

Go Mobile

CJO Mobile (CJOm) is a streamlined
Cambridge Journals Online (CJO)
for smartphones and other
small mobile devices

- Use CJOm to access all journal content including *FirstView* articles which are published online ahead of print
- Access quickly and easily thanks to simplified design and low resolution images
- Register for content alerts or save searches and articles – they will be available on both CJO and CJOm
- Your device will be detected and automatically directed to CJOm via: journals.cambridge.org

Electricity and Magnetism Third Edition

Edward M. Purcell and David J. Morin

For 50 years, Edward M. Purcell's classic textbook has introduced students to the wonders of electricity and magnetism. The third edition has been brought up to date and is now in SI units. It features hundreds of new examples, problems and figures and contains discussions of real-life applications. The textbook covers all the standard introductory topics, such as electrostatics, magnetism, circuits, electromagnetic waves and electric and magnetic fields in matter. Taking a non-traditional approach, magnetism is derived as a relativistic effect. Mathematical concepts are introduced in parallel with the physics topics at hand, making the motivations clear. Macroscopic phenomena are derived rigorously from microscopic phenomena. With worked examples, hundreds of illustrations and nearly 600 end-of-chapter problems and exercises, this textbook is ideal for electricity and magnetism courses. Solutions to the exercises are available for instructors at www.cambridge.org/9781107014022.

\$80.00: Hardback: 978-1-107-01402-2: 864 pp.

Lectures on Quantum Mechanics

Steven Weinberg

Contents: Preface; Notation; 1. Historical introduction; 2. Particle states in a central potential; 3. General principles of quantum mechanics; 4. Spin; 5. Approximations for energy eigenstates; 6. Approximations for time-dependent problems; 7. Potential scattering; 8. General scattering theory; 9. The canonical formalism; 10. Charged particles in electromagnetic fields; 11. The quantum theory of radiation; 12. Entanglement; Index.

\$75.00: Hardback: 978-1-107-02872-2: 375 pp.

Modern Electrodynamics

Andrew Zangwill

An engaging writing style and a strong focus on the physics make this comprehensive, graduate-level textbook unique among existing classical electromagnetism textbooks. It features close to 120 worked examples, 80 applications boxes and nearly 600 end-of-chapter homework problems, with a solutions manual available to instructors at www.cambridge.org/Zangwill.

\$85.00: Hardback: 978-0-521-89697-9: 1,000 pp.

Revolutions in Twentieth-Century Physics

David J. Griffiths

The conceptual changes brought by modern physics are important, radical and fascinating, yet they are only vaguely understood by people working outside the field. Exploring the four pillars of modern physics – relativity, quantum mechanics, elementary particles and cosmology – this clear and lively account will interest anyone who has wondered what Einstein, Bohr, Schrödinger and Heisenberg were really talking about.

\$29.99: Paperback: 978-1-107-60217-5: 182 pp.

Prices subject to change.

Instructions for Authors

Editorial policy The journal welcomes submissions in any of the areas of plasma physics. Its scope includes experimental and theoretical work on basic plasma physics, the plasma physics of magnetic and inertial fusion, laser–plasma interactions, industrial plasmas, plasma devices and plasmas in space and astrophysics. This list is, of course, merely illustrative of the wide range of topics on which papers are invited, and is not intended to exclude any aspect of plasma physics that is not explicitly mentioned.

Authors are urged to ensure that their papers are written clearly and attractively, in order that their work will be readily accessible to readers. Manuscripts must be written in English. *Journal of Plasma Physics* employs a rigorous peer-review process whereby all submitted manuscripts are sent to recognized experts in their subjects for evaluation. The Editors' decision on the suitability of a manuscript for publication is final.

Submission of manuscripts Papers may be submitted to the Editor or any of the Associate Editors, preferably by email in pdf format. When a paper is accepted, the authors will be asked to supply source files in LaTeX or Word. Instructions for the preparation of these files and LaTeX style files are given in the Instructions for Contributors link at journals.cambridge.org/pla.

