or humanistic writing, and it is useful for citations that must contain more than one reference. Endnotes with more than one reference should be separated by semi-colons. Avoid, if possible, use of endnotes simply to further explain the text rather than to provide documentation. Subsequent references to a source should give the last name of the author(s), shortened title, and relevant page(s). Do not use op. cit., ibid, idem, infra, or supra. See The Chicago Manual of Style for details not addressed here. The following examples illustrate proper style for endnotes:

Article in journal

A.B. Author and C.D. Author, 1997, "Title of Article," *Name of Journal* Volume(Issue):starting page number-ending page number.

Article or chapter in book

A.B. Author, C.D. Author, and E.F. Author, 1998, "Title of Article or Chapter," in *Title of Book*, G.H. Editor and I.J. Editor, eds., 4th edition, Publisher, Place of Publication, starting page number-ending page number.

Book

A.B. Author and C.D. Author, 1994, *Title of Book*, Publisher, Place of Publication, total pages in book.

Edited book

A.B. Editor and C.D. Editor, eds., 1996, *Title of Book*, Publisher, Place of Publication, to-tal pages in book.

5. Authors are encouraged to illustrate their work with tables, figures, and photographs. Authors of accepted manuscripts must provide original illustrations on disk or in camera-ready form. Color photographs will be included only if they are essential for the integrity of the manuscript; all costs of color photos must be paid by the author(s). Tables should not duplicate data also provided in figures or in the text. For tables of data that might be of value only to a few readers, authors should consider indicating that the data is available on request from the author. Table and Figure legends should make them understandable without reference to the text. Tables and Figures must be referred to in the text. The manuscript text should indicate the desired location of each Table and Figure.

6. Use the International System of Units (SI) or metric units. If necessary for clarity or common usage, other units may be included in parentheses immediately following the acceptable units.

7. Environmental Practice uses a doubleblind peer-review process. The reviewer will not know the identity or location of the author(s), and the author(s) will receive reviewer's comments without the reviewer's identity or location. Authors are invited to submit names of appropriate reviewers, but the final choice of reviewers lies with the editor. Authors will be notified of the disposition of their manuscript as soon as possible. The goal of this journal is to have a decision to the author(s) within 6-8 weeks of receipt of manuscript.

8. Upon acceptance of manuscripts, authors will be requested to send the editorial office a disk (electronic) version of the manuscript as well as two revised paper copies. The preferred word processing programs are WordPerfect or Word. The preferred disk is a 3.5-inch disk formatted for DOS or Windows. Please contact the editorial office for exceptions: an author's access to computing equipment will not be a factor in the publication of a manuscript.

9. The final version of the manuscript (both disk and paper copies) should include a short biographical sketch of each author.

10. All authors must sign the "Transfer of Copyright" agreement before the manuscript can be published. (U.S. government officers or employees whose submitted work was prepared as part of their employment are exempt from the transfer requirement, but they must certify their status.) This transfer agreement enables the National Association of Environmental Professionals to protect the copyrighted material for the authors, but authors do not thereby relinquish proprietary rights or rights to use their work in the future. The copyright transfer covers the exclusive rights to reproduce and distribute the manuscript, including reprints, photographic reproduction, microfilm, electronic versions, and all other reproduction methods, plus translations into languages other than English.

11. The corresponding author will receive page proofs for final proofreading shortly before the article is scheduled for publication. Authors bear full responsibility for accuracy and completeness of their material. Any corrections (not revisions) should be made at this time, and the page proofs must be returned to the publisher within 72 hours of receipt. Extensive revisions are strongly discouraged at this stage of the publication process and, if permitted by the editor and publisher, are likely to result in special charges to the author.

12. It is a condition of publication that manuscripts submitted to this journal have not been published previously, in part or in whole, in a peer-reviewed journal. All prior presentations of the manuscript material must be disclosed to the editor at the time of initial manuscript submission. It is also a condition of publication that the author(s) will not simultaneously submit or publish the material elsewhere.

13. Authors will be sent a reprint order form when they are sent page proofs. If reprints are desired, the completed form along with payment must be returned to the publisher at the same time page proofs are returned.

14. This journal features a full-color illustration on the cover of each issue, the cost of which is borne by the journal. The cover is available to any contributor whose manuscript is accepted for publication, provided the photographic material is original, not previously published, and of high quality. For each submission, two 35mm slides or two 5 x 7 in (13 x 18 cm) or larger prints should be sent to the editorial office after the manuscript has been accepted for publication. The top of the image should be indicated and the submission should include a brief caption and credit on the back of the photo. Note that the submission, whether in slide or print form, should be in sharp focus.

