Ergod. Th. & Dynam. Sys. (2010), **30**, 317–320 © *Cambridge University Press, 2010*

Papers to appear in forthcoming issues

Adler, R. L., Nowicki, T., Świrszcz, G. and Tresser, C.	Convex dynamics with constant input
Akin, E., Glasner, E., Huang, W., Shao, S. and Ye, X.	Sufficient conditions under which a transitive system is chaotic
Aliste Prieto, J.	Translation numbers for a class of maps on the dynamical systems arising from quasicrystals in the real line
Arthur Robinson, E. and Şahin, A. A.	Rank-one $\mathbb{Z}^d$ actions and directional entropy
Ashwin, P. and Goetz, A.	Cone exchange transformations and boundedness of orbits
Austin, T.	On the norm convergence of non-conventional ergodic averages
Badea, C., Grivaux, S. and Müller, V.	Epsilon-hypercyclic operators
Bakhtin, V. I.	On t-entropy and variational principle for the spectral radius of weighted shift operators
Barbot, T. and Maquera, C.	Transitivity of codimension one Anosov actions of $\mathbb{R}^k$ on closed manifolds
Barge, M., Diamond, B., Hunton, J. and Sadun, L.	Cohomology of substitution tiling spaces
Bautista, S. and Morales, C.	A sectional-Anosov connecting lemma
Begun, B. and del Junco, A.	Partitions with independent iterates in random dynamical systems
Bezuglyi, S., Kwiatkowski, J., Medynets, K. and Solomyak, B.	Invariant measures on stationary Bratteli diagrams
Bowen, L.	Non-abelian free group actions: Markov processes, the Abramov–Rohlin formula and Yuzvinskii's formula
Bressaud, X., Durand, F. and Maass, A.	On the eigenvalues of finite rank Bratteli–Vershik dynamical systems
Bressaud, X., Hubert, P. and Maass, A.	Persistence of wandering intervals in self-similar affine interval exchange transformations
Bruin, H., Demers, M. and Melbourne, I.	Existence and convergence properties of physical measures for certain dynamical systems with holes
Calegari, D. and Fujiwara, K.	Combable functions, quasimorphisms, and the central limit theorem
Calta, K. and Wortman, K.	On unipotent flows in $\mathcal{H}(1, 1)$
Comman, H. and Rivera-Letelier, J.	Large deviation principles for non-uniformly hyperbolic rational maps
Cornea, O., de Rezende, K. A. and da Silveira, M. R.	Spectral sequences in Conley's theory

https://doi.org/10.1017/S0143385709001199 Published online by Cambridge University Press

de la Llave, R. and Windsor, A.	Livšic theorems for non-commutative groups including diffeomorphism groups and results on the existence of conformal structures for Anosov systems
Demers, M. F.	Functional norms for Young towers
Ding, F., Pan, J., Wang, S. and Yao, J.	Only rational homology spheres admit $\Omega(f)$ to be union of DE attractors
Durieu, O. and Volný, D.	On sums of indicator functions in dynamical systems
Elekes, M., Keleti, T. and Máthé, A.	Self-similar and self-affine sets; measure of the intersection of two copies
Eroğlu, K. I., Rohde, S. and Solomyak, B.	Quasisymmetric conjugacy between quadratic dynamics and iterated function systems
Falconer, K. and Samuel, T.	Dixmier traces and coarse multifractal analysis
Fletcher, A. N. and Nicks, D. A.	Quasiregular dynamics on the n-sphere
Frantzikinakis, N., Johnson, M., Lesigne, E. and Wierdl, M.	Powers of sequences and convergence of ergodic averages
Froyland, G., Lloyd, S. and Quas, A.	Coherent structures and isolated spectrum for Perron–Frobenius cocycles
Fujino, M.	C^*-algebras arising from substitutions
Galatolo, S. and Pacifico, M. J.	Lorenz like flows: exponential decay of correlations for the Poincaré map, logarithm law, quantitative recurrence
Gavish, M.	Measures with uniform scaling scenery
Gentile, G.	Quasi-periodic motions in strongly dissipative forced systems
Glasner, E., Lemańczyk, M. and Weiss, B.	A topological lens for a measure-preserving system
Gogolev, A.	On diffeomorphisms Hölder conjugate to Anosov ones
Guilloux, A.	A brief remark on orbits of SL(2, $\mathbb{Z}$) in the euclidean plane
Gupta, C.	Extreme value distributions for some classes of non-uniformly partially hyperbolic dynamical systems
Gutman, Y.	Embedding $\mathbb{Z}^k$-actions in cubical shifts and $\mathbb{Z}^k$-symbolic extensions
Harvey, N. and Peres, Y.	An invariant of finitary codes with finite expected square root coding length
Hayashi, S.	An extension of the ergodic closing lemma
Hochman, M.	Non-expansive directions for $\mathbb{Z}^2$ actions
Hochman, M.	On the automorphism groups of multidimensional shifts of finite type
Host, B. and Kra, B.	Nil–Bohr sets of integers
Jenkinson, O. and Steel, J.	Majorization of invariant measures for orientation-reversing maps
Ji, L. and Weber, A.	Dynamics of the heat semigroup on symmetric spaces
Jiang, Y. and Ye, Y.-L.	Ruelle operator theorem for non-expansive systems
Jordan, T. and Rams, M.	Multifractal analysis of weak Gibbs measures for non-uniformly expanding C^1 maps
Julien, A.	Complexity and cohomology for cut-and-projection tilings