Incremental publishing and DOIs In order to make articles which have been accepted for publication in *Journal of Plasma Physics* available as quickly as possible, they are now published incrementally online (at Cambridge Journals Online; journals.cambridge.org) The online version is available as soon as author corrections have been completed and before the article appears in a printed issue. A reference is added to the first page of the article in the journal catchline. This is the DOI – Digital Object Identifier. This is a global publishers' standard. A unique DOI number is created for each published item. It can be used for citation purposes instead of volume, issue and page numbers. It therefore suits the early citation of articles which are published on the web before they have appeared in a printed issue. See journals.cambridge.org/pla.

Proof reading Only typographical or factual errors may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors.

Offprints Corresponding authors will receive a PDF of their article upon publication. Print offprints may be purchased from the publisher if ordered at first proof stage.

Copying This journal is registered with the Copyright Clearance Center, 222 Rosewood Drive, Danvers, MA 01923. Organizations in the USA who are also registered with C.C.C. may therefore copy material (beyond the limits permitted by sections 107 and 108 of US copyright law) subject to payment to C.C.C. of the per copy fee of \$16.00. This consent does not extend to multiple copying for promotional or commercial purposes. Code 0022–3778/2013 \$16.00.

ISI Tear Sheet Service, 3501 Market Street, Philadelphia, Pennsylvania 19104, USA, is authorized to supply single copies of separate articles for private use only.

Organizations authorized by the Copyright Licensing Agency may also copy material subject to the usual conditions.

For all other use, permission should be sought from Cambridge or the American Branch of Cambridge University Press.

JOURNAL OF PLASMA PHYSICS

VOLUME 79 • PART 1 • FEBRUARY 2013

Research Articles

- Effects of polarization force and fast electrons on DA shock waves in a strongly coupled dusty plasma
S. Pervin, S. S. Duha, M. Asaduzzaman and A. A. Mamun 1
- Evolution of FMS and Alfvén waves produced by the initial disturbance in the FMS waveguide
I. S. Dmitrienko 7
- Linear wave theory in magnetized quantum plasmas
Mubashar Iqbal 19
- Examination of aluminium and zinc plasmas from an inductive furnace by spectroscopy
K. T. A. L. Burm 25
- Drift wave instability in a radially bounded dusty magnetoplasma with parallel ion velocity shear
P. K. Shukla and M. Rosenberg 33
- Non-planar ion acoustic Gardner solitons in electron-positron-ion plasma with superthermal electrons and positrons
Deb Kumar Ghosh, Uday Narayan Ghosh and Prasanta Chatterjee 37
- Hydromagnetic waves and current relaxation: Damping at short wavelengths and small conductivity
Francisco E. M. Silveira 45
- Electro-physical property of plasma jet generated by burning chemicals as antenna
Yuan Zhong-Cai, Shi Jia-Ming, Wu Xiao-Po and Chen Zong-Shen 51
- Effect of the inter-grain attractive potential on lattice dynamics in complex plasmas
M. P. Verma, S. K. Mishra and M. S. Sodha 55
- Ion-acoustic shock waves in a degenerate dense plasma
M. S. Zobaer, N. Roy and A. A. Mamun 65
- Modeling and simulations of high-power microwave devices using the CHIPIC code
Jun Zhou, D. G. Liu and C. Liao 69
- Streamer propagation in non-uniform gaps at ambient atmospheric air pressures
Antonis P. Papadakis 87
- Effect of superthermal electrons on dust-acoustic shock waves in coupled dusty plasmas
Hamid Reza Pakzad and Mouloud Tribeche 97
- Dust acoustic instability with non-extensive distribution
San Qiu Liu and Hui Bin Qiu 105
- Influence of non-thermal shielding on the Ramsauer phenomena for the electron-atom-induced dipole scattering in Lorentzian plasmas
Dae-Han Ki and Young-Dae Jung 113