National Association of Environmental Professionals

Code of Ethics and Standards of Practice For Environmental Professionals

The objectives of Environmental Professionals are to conduct their personal and professional lives and activities in an ethical manner. Honesty, justice and courtesy form moral philosophy which, associated with a mutual interest among people, constitute the foundation of ethics. Environmental Professionals should recognize such a standard, not in passive observance, but as a set of dynamic principles guiding their conduct and way of life. It is their duty to practice their profession according to this Code of Ethics.

As the keystone of professional conduct is integrity, Environmental Professionals will discharge their duties with fidelity to the public, their employers, clients, and with fairness and impartiality to all. It is their duty to interest themselves in public welfare, and to be ready to apply their special knowledge for the benefit of mankind and their environment.

Creed

The objectives of an Environmental Professional are:

- 1. to recognize and attempt to reconcile societal and individual human needs with responsibility for physical, natural, and cultural systems.
- 2. to promote and develop policies, plans, activities, and projects that achieve complementary and mutual support between natural and man-made, and present and future components of the physical, natural and cultural environment.

Ethics

- As an Environmental Professional I will:
- be personally responsible for the validity of all data collected, analyses performed, or plans developed by me or under my direction. I will be responsible and ethical in my professional activities.
- 2. encourage research, planning, design, management and review of activities in a scientifically and technically objective manner. I will incorporate the best principles of the environmental sciences for the mitigation of environmental harm and enhancement of environmental quality.
- 3. not condone misrepresentation of work I have performed or that was performed under my direction.
- 4. examine all of my relationships or actions which could be legitimately interpreted as a conflict of interest by clients, officials, the public or peers. In any instance where I have a financial or personal interest in the activities with which they are directly or indirectly involved, I will make a full disclosure of that interest to my employer, client, or other affected parties.
- 5. not engage in conduct involving dishonesty, fraud, deceit, or misrepresentation or discrimination.

6. not accept fees wholly or partially contingent on the client's desired result where that desired result conflicts with my professional judgement.

Guidance for Practice as an Environmental Professional

As an Environmental Professional I will:

- 1. encourage environmental planning to begin in the earliest stages of project conceptualization.
- 2. recognize that total environmental management involves the consideration of all environmental factors including: technical, economic, ecological, and sociopolitical and their relationships.
- 3. incorporate the best principle of design and environmental planning when recommending measures to reduce environmental harm and enhance environmental quality.
- 4. conduct my analysis, planning, design and review my activities primarily in subject areas for which I am qualified, and shall encourage and recognize the participation of other professionals in subject areas where I am less experienced. I shall utilize and participate in interdisciplinary teams wherever practical to determine impacts, define and evaluate all reasonable alternatives to proposed actions, and assess short-term versus long-term productivity with and without the project or action.
- 5. seek common, adequate, and sound technical grounds for communication with and respect for the contributions of other professionals in developing and reviewing policies, plans, activities, and projects.
- 6. determine that the policies, plans, activities or projects in which I am involved are consistent with all governing laws, ordinances, guidelines, plans, and policies, to the best of my knowledge and ability.
- 7. encourage public participation at the earliest feasible time in an open and productive atmosphere.
- 8. conduct my professional activities in a manner that ensures consideration of technically and economically feasible alternatives.

Encourage Development of the Profession

As an Environmental Profession I will:

- 1. assist in maintaining the integrity and competence of my profession.
- 2. encourage education and research, and the development of useful technical information relating to the environmental field.
- 3. be prohibited from lobbying in the name of the National Association of Environmental Professionals.
- 4. advertise and present my services in a manner that avoids the use of material and methods that may bring discredit to the profession.

BIOLOGY OF BATS

Gerhard Neuweiler, University of Munich, Germany

Translated by Ellen Covey, University of Washington

Well adapted to numerous habitats, bats comprise almost one quarter of all species of mammals. In this introduction, Gerhard Neuweiler surveys the most current information available on the physiology, ecology, and phylogeny of bats. And the book features a detailed discussion of echolocation and describes numerous species from around the world. June 1999 200 - 2013 304 pp.; 127 Tinecuts

THE OSTRICH FACTOR **Our Population Myopia**

Garrett Hardin, Professor Emeritus at University of California, Santa Barbara "No one feeds the intellectual fires of ecology's role in government better than Hardin. Rich in history, ethics, etymology, Hardin specializes in breaking the manacles of history, phrase and thought that seem to condemn us to the cheapening of people and the impoverishment of habitat through growth in human numbers. Hardin offers an exciting glimpse of ourselves at the moment and shows us all that history need not flow inevitably to chaos." -G.M. Woodwell, Director, Woods Hole Research

BUTTERFLIES THROUGH BINOCULARS 🔩 🖉 A Field Guide to the Butterflies of Eastern North America

Jeffrey Glassberg, President of the North American Butterfly Association and Past President of Xerces Society

This magnificent field guide is the latest addition to the exciting series that is revolutionizing the way we look at butterflies. Greatly expanding on Butterflies Through Binoculars: The Boston-New York-Washington Region-identified by Defenders of Wildlife Magazine as "the first to focus on net-less butterflying" and called "a clear winner" by the Audubon Naturalist-Glassberg here shows us how to find, identify, and enjoy all of the butterflies native to the eastern half of the United States and southeastern Canada.