https://doi.org/10.1017/S0143385709001199 Published online by Cambridge University Press

Kamae, T.	Mixing properties of numeration systems coming from weighted substitutions
Kennedy, J., Raines, B. E. and Stockman, D. R.	Basins of measures on inverse limit spaces for the induced homeomorphism
Kittrell, J. and Tsankov, T.	Topological properties of full groups
Kočan, Z., Kornecká-Kurková, V. and Málek, M.	Entropy, horseshoes and homoclinic trajectories on trees, graphs and dendrites
Koch, H. and Kocić, S.	A renormalization group approach to quasiperiodic motion with Brjuno frequencies
Kwiatkowska, A. and Solecki, S.	Spatial models of Boolean actions and groups of isometries
Larsen, N. S.	Crossed products by abelian semigroups via transfer operators
Leibman, A.	Multiple polynomial correlation sequences and nilsequences
Leplaideur, R., Oliveira, K. and Rios, I.	Equilibrium states for partially hyperbolic horseshoes
Leplaideur, R.	Thermodynamic formalism for a family of non-uniformly hyperbolic horseshoes and the unstable Jacobian
Levin, G.	Multipliers of periodic orbits in spaces of rational maps
Levin, G. and Świątek, G.	Measure of the Julia set of the Feigenbaum map with infinite criticality
Li, S. and Shen, W.	An improved real C^k Koebe principle
Liu, C.	Strong bounded operators for ergodic averages and Lebesgue derivatives
Llibre, J. and Valls, C.	Analytic integrability of quadratic–linear polynomial differential systems
Lohrmann, P.	Normalisation holomorphe de structures de Poisson
Los, J.	Infinite sequence of fixed point free pseudo-Anosov homeomorphisms
Łuczak, A.	The eigenvectors of semigroups of positive maps on von Neumann algebras
Markarian, R., Pujals, E. and Sambarino, M.	Pinball billiards with dominated splitting
Matsumoto, K.	A class of simple C^*-algebras arising from certain nonsofic subshifts
Miles, R.	Finitely represented closed-orbit subdynamics for commuting automorphisms
Nayak, T. and Prasad, M. G. P.	Iteration of certain meromorphic functions with unbounded singular values
Neishtadt, A. and Treschev, D.	Polymorphisms and adiabatic chaos
Nogueira, A.	Lattice orbit distribution on $\mathbb{R}^2$
Olivier, E.	Uniqueness of the measure with full dimension on sofic affine-invariant subsets of the 2-torus
Osipenko, G.	Symbolic image and invariant measures of dynamical systems
Patrão, M.	Entropy and its variational principle for noncompact metric spaces

https://doi.org/10.1017/S0143385709001199 Published online by Cambridge University Press

Pikuła, R.	Enveloping semigroups of unipotent affine transformations of the torus
Pivato, M. and Yassawi, R.	Embedding Bratteli–Vershik systems in cellular automata
Qiao, J., Yin, Y. and Gao, J.	Feigenbaum Julia sets of singularities of free energy
Raja, C. R. E.	On the existence of ergodic automorphisms in ergodic $\mathbb{Z}^d$-actions on compact groups
Rechtman, A.	Existence of periodic orbits for geodesible vector fields on closed 3-manifolds
Rees, M.	Multiple equivalent matings with the aeroplane polynomial
Rempe, L.	The escaping set of the exponential
Roesch, P.	Cubic polynomials with a parabolic point
San Martin, L. A. B. and Seco, L.	Morse and Lyapunov spectra and dynamics on flag bundles
Sumi, H.	Dynamics of postcritically bounded polynomial semigroups III: classification of semi-hyperbolic semigroups and random Julia sets which are Jordan curves but not quasicircles
Sumi, H. and Urbański, M.	Real analyticity of Hausdorff dimension for expanding rational semigroups
Sun, P.	Zero entropy invariant measures for skew product diffeomorphisms
Thompson, D.	A thermodynamic definition of topological pressure for non-compact sets
Turaev, D.	Diffeomorphisms which cannot be topologically conjugate to diffeomorphisms of a higher smoothness
Xu, J. and Jiang, S.	Reducibility for a class of nonlinear quasi-periodic differential equations with degenerate equilibrium point under small perturbation
Xue, Y.-M. and Kamae, T.	Partitions by congruent sets and optimal positions
Yarmola, T.	Degenerate random perturbations of Anosov diffeomorphisms
Yokoyama, T.	Fixed points of certain Anosov maps on Riemannian manifolds
Zhao, X.	Non-singular Smale flows on three-dimensional manifolds and Whitehead torsion

INSTRUCTIONS FOR CONTRIBUTORS

Editorial Policy

The journal welcomes high quality contributions on topics closely related to dynamical systems and ergodic theory. Submissions in the field of differential geometry, number theory, operator algebra, differential, topological, symbolic, measurable dynamics and celestial and statistical mechanics are especially welcome. Expository survey papers and reviews of relevant books will be published from time to time.

Submission of typescripts

Two copies of the manuscript should be submitted to an executive or managing editor whose interest is closest to the material of their article. In case of doubt authors may send manuscripts to the Managing Editors at the University of Warwick. A paper may also be submitted electronically in postscript form as an attachment to an email, i.e. not in the body of an email. Please also send the TEX file. If you are unable to do this, please submit the manuscript in printed form. The editor in charge of the paper will acknowledge receipt of the paper. **It is important that authors inform the editor of any changes of postal and/or e.mail address** while their paper is under consideration.

The editor will send the manuscript to the referee electronically, if possible, and also airmail a copy to him/her. However, the editor can decide if the material is inappropriate for the journal and will also make the final decision regarding acceptance or rejection. Should you need further information you should communicate in the first instance with the editor in charge of your paper. In an attempt to decrease the journal's backlog an editor may decline a submission (without using the normal refereeing process) if he/she considers that a 'reasonable' referee might not recommend the paper sufficiently strongly, or (possibly) if the paper is more than 30 pages long. Such summary action, with its inherent risk of unfairness, seems preferable to introducing a moratorium (the only other alternative) and has the advantage that delayed negative decisions might be avoided. This policy will be reviewed at a later date.

Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Authors of articles published in the journal assign copyright to Cambridge University Press (with certain rights reserved) and you will receive a copyright assignment form for signature on acceptance of your paper.

The journal strongly recommends submission of accepted papers in LATEX using the ETDS LATEX class file. Papers that use this class file will be processed more efficiently. A LATEX2e file etds.cls is available via anonymous ftp from the Cambridge University Press site at ftp.cup.cam.ac.uk in the directory /pub/texarchive/journals/latex/etds-cls/. In case of difficulties with these files, please contact etds@sunrise-setting.co.uk or the Journal editorial office at etds@maths.warwick.ac.uk. Alternatively, authors may use "article" style.

On final acceptance of a paper, authors should send the LATEX source code on disc including the figures (line figures only) and all author-defined macro and style files, to the Managing Editors, together with a hard copy produced using the same file. Discs should be in Apple Mac or PC format and will not be returned. The publisher reserves the right to typeset any article by conventional means if the author's TEX code presents problems in production.

Typescript

Papers should be typed, double-spaced, on one side only and with generous margins. The pages must be numbered.

The first page should give the title, the author's name and institution, and a short abstract intelligible to mathematicians.

The title, while brief, must be informative (e.g. *A new proof of the ergodic theorem*, whereas *Some applications of a theorem of Birkhoff* would be useless).