TROPICAL FOREST ECOLOGY A View from Barro Colorado Island 💠

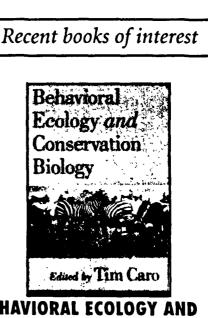

Egbert Giles Leigh, Jr. (Smithsonian Tropical Research Institute This book considers three essential questions for understanding the ecological organization of tropical forests. How do they stay green with their abundance of herbivores? Why do they have such a diversity of plants and animals? And what role does mutualism play in the ecology of tropical forests? Beautifully written and abundantly illustrated, this book will appeal to a wide variety of scientists.

Journal of Environmental Law

www.oup.co.uk/envlaw

For over a decade the *Journal of Environmental Law* has encouraged innovative and sustained appraisals of current and emerging concepts, policies, and practice. It has tackled the range of subjects encompassed within environmental law from the more traditional fields of pollution control, waste management, and habitat protection, to the challenging new areas of biotechnology, regulation of hazardous substances, and international regimes for common natural resource.

To make this valuable resource even more useful, the *Journal of Environmental Law* is now fully online. All subscribers have free access to the online edition of the 1999 volume. If you are a personal subscriber, go to WWW.OUP.CO.UK/ENVLAW and register for online access. Readers using library copies should ensure that the librarian has registered their instition. View the web page for more instructions.

EVER REENSTATE COLLEGE

OLYMPIA, WASHINGTON

President

The Evergreen State College seeks nominations and applications for the position of president to succeed Dr. Jane L. Jervis, who is retiring after eight years of achievement in leading the college through growth and change. The successful candidate could assume the presidency as early as June 2000.

College Profile – Evergreen is a progressive public college of liberal arts and sciences that has established a national reputation for leadership in developing innovative, interdisciplinary, collaborative, and team-taught academic programs. Evergreen places teaching and learning first and is committed to creating an environment in which theory and practice are linked through internships, community-based projects and other activities. It strives to be a community in which diverse students, faculty, and staff develop policy and make decisions collaboratively.

The 28-year-old college is state-funded with an annual operating budget of \$58 million. The main campus is in Olympia, the state capital, between Seattle and Portland at the southern tip of Puget Sound. Enrollment is approximately 3,700 FTE, including more than 200 in three graduate programs. The college has a stateapproved plan to grow to just under 5,000 FTE by 2010. Evergreen offers an expanding part-time studies program, upper-division programs at the Evergreen-Tacoma campus, and tribal community-based programs throughout the Olympic Peninsula. It also houses six public service centers.

Committed to equal opportunity, Evergreen is working to build a diverse staff, faculty, and student body. For more information about Evergreen, please refer to our web site at www.evergreen.edu.

Who Should Apply – We encourage applications from qualified people who have demonstrated the following: Ability to lead with consistency, honesty, and accountability; commitment to innovation in higher education; a distinguished record of scholarly, artistic, or professional achievement; commitment to equal opportunity and access in higher education; ability to work within and promote a multicultural and multi-ethnic community and curriculum; and a successful record in managing programs, budgets and finances. A doctorate is strongly preferred.

Application Procedure – Address nominations, inquiries, and requests for application packets to:

Presidential Search Committee The Evergreen State College Library 3103 Olympia, WA 98505

Telephone: (360) 866-6000, ext. 6113 E-mail: husseman@evergreen.edu

Review of applicant files will begin in mid-October; finalist interviews are tentatively scheduled for late January. Confidentiality will be strictly maintained until the final stages of the process.

If you're not already subscribing to **Environmental Practice**, here's what you're missing...

Environmental Practice provides synergy between environmental academics and other professionals. The journal incorporates news from the National Association of Environmental Professionals (NAEP), original research articles, and other articles of interest to government agencies, corporations, private consultants, environmental institutions, and others. Environmental Practice reports on historic and contemporary environmental issues.

NAEP was founded in 1975 and is the multidisciplinary association dedicated to the advancement of the environmental professions in the US and abroad. It is a forum for state-ofthe-art information on environmental planning, research, and management, and it is a network of professional contacts among colleagues in industry, government, academe, and the private sector. Environmental Practice is the journal for following and understanding changes in the industry.