Notation

It is important that mathematician's expressions are clear to a printer (who is not a mathematician). For instance, n_k (n sub k) is common usage, but avoid if possible using c sub n sub k. Fractions are generally best expressed by a solidus. Complicated exponents like $\exp\{z^2 \sin\theta/(1+y^2)\}$ should be shown in this and no other way.

In the typescript, italics, small capitals and capitals are specified by single, double and triple underlining. Bold-faced type is shown by wavy underlining.

It helps if displayed equations or statements which will be quoted later are numbered in order on the right of their line. They can then be referred to by, for example, 'from (7)'.

The author must enable the printer (if necessary by pencilled notes in the margin) to distinguish between similar symbols such as o, O, o, O, 0; x, X, $\times$; ϕ, Φ, $\varnothing$; l, 1; ε, $\in$; κ, k.

There is no need to underline Greek or script letters provided these are clearly typed. Any special symbols should be explained on a separate sheet of directions for the printer.

If an author wishes to mark the end of the proof of a theorem, the sign □ may be used.

Footnotes should be avoided.

Diagrams

Figures and drawings should be on separate sheets in black ink or produced by computer to comparable quality. Photocopies are acceptable only if they are as clear as the originals. *Symbols, legends and captions should be given on a transparent overlay*. Each text figure must be numbered as Figure 1, Figure 2, ... and its intended position clearly indicated in the typescript. The author's name in pencil must be on all separate sheets of diagrams. Figures should be used sparingly and only when they greatly clarify the exposition.

Tables

Tables should be numbered (above the table) and set out on separate sheets. Indicate the position of each in the text as for figures.

References

References should be collected at the end of the paper numbered in alphabetical order of the author's names. A reference to a book should give the title, in italics, and then in roman type the publisher's name and the place and year of publication:

[4] N. Dunford and J. T. Schwartz. *Linear Operators*. Part I. Wiley, New York, 1958.

A reference to a paper should give in italics the title of the periodical, the number of the volume and year, and the beginning and end pages of the paper. Titles should be abbreviated as in *Mathematical Reviews:*

[6] J. E. Littlewood. The 'pits effect' for functions in the unit circle. *J. Analyse Math.* **23** (1970), 236–268.

Proofs

Authors receive one set of proofs for correction. If excessive alterations to the original manuscript are requested after the paper has been typeset, the author will be charged the cost of resetting. For papers with more than one author the proofs are sent to the first named author unless the editor receives other instructions. **It is important that proofs are corrected and returned promptly.**

Offprints

No paper offprints are provided, but the corresponding author will be sent the pdf of the published article. Print offprints may be purchased at extra cost at proof stage.

This journal issue has been printed on FSC-certified paper and cover board. FSC is an independent, non-governmental, not-for-profit organization established to promote the responsible management of the world's forests. Please see www.fsc.org for information.

Ergodic theory and dynamical systems

VOLUME 30 PART 1 FEBRUARY 2010

CONTENTS

Baladi, V. and Smania, D. Alternative proofs of linear response for piecewise expanding unimodal maps 1

Barwell, A., Good, C., Knight, R. and Raines, B. E. A characterization of ω-limit sets in shift spaces 21

Bayart, F., Costakis, G. and Hadjiloucas, D. Topologically transitive skew-products of operators 33

Blokh, A., Buff, X., Chéritat, A. and Oversteegen, L. The solar Julia sets of basic quadratic Cremer polynomials 51

Bonatti, Ch., Gómez-Mont, X. and Vila-Freyer, R. Statistical behaviour of the leaves of Riccati foliations 67

Bowen, L. Invariant measures on the space of horofunctions of a word hyperbolic group 97

Breuillard, E. Equidistribution of dense subgroups on nilpotent Lie groups 131

Einsiedler, M. and Fish, A. Rigidity of measures invariant under the action of a multiplicative semigroup of polynomial growth on $\mathbb{T}$ 151

Haydn, N. and Vaienti, S. The Rényi entropy function and the large deviation of short return times 159

Huang, W., Ye, X. and Zhang, G. Lowering topological entropy over subsets 181

Iommi, G. Multifractal analysis of the Lyapunov exponent for the backward continued fraction map 211

Quas, A. and Wierdl, M. Rates of divergence of non-conventional ergodic averages 233

Thomsen, K. The homoclinic and heteroclinic C^*-algebras of a generalized one-dimensional solenoid 263

Wang, X. and Zhang, G. Constructing ergodic exponential maps with dense post-singular orbits 309

Papers to appear in forthcoming issues 317
